

RTLS HEALTH SOLUTIONS GROUP TAGGING SERVICES

A hospital invests in a Real Time Location System (RTLS) in order to find equipment whenever needed, and perform necessary maintenance on a timely basis. The system was purchased to capture savings and generate ROI.

There are thousands of asset tags to place on moving equipment, across hundreds of thousands of square feet within a hospital. The tags must then be associated to the equipment in a new, unfamiliar piece of software. In addition, there are often hundreds of temperature monitoring tags on medication freezers and refrigerators, which require vital information to be uploaded into software. The problem is that a hospital typically is not staffed to accomplish this process in a timely fashion, to capture the necessary value to make the RTLS effective.

If the hospital chooses to self-install tags, the process could take many months. There is also the risk of tags being improperly installed and associated in the software.

That's where RTLS Health Solutions Group can help.

We will handle the implementation or update tags to an RTLS System.

The RTLS Health Solutions Group brings extensive experience to the job - we have over 40 combined years of experience in the RTLS space. We deliver impeccable speed to completion, and we perform the work accurately and correctly the first time.

The result - a very cost-effective solution.

It's time to utilize professionals to install tags and maintain your RTLS System, to immediately maximize the benefit, instead of putting an additional burden on hospital staff.

Let us handle the RTLS tag installation or updating for your hospital, and leave your staff free to focus on its primary task.

See how RTLS Health can help you capture the most from your RTLS investment.
