

SANIDERM

Keep it clean, keep it simple.

1. Keep the Saniderm bandage on for the time your artist recommends (typically 4 to 5 days)
2. To remove, do so in the shower with warm water. Peel the bandage back slowly in the direction of the hair growth. Avoid pulling upwards.
3. Wash your tattoo gently with mild soap and warm water, then pat dry with a clean paper towel.
4. apply the recommended lotion daily for the rest of the healing time to keep the tattoo moisturized

Notes:

- *Some fluid to accumulate under the bandage is normal.*
- *If necessary, replace the first bandage after 8 – 24 hours*
- *Do not wear the bandage longer than 7 days.*

Allergy notice:

Saniderm contains adhesive that may cause allergic reactions on sensitive skin. If irritation occurs, discontinue use and consult a physician if needed.
