

Come to the Experts...!

Reduce your Electricity & Gas consumption

EMPOWERING YOUR INDUSTRY WITH FREE SOLAR HOT WATER

Many industries are **large consumers of hot water and thermal energy**. Heating water for washing and sanitation can represent **40–80% of total energy costs**.

GREENBMG INC. designs and installs **high-efficiency solar heat recovery and smart energy systems** that drastically reduce the cost of producing hot water.

Guaranteed Savings

- ✓ +90% Electricity / Gas bills removed for three seasons: April to November
- ✓ 25%–40% Electricity / Gas bills removed during winter months
- ✓ Performance guaranteed: If the system does not achieve the agreed savings, you do not pay for the hot water — **we pay your gas / electricity bills.**

HOW OUR PROCESS WORKS

1. Energy Audit (1 day to 2 weeks)

We perform a **detailed analysis of your facility and measure your gas and electricity for hot water:**

- Gas consumption measurement (m³/day) / Electricity usage (kWh/day) analysis
- Hot water demand (m³)

This allows us to identify solar hot water system suitable to cover your daily hot water needs.

2. Professional Installation (1 – 2 weeks)

We have very good professional and licensed plumbers and electricians and make sure that the installation is designed for **minimal downtime**.

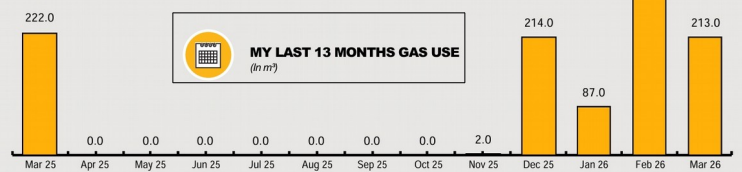

WHY YOU CHOOSE GREENBMG

- ✓ 90%+ MONTHLY BILLS REDUCTION: APRIL TO NOVEMBER
- ✓ 25% - 40% MONTHLY BILLS REDUCTION: DECEMBER TO MARCH
- ✓ Systems designed for **high-volume hot water consumers**
- ✓ Fully automatic system
- ✓ Hot water at 80 degrees centigrade (176 Fahrenheit)
- ✓ Systems sizes from 250 gal/day to 5000 gal/day
- ✓ Fast ROI: 4 years
- ✓ Reduced carbon footprint
- ✓ Smart monitoring and optimization

IDEAL FOR

- Commercial and residential laundries
- Car washes
- Hotels and restaurants
- Food processing plants

A pilot installation by GREENBMG in Waterloo proved that solar thermal can fully replace gas for domestic hot water during much of the year: from April to November 2025 the building's Enbridge bills show no gas was used for hot-water heating.
