

# GreenFining Superiority Example:

A Coker Naphtha Application

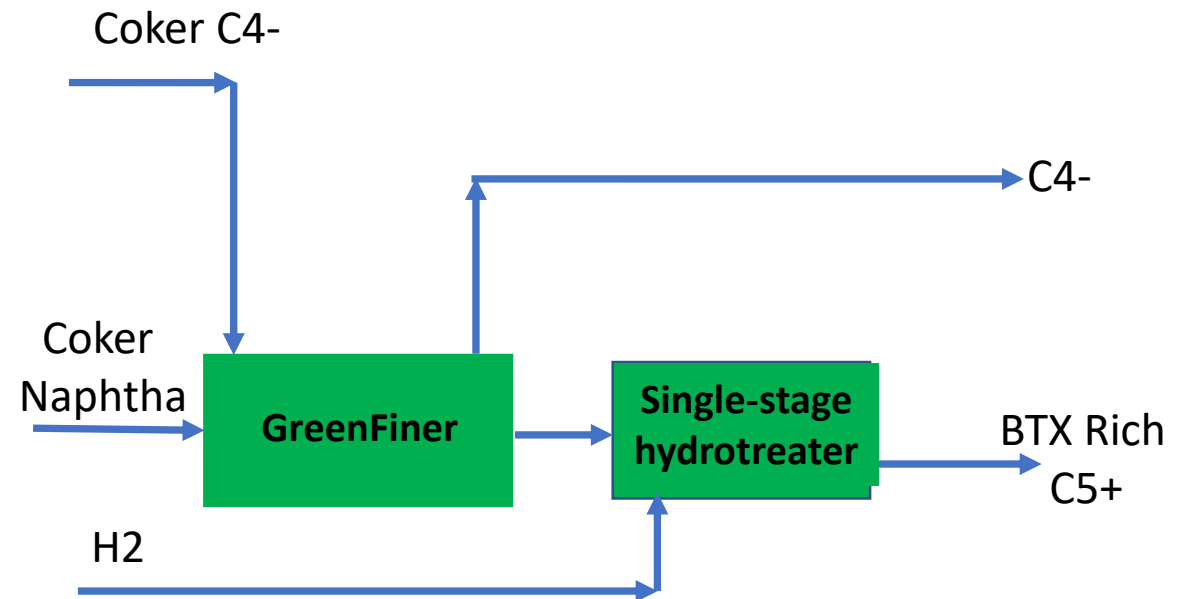

## Current Refining Capability

GreenFining eliminates majority of inefficiencies due to:

- **C5+ Yield loss**
- **H2 consumption**
- **Hydroprocessing heat release**

## Step-Change with GreenFining

GreenFining creates:

- **A higher quality BTX Rich C5+ with flexibility to make diesel**
- **Substantially less C4 – and fuel gas**
- **Cleaner burning fuel gas**
- **Longer cycle for the naphtha hydrotreater**
- **Room in reformer for processing virgin feeds**
