Video Display

PERFORMANCE CHECKLIST

A video display system provides visual content to support everything in your service or events you host. With this goal in mind, evaluate your system with this introductory checklist.

- [ ] *All seats have a quality viewing experience.*

- [ ] *The worship lyrics are easy for your congregation to read while standing up.*

- [ ] *The announcements, message graphics, and text are easy to read while seated.*

- [ ] *The display images are clear and bright, not dull or faded.*

- [ ] *No ambient light or lights washing out the image display.*

- [ ] *If your current viewing system is an LED wall display, the pixels are NOT visible, and there are no issues with the way your graphics/images look on the wall.*

- [ ] *People can see the preacher/leader and video display by looking directly ahead when seated. (People do not need to turn their heads or shift in their seats to see.)*

- [ ] *Worship lyrics are displayed at least ½ a second before the upcoming lyrics.*
