Paralytic Shellfish Toxins (PSTs) March 20, 2026

STAERL ID	Date Collected	Location	Sample Site	Species	*PST Result (µg/100 g)	Sample Type	Collector
260143	3/9/2026	Petersburg	Sandy Beach	Blue Mussel	NTD	whole	Petersburg Indian Association
260144	3/11/2026	Haines	Viking Cove	Blue Mussel ⁺	6	whole	Chilkoot Indian Association
260145	3/11/2026	Haines	Portage Cove	Blue Mussel ⁺	NTD	whole	Chilkoot Indian Association
260149	3/4/2026	Wrangell	Shoemaker Harbor	Blue Mussel	7	whole	Wrangell Cooperative Association

⁺Weight of organisms submitted for testing do not meet representative sampling criteria (<100g)

*PST results in red indicate values above FDA Action Level: 80 µg/100 g, NTD: No Toxins Detected, PSTs cause Paralytic Shellfish Poisoning (PSP)

The Southeast Alaska Tribal Ocean Research (SEATOR) network is comprised of 17 tribes in the Gulf of Alaska. SEATOR partners collect phytoplankton and shellfish samples from local beaches to track harmful algal blooms and marine biotoxin risk in their communities. Phytoplankton samples are analyzed by tribal environmental staff and shellfish samples are analyzed by the Sitka Tribe of Alaska Environmental Research Lab. These data can be found at seator.org/data. There is always risk when consuming wild shellfish. Toxins cannot be cooked, cleaned, or frozen out of shellfish. Toxins can vary between regions, beaches, and shellfish species.
