## Paralytic Shellfish Toxins (PSTs)

May 22, 2025

Page 1 of 2

STAERL ID	Date Collected	Location	Sample Site	Species	*PST Result (µg/100 g)	Sample Type	Collector
260331	5/17/2026	Skagway	Nahku Beach	Blue Mussel	101	whole	Skagway Traditional Council
260332	5/18/2026	Hydaburg	Hydaburg Beach	Butter Clam	51	whole	Hydaburg Cooperative Association
260334	5/18/2026	Yakutat	Ankau	Littleneck Clam	NTD	whole	Yakutat Tlingit Tribe
260335	5/18/2026	Yakutat	Ankau	Cockle	20	whole	Yakutat Tlingit Tribe
260336	5/18/2026	Yakutat	Ankau	Butter Clam	45	whole	Yakutat Tlingit Tribe
260338	5/18/2026	Yakutat	Puget Cove	Littleneck Clam	NTD	whole	Yakutat Tlingit Tribe
260339	5/18/2026	Yakutat	Puget Cove	Cockle <sup>+</sup>	10	whole	Yakutat Tlingit Tribe
260340	5/18/2026	Yakutat	Puget Cove	Butter Clam	36	whole	Yakutat Tlingit Tribe

<sup>+</sup>Weight of organisms submitted for testing do not meet representative sampling criteria (<100g)

\*PST results in red indicate values above FDA Action Level: 80 µg/100 g, NTD: No Toxins Detected, PSTs cause Paralytic Shellfish Poisoning (PSP)

The Southeast Alaska Tribal Ocean Research (SEATOR) network is comprised of 17 tribes in the Gulf of Alaska. SEATOR partners collect phytoplankton and shellfish samples from local beaches to track harmful algal blooms and marine biotoxin risk in their communities. Phytoplankton samples are analyzed by tribal environmental staff and shellfish samples are analyzed by the Sitka Tribe of Alaska Environmental Research Lab. These data can be found at [seator.org/data](http://seator.org/data). There is always risk when consuming wild shellfish. Toxins cannot be cooked, cleaned, or frozen out of shellfish. Toxins can vary between regions, beaches, and shellfish species.
