Paralytic Shellfish Toxins (PSTs) August 18, 2026

STAERL ID	Date Collected	Location	Sample Site	Species	*PST Result (µg/100 g)	Sample Type	Collector
260626	8/12/2026	Kodiak	South Trident Basin	Blue Mussel ⁺	49	whole	Kodiak Area Native Association
260630	8/12/2026	Hydaburg	Hydaburg Beach	Butter Clam	57	whole	Hydaburg Cooperative Association
260631	8/12/2026	Petersburg	Sandy Beach	Blue Mussel	122	whole	Petersburg Indian Association
260632	8/12/2026	Petersburg	Sandy Beach	Butter Clam	110	whole	Petersburg Indian Association

⁺Weight of organisms submitted for testing do not meet representative sampling criteria (<100g)

*PST results in red indicate values above FDA Action Level: 80 µg/100 g, NTD: No Toxins Detected, PSTs cause Paralytic Shellfish Poisoning (PSP)

The Southeast Alaska Tribal Ocean Research (SEATOR) network is comprised of 17 tribes in the Gulf of Alaska. SEATOR partners collect phytoplankton and shellfish samples from local beaches to track harmful algal blooms and marine biotoxin risk in their communities. Phytoplankton samples are analyzed by tribal environmental staff and shellfish samples are analyzed by the Sitka Tribe of Alaska Environmental Research Lab. These data can be found at seator.org/data. There is always risk when consuming wild shellfish. Toxins cannot be cooked, cleaned, or frozen out of shellfish. Toxins can vary between regions, beaches, and shellfish species.
