Paralytic Shellfish Toxins (PSTs)

February 3, 2023

STAERL ID	Date Collected	Location	Sample Site	Species	*PST Result (µg/100 g)	Sample Type	Collector
230052	1/30/2023	Petersburg	Sandy Beach	Blue Mussel	NTD	whole	Petersburg Indian Association
230054	1/27/2023	Klawock	City of Klawock Boat Launch	Blue Mussel	9	whole	Klawock Cooperative Association
230055	1/27/2023	Klawock	Big Salt	Blue Mussel	7	whole	Klawock Cooperative Association
230056	2/2/2023	Sitka	Starrigavan North	Blue Mussel	6	whole	Sitka Tribe of Alaska

*PST results in red indicate values above FDA Action Level: 80 µg/100 g, NTD: No Toxins Detected, PSTs cause Paralytic Shellfish Poisoning (PSP)

The Southeast Alaska Tribal Ocean Research (SEATOR) network is comprised of 17 tribes in the Gulf of Alaska. SEATOR partners collect phytoplankton and shellfish samples from local beaches to track harmful algal blooms and marine biotoxin risk in their communities. Phytoplankton samples are analyzed by tribal environmental staff and shellfish samples are analyzed by the Sitka Tribe of Alaska Environmental Research Lab. These data can be found at seator.org/data. There is always risk when consuming wild shellfish. Toxins cannot be cooked, cleaned, or frozen out of shellfish. Toxins can vary between regions, beaches, and shellfish species.
