

## CHEMICAL PEELS AFTERCARE

Whilst undergoing treatment please ensure you use an SPF of minimum 30 during the day and avoid high sun exposure.

If you are visiting a warmer climate a higher SPF will be required.

Please avoid sun beds whilst undergoing treatment and for at least 2 weeks before and 4 weeks after treatment has ended.

Avoid hot baths, hot water on the face, excessive sweating for at least 48hrs after the procedure.

- Depending on your skin's sensitivity, you may feel tingling, burning, itching, dryness, redness or tightness after a chemical peel, and see peeling or flaking within a week.

## RESULTS:

Most people see results instantly after a peel however it can take others up to 6 weeks, this depends on several factors such as skin type, condition, targeted treatment and age and how your skin reacts after the skin peel.

A course of sessions might be necessary to achieve the desired results.

Although rare, some clients may experience mild sloughing, producing some weeping or scabbing.

Do not pick at any cuts or flakes on the skin as in rare occasions this may cause scarring or discoloration.
