

# Compost Activator

Thank you for purchasing our Compost Activator! This will help enrich your homemade compost with a population of beneficial microbes and give you more worms - healthier plants make gardening easier! The process is simple and will only take a little bit of effort.

Gloves are not necessary but you can wear them if you wish.

**Please store with the cover off in a cool, dry place and use within 24 hrs of pick up to ensure microbe health.**

How To Use:

- Add contents to your pile and mix well with a garden fork or shovel
  
- **Finished compost**
  - Add contents to 1-2 litres of room temp water (if your water is treated, ask us for water Neutralizer), stir and pour contents all over the top of the pile. Mix well once per week until you add to your beds - keep damp and covered (leaving space at the bottom to ensure oxygen needs are met).
  
- **Long-term compost pile (slow compost)**
  - Add the contents to the pile and mix well. Make sure to mix weekly and add holes to ensure oxygen needs are met - keep lightly damp.
  
- **Short-term compost pile (fast compost)**
  - Add the contents to the pile and mix well as needed based on temperature and oxygen levels. We offer fast compost training and starter packages - contact us for more info.
  
- **Starting Compost**
  - Incorporate contents into your starter pile and mix weekly. If you are finding your compost isn't composting as quick as you'd like, contact us about our starter packages.
