

# Root Starter

Thank you for purchasing our Root Starter! This will encourage your roots deeper and help populate your soil ecosystem - healthier plants make gardening easier! The process is simple and will only take a little bit of effort.

Gloves are not necessary but you can wear them if you wish.

**Please store with the cover off in a cool, dry place and use within 24 hrs of pick up to ensure microbe health.**

How To Use:

- Sprinkle lightly as close to the root as you can without disturbing the root system. Watering in after application with room temperature water or rain will help move the microbes into the soil.
- **Established plants**
  - Topdress Root Starter under the canopy (not just around the trunk - be generous outwards towards the dripline) of the plant. Water well.
  - Add to 1-2 litres of water and gently pour under the canopy. (If you have treated water, ask us for Neturalizer)
- **Options when seeding**
  - Use it as a topdress, scattering lightly over the seeds.
  - Use it as a side dress, digging a parallel drill beside seeds and fill with Root Starter.
- **Options when transplanting**
  - Mix in a bucket with 1-2 litres of room temp. water and let roots sit for 1 hour before planting. Once planted, pour the remaining mixture gently on top of soil. (If you have treated water, ask us for Neturalizer)
  - Line dug holes with Root Starter (a handful for a shrub, a sprinkle for an annual transplant), then add more on top of soil.
