

Soil Pre-biotic

Thank you for purchasing our Soil Pre-biotic! This will help populate and feed your soil ecosystem to deliver you healthier plants and make gardening easier! The process is simple and will only take a little bit of effort.

Gloves are not necessary but you can wear them if you wish.

Please store with the lid off in a cool dry place and use within 24 hrs of pick up to ensure microbe health.

How To Use:

- Fill 5 gal bucket with room temperature water (leaving 3 inches at the top for mixing).
- Add approx. ½ teaspoon of the water Neutralizer provided (very important to those with treated water), stir and let sit for 3-5 minutes. The package of Nutralizer should allow for 5- 5gal buckets of prebiotic to be made.
- Place 1-2 handfuls of pre biotic into the compost bag, tying the bag suggley as to not let any escape into the water. Push the bag into the bucket of water, squeezing and moving the mesh bag in the water similar to how you would hand wash delicate clothing for two minutes. Remove the bag, rig it out gently as to not poke holes in your bag. Repeat this step with another 1-2 handfuls of pre biotic in the same water.
- Your solution is ready! You can apply with the bucket for concentrated areas, a watering can for medium sized areas or a sprayer for up to 1 acre coverage (We recommend you strain the solution with a simple kitchen strainer you can purchase from a dollar store to avoid nozzle blockage. Please ensure the sprayer has not been used for fungicides or herbicides in the past as this will kill the microbes).
- Apply the solution to your soil. Pouring lightly onto your 'problem' areas but also spreading it throughout the entire soil. Perfection is not necessary, this solution contains living microbes which will move to where they're happiest so the soil will slowly begin to re-populate and self-sustain!
- Once you've applied all your Pre-biotic, open the mesh bag and sprinkle the remaining soil onto your 'problem' areas or just on top of plants. Before storage turn the mesh bag inside out and rinse off ,hang up to allow it to fully dry between your applications.
- If you are enrolled in the 3 application program, keep your bucket clean for the next application.
- Please consider returning the mesh bag &/or bucket to our facility if you no longer have use for them. Waste reduction is our business goal and we would be happy to re-use these items to avoid them heading to the landfill.
