INSTALLATION

STEP 1:<ADD SUPPORT RODS TO CART BASE>

- Place support poles into holes

STEP 2 :<ADD WHEELS TO CART BASE>

- Flip over the bottom piece
- Be sure to use the washers and wrench as shown in this diagram - locate these items in the accessory box or bag

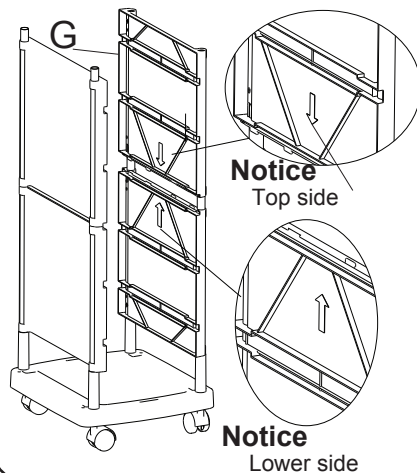

STEP3:<ADD PLASTIC RODS ONTO SUPPORT RODS>

- The plastic rods goes directly into the base of the cart over the support rods
- Add plastic rods to the base of cart to provide storage space for items

STEP 4 :<ADD CART SIDES>

- Flip the cart so wheels are on the floor
- Slide the 4 pieces onto the rods
- Make sure the panels are placed with textured sides on the outside of cart

INSTALLATION

STEP 5:<ADD TOP TRAY OF CART>

- Top tray into support rods

STEP 6:<ADD TOP ACCESSORY TRAYS>

- Slide the thin silver rods into each side accessory tray
- TIP to assembler: this is a unique feature of our product as the 2 side trays are designed to be raised and lowered as needed
- TIP: These trays may appear to be slightly loose after assembly - this movement and flexibility is by design to enable the ongoing movement of the side trays into up or down position by the user

STEP 7 :< PLACE SCREWS AND ADD TOP SCREW COVERS>

- Place screws in holes
- Screw into tray with the wrench curved end
- Small black caps are provided in the accessory bag/box to cover and hide the screws for aesthetics
- Insert the round covers into the holes until they click into place - covers go over 4 screw areas (See groove)

STEP 8:<ADD DRAWERS>

- Slide the drawers into the slots / grooves
- TIP: You can decide to use 4 or 5 of the drawers - flexible design if you need to leave one drawer out so that you can store taller products like bottles in one of the drawers
- TIP: Drawers open and slide out from both sides
- TIP: You can use one or two of the drawers to attach to the top tray to expand the surface area as needed (and then store it below when not in use as a top accessory)
