

ABAP corrections and optimizations are a critical path to your HANA migration. Be it, BW on HANA or your initiatives with S/4 HANA, **it is necessary to optimize any unsupported and underperforming ABAP code to leverage HANA capabilities.**

At Intelgraph some of the key questions we ask of our client's migrations are:

- Which of my ABAP code has functional issues with HANA migration?
- Which of my ABAP code needs optimization?
- Which of my business process have potential improvements for SAP HANA environment?
- How can I find all of this ABAP code easily and do the adaption efficiently?

Our HANA ABAP service gives you a comprehensive analysis of your ABAP code base and can provide inspection/audit results along with recommendations on how to fix each of them. Our approach to making your ABAP code ready for your HANA platform follows SAP's best practices and recommended tools along with our very own industry experts who have multiple HANA implementations.

Our Approach to ABAP Optimizations on HANA
