

FUELFIX – CLEAN FUEL TECHNOLOGY

What is Fuelfix?

Fuelfix is a Fuel expurgate – removes water from Diesel - it is totally compatible with Diesel and does not alter the fuel in any way.

What does Fuelfix do?

Fuelfix does 3 things:

1. Absorbs the water molecules in Diesel and forms a fuel-soluble, fully combustible liquid that remains in the Diesel and is evenly distributed throughout the body of fuel.
2. Prevents the formation of, and cleans resin (gum/gunk) build-up that forms in the fuel delivery system and fuel filters.
3. Prevents and eliminates the ageing of Diesel, water Corrosion, and related contamination.

What is the application of Fuelfix to Diesel fuel?

Fuelfix is applied to **fresh** Diesel at a ratio of 1-to-4000.

If the fuel is old or contamination is present/suspected, do a double application until the problem is solved. If free water is found or present, remove as much as possible and then do a double application as needed. Once the contamination has been resolved revert to normal dosage.

What are the benefits to using Fuelfix?

Better fuel efficiency.

Engine wear is significantly reduced.

Reduce excessive smoke emission.

Less unscheduled maintenance and downtime.

Fuel and fuel-injection systems are permanently maintained in pristine condition.

Are there any undesirable side effects with Fuelfix?

None whatsoever.

Will the use of Fuelfix affect vehicle warranties?

Warranties only cover material defects and poor workmanship. Fuelfix does not cause any breakdown or damage of any kind, and does not affect warranty cover

Result - FUELFIX works!
