

WEATHER

Bob Gaddis 1/16/2024

GLOBAL WARMING > CLIMATE CHANGE = WEATHER

Our weather is the result of the Sun and its activity, the Earth and how they rotate, rotate around each other with the time involved and our immense oceanic system with its extremely complex current system (here we have to add in our Moon). We need to add the Cosmic Rays that affect the Sun. Increases in carbon dioxide has always significantly lagged increases in warming. Water vapor is the most prevalent green-house gas.

The Global Warming activists only have poorly constructed computer models that provided false science. Computers cannot model the weather as it is far too complex. Incidentally, the Sun was not included in their modeling. Then they tried to destroy the “deniers” professionally and personally.

Climate Change is actually about anti-capitalism!

THE BENEFITS OF FOSSIL FUELS

In the small book noted below, Mr. Epstein makes a solid case for where we are today because of fossil fuels and he includes nuclear energy as also needed. Our health- longer life expectancies and combating diseases is evident. We can cool and heat so we are comfortable as we go about life. We have benefited from the Industrial Age. The poorer countries will suffer without the use of fossil fuels.

A solid case is built about the benefits of fossil fuels versus the vast limitations of so-called "Green Energy". We have had to subsidize "Green Energy" to try to make it work- our tax dollars.

All this versus the lies and deceptions of the "Global Warming" crowd. They do not mention how "dirty" Green Energy is- the mining for exotic minerals; the birds, our eagles, killed by the giant windmills and now we see dead whales. There are large areas of the landscape covered that they see as necessary. They use fossil fuels to mine and build their equipment. At night and windless days, they need fossil fuels.

I have seen a report that in the future, at a maximum, Green Energy can only provide about 65 percent of our needs. Not mentioned is the need for a greatly expanded transmission line system. Who pays for this? Actually, it all comes out of our pockets.

The Green Energy crowd only want to feel good in their minds, not caring about the effects where they want things to go. Germany has been forced to back off. They are building coal plants again. Green Energy only benefits our enemies.

"Fossil Fuels Improve the Planet"
Alex Epstein

GLOBAL WARMING HIGHLIGHTS

- 710 MYA "Snowball Earth" – whole planet covered – 90% extinction.
- 640 MYA Another snowball Earth.
- 360 MYA Oxygen @20% lower than today.
- 270 MYA Oxygen rich environment.
- 251 MYA Siberia massive volcanic eruptions, lasting @ 1 MY – poison gasses released, 95% of species perished. Climate was hot.
- 65 MYA You know what happened!
- 2 MYA Ice age began – re: our North America.
- 950-1250 "Medieval Warm Period" – north Atlantic. Possible causes: increased solar activity, decreased volcanic activity and changes in ocean circulation.
- Early 14th century thru middle 19th century – "Little Ice Age".
- 1970s Some worried about another "Little Ice Age".

WEATHER 2023

Back in December, 2009, I signed the published petition for the "Global Warming Petition Project". This petition stated:

"We urge the United States government to reject the global warming agreement that was written in Kyoto, Japan in December, 1997, and any other similar proposals. The proposal limits on greenhouse gases would harm the environment, hinder the advance of science and technology, and damage the health and welfare of mankind.

There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth."

Previously, more than 30,000 American scientists had signed this petition.

At that time, I had 31 years of geological oil & gas exploration and development. I was aware of the damage "Global Warming" advocates was causing. They tried to destroy the "Deniers" professionally and personally.

I now have over 47 years of experience and my file is filled with "true" weather science. I continue to read and collect the truth!

Going Quietly into the Night?

By LEE C. GERHARD

Lee C. Gerhard is an honorary member of the AAPG, senior scientist emeritus at the University of Kansas and past director and state geologist at the Kansas Geological Survey. He can be contacted at leegtn37@gmail.com.

I am amazed that the members of

AAPG go so quietly into night as unfounded fears of carbon dioxide drive their careers, jobs and companies into oblivion. Geologists own Earth Time. Why aren't you loudly using Earth temperature history to oblivate the already falsified anthropogenic climate panic? I don't know what the social agenda is that underlies the panic, but I do know this: It's been getting colder for 4,000 years.

If only climate scientists understood recent history they wouldn't depend on their theory-biased computer models to forecast dire warming. The minuscule temperature rise we have recently experienced, whatever the cause, is inconsequential noise in the context of temperature history. The professed need to restrict warming to 1.5 or 2.0 degrees Celsius is an artificial construct, with no scientific basis.

What ice core data tell us is that we are nearly 3 degrees C colder than where we were 4,000 years ago, and that temperatures are just now climbing out of the longest coldest time of the last 10,000 years. A deeper dive into geologic history shows that carbon dioxide levels today are a shadow of past concentrations. Today's concentrations are nearly the lowest ever since plant life began so many millions of years ago. Any global increase in carbon dioxide will be beneficial and have nearly no impact on future temperature. We can hope that there is continued warming, because cold kills.

Why, then, are so many trying to demonize fossil fuels? The very fuels that allow them the leisure to worry about climate change instead of struggling to stay alive? Global society is absolutely dependent upon cheap and plentiful energy for its survival. Why would some demand that society retreat from useful energy sources to bring back mass starvation, poverty and horse-drawn buggies?

To dream of a utopian world is admirable, but to inflict suffering upon society through ignorance of science is deplorable. Ignoring the meticulous scientific contributions of eminent physical scientists such as Alley, Davis, Dansgaard and Lindzen deprives humanity of its precious innovation and creativity only for ideology.

The public is "protected" from empirical data by legacy and social media censors. We thus suffer the consequences of unwarranted regulatory intrusions into daily life, whether it be restrictions on heating, air conditioning, dishwashers and stoves or the increased price and availability of electricity.

There is no global climate crisis. There is a global knowledge crisis. **E**

Editor's Note: As in any commentary published in the AAPG EXPLORER, the opinions expressed here are the author's own and do not necessarily reflect those of the EXPLORER staff or of AAPG collectively, nor its leaders.

To dream of a utopian world is admirable, but to inflict suffering upon society through ignorance of science is deplorable.
