

SSSCAR™

NON NEGOTIABLE • SCAR • PREVENTION • REDUCTION

SCAR, SURGICAL, STRIAE, CONTRACTURE ACNE RESTORE

SSSCAR is designed to treat compromised skin and existing scars to aid faster recovery and a reduction in the appearance of redness and discolouration. Scars and stretch marks become visibly softened and flattened.

SSSCAR can use immediately following aesthetic and medical procedures including microneedling, incisions, tattoo application/removal and skin resurfacing. May be suitable for burns scars. Easy to apply, non-sticky, rapid drying, transparent and odorless.

Directions for use:

Keep fresh wound clean using Dp Dermaceuticals CLINIPREP. Apply a thin layer of SSSCAR to affected areas following procedures. Or apply directly on existing scars or stretch marks as daily. Once dry, SSSCAR can be covered by Dp Dermaceuticals COVER RECOVER (Camouflage/SPF 30) or recommended treatment wound dressing.

SSSCAR aids Striae (Stretch Marks) by softening and flattening stretch marks, reduces redness and associated discoloration, relieves the itching and discomfort of stretch marks.

For Keloids or atrophic scarring SSSCAR allows the skin to normalize the collagen synthesis cycle.

Silicone Gel (polysiloxanes) is well documented for the safe and effective treatment of scars.
