

PCS: PROTECTING OUR INFRASTRUCTURE

PCS has established an UNMATCHED measurable process for vulnerability assessments – this P.A.S.T.SM process allows tangible tracking and mitigations that does not otherwise exist.

As shown through our Nation’s security assessments and increasing threat trends, our Critical Infrastructure is exceptionally vulnerable, and current Resiliency is insufficient.

Layered & professional 3rd party assessments, mitigation emplacements and vulnerability monitoring are a non-negotiable for any CI sector entity responsibly concerned about effective Resiliency, especially the Energy Sector.

WE COME ALONGSIDE YOUR EXISTING MECHANISMS TO CALIBRATE AND IMPROVE THEM LONG-TERM THROUGH:

1 UNMATCHED: VULNERABILITY ANALYSIS

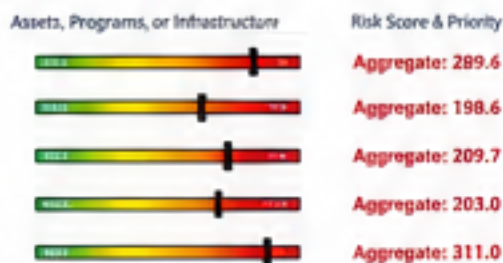

- ❖ All-Hazards and All-Domains Considered.
- ❖ Means EVERY aspect of threat and environment is studied and captured.

PCS achieves max-effectiveness by considering “all domains” or “all-hazards” where both manmade and natural hazards are considered in tandem to analyze their “convergence” creating a holistic analytical picture to mitigate against – no one else does this!

2 UNMATCHED: RISK BASED QUANTIFICATION

- ❖ All findings are converted to a quantifiable system, allowing measuring, tracking, and prioritization.
- ❖ Means it is TANGIBLE, not words thrown on a page & enables risk tolerance decisions.

3 UNMATCHED: MITIGATION SOLUTIONS

- ❖ Vulnerabilities are matched with practical & calibrated mitigations from across a trusted and proven global network.
- ❖ Means it is SENSIBLE, economical, and validated.

4 UNMATCHED: ROI ANALYSIS

- ❖ The P.A.S.T.SM process and measurements allows actual ROI analysis and findings to inform decisions and planning.
- ❖ Means mitigations are given RETURNS that validate and allows long-term goal setting.

Initial Investment / Annualized	Critical System Impact	Mitigation Benefit (%)	ROI Ratio*
7.3 / 10	Power New Generation	160 to 1.2	13.6
6.7 / 10	Multiple Break Fix	250 to 1.0	17.6
7.6 / 10	Multiple Break Fix	450 to 7.4	37.9

* 5-YR ROI

PCS has an unmatched methodology and proven record in hardening lifeline critical infrastructure, with a focus on Energy Sector Distribution entities, along with Production, across the U.S.

How Does it Start? PCS is retained for a 90-day Initial Entry Assessment to determine your strengths & gaps and produce a Glidepath of options for your Security & Resiliency Way Ahead.

Your Way Ahead will include not just potential PCS help (commitment-free), but how to Vertically Integrate across existing stakeholders and resources in a precision manner.

NO OTHER private entity does this.

PCS does NOT replace your existing mechanisms; we calibrate and augment!

...Increasing Risks...Decreasing Resources...
You HAVE to Be Precise through:

- ▶ “All-Hazard” Threat Layered Analysis
- ▶ “Vertical Integration” Across Sector Stakeholders
- ▶ Identify ALL Threats, Including High-Impact Low-Probability (“HILP”)
- ▶ Precision, Effective, and Efficient Common-Sense Mitigation Findings
- ▶ Systems-Based Domino Effect Considerations
- ▶ Broad SME Network for All Mitigation Needs
- ▶ Leader In & With Top-CI Resiliency Efforts & Organizations Globally

Contact us today to find a tailored solution.
Its not too late – YET.
