

MA-405

PORTABLE MOISTURE TESTER

High frequency portable moisture tester which measures moisture to the inside of the kernel. This method allows for accurate moisture measurements of hot or cold grains. MA-405 is suitable for all grains published by Canadian Grain Commission (CGC) and the United States Department of Agriculture (USDA).

Get the App

Download our app to access full control of your MA-405.

Features:

View, save, and share your results online directly from another smartphone.

Review previous results including the location where the sample is taken.

Benefits and features:

- Built in scale, thermometer, and charts allow for instant moisture, test weight, and temperature readings.
- Weighing of the grain is no longer required to run a sample, simply fill the universal cup for all grain types.
- The MA-405 is light, portable, and rechargeable up to 10 hours of continuous use on battery life.
- Analyze hot or cold grains with temperature range of -10°C to 71°C (14°F to 160°F)
- Print results on the spot with the built-in thermal printer, save your results on a USB Drive, or check your tester "previous logs" for the history of most recent tests.
- Store up to 500 results on the free application (available on google play and app store).
