

**Summary**

The purpose of this emergency plan is to give parents and students threats to discuss and plan. This plan is based on one month. The theory is based on the idea if there is a local or regional disaster students will most likely relocate to their family home and return to university when the disaster subsides. Examples could be a hurricane evacuation, large wildfire, or major earthquake. All of these need to be discussed before hand with family as to how the student will evacuate when airlines and / or primary roads are not usable. A communication plan needs to be discussed as well. If cell phones and internet are down how will the student and parents communicate? If long range communication is not an option, what is the plan?
