

# Anode Skid

## Product Specification Sheet

### Description

Anode skids are used to prevent corrosion of subsea assets, increasing their operational lifespan. The specific anode requirements will be defined by us based on client provided information to suit the environment.

Connection handle is standard but can be modified to suit asset it is being connected to. Dimensions can be altered to accommodate installation in confined spaces or more open areas.

## Key Specifications

### Length

2025 mm

### Width

700 mm

### Height

516 mm

### Weight in Air

178 kg

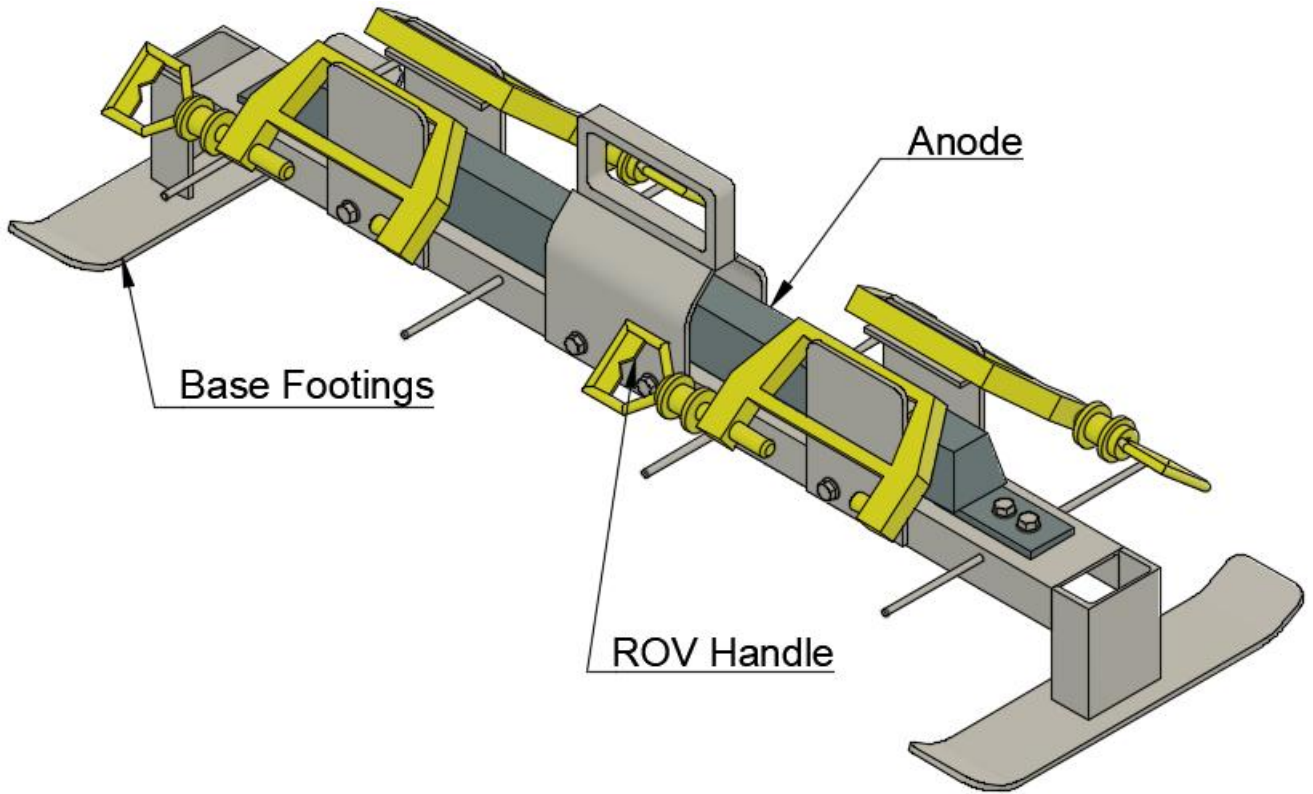

### Weight in Water

155 kg

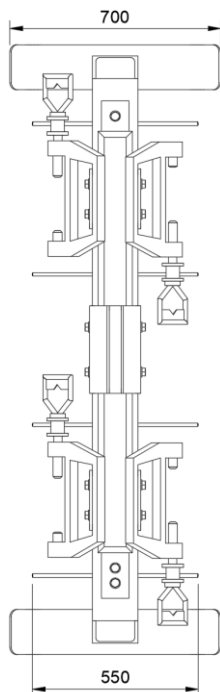

## Additional Points

- Main Structure - S355 Type Steel
- Painted Yellow (RAL 1004) Norsok M-501, System 1
