I trust this message finds you well. My name is David Prestridge, and I am the Owner at DP Data Solutions LLC. I am writing to familiarize you with our service offerings, which I believe can significantly enhance your organization's data management and reporting capabilities.

In today's business environment, engaging a consultant to extend your team's resources may be a more cost-effective strategy, providing quicker results than hiring a full-time employee. This approach ensures access to the necessary skill set and experience, while also allowing for the flexibility to conclude the consulting engagement at the project's end. Of course, with a consultant you eliminate the need for time-consuming recruitment and onboarding processes, eliminate the need for employer paid benefits and provides quicker project turnaround. An experienced consultant can also provide project management services along with unbiased recommendations.

At DP Data Solutions, we provide innovative data solutions tailored to meet the specific needs of our clients. We will help you '*discover your data with confidence*.' Our services encompass:

1. **Microsoft Power Platform Solutions**: Utilizing the Microsoft Power Platform (Power BI, Power Apps, Power Automate) to develop and manage applications, workflows, and reporting tools, thereby maximizing the impact of your business data.

2. **Database Design**: Crafting efficient, secure, and user-friendly database designs that facilitate optimal data storage, reporting, and compliance.

3. **SQL Server Optimization**: Enhancing the performance and security of your existing SQL Server databases to ensure rapid and efficient data retrieval.

4. **Technical Documentation**: Producing comprehensive and precise documentation for your processes, databases, and code, ensuring clarity and adherence to industry standards.

5. **Data Analytics**: Employing tools such as SQL Server Reporting Services and Power BI to convert your data into actionable insights through customized reports and dashboards.

6. **Integration Services**: Designing and implementing processes to transfer and utilize data across various sources, using both Legacy SSIS and Azure Data Factory.

7. **HL7 Integrations**: Designing, implementing, and maintaining interfaces for communication between disparate healthcare systems, such as electronic health records (EHRs), laboratory information systems (LIS), and other clinical applications using the Health Level Seven (HL7) standard.

8. **Network Design**: Providing optimal solutions for network connectivity, leveraging our extensive IT expertise to connect all your devices effectively. We proactively partner with industry leaders to ensure your networks' performance.

Understanding that each organization faces unique challenges and has distinct objectives, we are committed to delivering customized solutions that drive success. We dedicate ourselves to understanding your needs and providing innovative solutions that yield measurable results.

I would welcome the opportunity to discuss how DP Data Solutions LLC can assist your organization in achieving its data-related goals. Please feel free to contact me at 205.200.5713 or david@dpdatasolutions.com to arrange a meeting or to learn more about our services. I can also provide a list of references if so desired. We look forward to the possibility of collaborating with you and contributing to your organization's success.

Yours sincerely,

David Prestridge
