Recent studies of the industrial flow market in N. America are suggesting massive growth in the use of Magnetic Flow Meters through this decade.

Rising interest in highly accurate and precise equipment for flow calibration is driving growth of intelligent meters. This is happening in part to the emerging on-board diagnostics of transmitters being developed and improved.

Increased manufacturer investments in Mag Meters has widened their use as a potential solution for tough applications.

Join us for a Webinar discussing the advancements, applications and benefits of Magnetic Flow Meters!

Gain valuable knowledge on solutions for your flow applications!
