recommendation

Based on data supplied by the FIG Safety Symposium, American Athletic, Inc. **STRONGLY RECOMMENDS** that horizontal bars and collars be replaced every three years to reduce the possibility of bar breakage. The newer moves being performed are applying greater impact loads and vibrations to the bar and its support structure.

SINGLE BAR TRAINERS

"It's been a battle for many years to obtain a piece of equipment to place over a training pit that would benefit both women's and men's gymnasts at and up to the elite level without taking up extra space and being able to withstand the G-forces endured by elite level athletes and skills. The AAI® Premier Single rail has done just that. We are 100% happy and satisfied with this piece of equipment that AAI® has produced!"

IN-GROUND TRAINING PITS

From beginning to advanced techniques, AAI® pits provide the soft landing area required for today's advanced gymnastics. Gymnastic pits function as dismount landing areas which provide extra cushioning when learning new skills, in case of falls from the equipment. Custom foam pits are designed to fit your exacting specifications. To outfit your facility, contact your local AAI dealer or call 800.247.3978 for details.

PIT EDGING

Made from the same great materials as our carpet bonded foam and used for padded edging in your in-ground training pits.

LOOSE FOAM

IN-GROUND TRAINING PITS:

- Traditionally loose foam pits are 6-8' deep filled with foam blocks
- Compatible with most AAI® apparatus
- Pit edging will cover 14" (35.5cm) of the concrete floor and 22" (56cm) inside the in-ground pit wall consists of cross-link polyethylene foam bonded to a low pile blue carpet with finished edges in sections of 2" (5cm) thick and 6' (1.8m) length

FOAM CUBES

Provides a combination of softness, durability and safe landing.

- Foam cubes fill rate: 75% minimum
- Available in 6" x 6" x 6" & 8" x 8" x 8" sizes (15 x 15 x 15cm & 20 x 20 x 20cm)
- Standard blue with other color options available

TRAMPOLINE BED

• A trampoline bed mounted 2', (61cm) above the bottom of the pit which provides support for loose foam cubes as well as floor clearance

FOAM PYLONS

For added safety & longevity AAI® foam modules can be placed below the trampoline bed providing additional support.

- Foam Pylons are 2' x 2' x 2' in shape (61 x 61 x 61cm)
- Help minimize sag over time
- Typically spaced 6' (183cm) on center (3' (91cm) from walls)

MODULAR

MODULAR IN-GROUND PITS:

- Helps athlete gain confidence from loose foam to landing mat
- Pit edging will cover 14" of the concrete floor and 22" inside the in-ground pit wall consists of cross-link polyethylene foam bonded to a low pile blue carpet with finished edges in sections of 2" thick and 6' (183cm) length

TOP SKILL CUSHION

- 18 oz. vinyl cover, mesh top and/or sides
- Top mat can be rotated to double life span
- Top mat can be flush with, above, or below the floor surface
- Mesh Top and/or sides allow the pit to breathe during impact

FOAM PYLONS

- Foam Pylons vary in size depending on pit size
- Increases cushioning for training
- Bare base foam modules can minimize cost
- Customized foam firmness upon request

WARNING

No pit of any kind can completely eliminate the possibility of a serious neck or back injury. Every effort must be taken to avoid landing on the head or neck, especially going forward. Careful gymnastic progression must be followed to avoid dangerous landings on the neck.

AIRTRACK

AIR FLOOR

Height: 4" | Width: 6.5' | Lengths: 10', 20', 26', 33', 39' or 49'

- The AirFloor works perfectly for all floor exercise and tumbling passes which translates to less impact on the body and higher jumps.
- The AirFloor can be used on a regular solid surface, foam mat or on a spring floor depending on the type of sports, level and age. Be careful using the AirFloor on a solid surface: heavier users may bottom out when practicing high jumps. This can be prevented by adding a foam mat on top or underneath the AirFloor.
- Pressure is easily customized within seconds, while inflating and deflating is done in a single minute.
- After inflation, the AirFloor will maintain its pressure for hours.

AIR TRACK P2

Height: 8" | Width: 6.5' | Lengths: 20', 26', 33', 39' or 49'

- The AirTrack P2 is used best for takeoff purposes, not for landings unless 2 or more jumps are connected.
- Jumps can be repeated more often with less chance of overuse injuries than on traditional training equipment.
- The AirTrack P2 is relatively light and easily setup on any floor.
- Pressure is easily customized within seconds, while inflating and deflating is done within 4 minutes.
- After inflation, the AirTrack will maintain its pressure for hours without the noise of a constant blower.

AIR TRACK P3

Height: 13" | Width: 6.5' & 9.2' | Lengths: 20', 26', 33', 39' & 49'

- Soft impact and maximum jump heights is what the P3 provides. Combining the P3 with foam blocks, landing mats or other air products greatly increases the amount of training possibilities.
- The AirTrack P3 is thick enough to prevent elite level power tumblers from bottoming out, while being soft enough for pre-rec and recreational athletes.
- The rebound on air makes you jump higher and grants more precious air-time to work on your technique.
- The AirTrack P3 can be easily setup on any floor.
- Pressure is easily customized within seconds, while inflating and deflating is done within 4 minutes.
- After inflation, the AirTrack will maintain its pressure for hours without the noise of a constant blower.
