

MINERALS UNLIMITED
MINERAL SPECIES IN STOCK -- LIST 2019

This list is an alphabetical listing of all mineral species in stock at the time of this printing. Email or write if you need more information about any of the un-priced species. Items with an asterisk * are from the "Type" or original locality.

WHAT HAS CHANGED: The **2.5cm (1") size**, as well as most other sizes shown in this list, **is generally the size of the matrix**, not necessarily the size of the species, with exceptions indicating (**micro**) with a matrix size given. **Sizes with a dash** (i.e. 2-3cm) indicates a range of sizes possible, and the best one will be selected from that range. If XL (or xl) is indicated, it may mean a crystal/crystal portion in the size indicated. There *may* be other size/price options available, ask if I haven't listed what you want.

Some species show more than one price: **the higher price indicates another quality** or possibly a different locality, not a larger size.

Vial is 5/8-dram (about 1/2x1/2-inch area, but a smaller opening.) Where "up" follows a price, other quality specimens are available, please ask for more details.

Some mineral groups have been cross-referenced, i.e., TOURMALINE, GARNET, QUARTZ, etc. For example, while the price for almandine will be found under GARNET, you will be directed to the GARNET section if you look up almandine—there you will find "Almandine—see GARNET."

Amphiboles, pyroxenes, micas, feldspars and such are listed only under their mineral names, i.e., ALBITE, BIOTITE, etc. Some equivalent names are indicated where the older name may be more familiar, i.e., Niccolite=NICKELINE. Most varietal names are followed by the species name in parentheses, i.e., MOONSTONE (Albite).

SHIPPING COSTS ARE EXTRA. \$10.00 minimum will probably cover up to ten specimens. More specimens = more shipping. I cannot estimate, as weight determines cost. I refund all extra you send, and bill for more if you under-estimate. California residents add 8.25% sales tax.

TERMINOLOGY: A note about terms used in our lists. Xl or xl (crystal)= usually some or all of the terminal end is present. The termination may be good, or distorted, or etched, but is there. XL prism or prism= half or more of the sides of the crystal are present, without a terminal end. XL section= not enough of the form is present to call it a crystal or a prism, but some form is generally visible (but not always.) Chunk= no xl form, just a broken piece (also see "mass"). Mass or massive = no XL form, not even under magnification. Xline or xline mass= may show xline form, but not distinct xls or prisms. Xlized, Xline = shows crystallization, but not distinct or complete xls.

ABBREVIATIONS USED in this list: (F) = fluorescent or fluorescence M/M or M/MP = micromount potential Ps. = pseudomorph (after) fic = fines in capsule
 xlized = crystallized SW = short wave ultra violet LW = long wave ultra violet var. or v. = variety (R) = radioactive mm = millimeter
 grp(s) = group(s) fiv = fines in vial incl. = inclusions cm = centimeter (Z) = Zeolite Group **XL or xl = crystal or crystal section**
