

When using Smart DGT Boards that are connected to 'DGT Live' software:

When you are done with your game **IMMEDIATELY** before you do something else, pause your clock!
Now we are going to tell DGT Live what the result of the game was using the position on the board of the two kings:

1. **If White won**, place the white king on the **e4** square and the black king on the **d5** square.
2. **If Black one**, place the black king on the **e5** square and the white king on the **d4** square.
3. **If Draw**, place the white king on the e4 square and the black king on the e5 square.
4. Wait a couple of seconds so that the DGT Live software can collect this information and update the result for your game.
5. You can now either move all the pieces back to their starting squares, or, make moves and quietly skittle a bit with your opponent and 'then' move the pieces back to their starting squares.
