

Structural Underlayment for Elevated Decks

16"x18"x1 1/2"

People are growing tired of maintaining and rebuilding their wooden decks. Stain, paint, and waterproof, repeat at least once a year. Every time you have to stain or paint and waterproof your deck, you are putting money into it that you will probably not get back in the future. But, what can you do? Whether you are remodeling or building a new deck, StoneDeks System® has the solution that will enable you to take your ordinary traditional wood deck and make it extraordinary!

StoneDeks System SilcaGrate®, an American-made product made with recycled material, is ideal for applications where decking materials like wood lumber or composite lumber would have otherwise been the only choice. When connected to wood floor joists, SilcaGrate® grids provide a substructure (sub-floor) for a wide variety of decking materials: stone, brick pavers, slate, travertine pavers, porcelain, marble or granite. Because it is engineered for strength and easy installation, this durable *outdoor flooring* makes it possible for residential do it yourselfers, as well as commercial architects, designers and builders, to create a new, exciting outdoor living space! At the end of the day, **StoneDeks System** enhances your outdoor living experience with an attractive, long lasting, low maintenance **stone deck or patio**.
