

Exit AutoScan (bottom right corner by the tray – right click on AutoScan icon and click exit)

In Win 7, 8 or 10 Go to: c:\ProgramData\KeyScan\ks810P\control (hidden folder)

In XP go to: C:\Documents and Settings\All Users\Application Data\KeyScan\KS810P\Control

Create a backup copy to the file SG.ini

Open the SG.ini with notepad

Go down to: [TWAINdriver]

The file will look like this:

```
[TWAINdriver]
CompatINIVer= 8.00.01    // Compatible with SG.INI ver # and above

EnableLog= FALSE
LogFileNames= '.\Twain_DataSource_Log.txt'

TWUsrLogMode=0          // 0- no log, 1- log to file 2- log to display 3-
log both file and display
TWUsrLogFileName='.\'Twain_User_Log.txt'

PreviewAlwaysOn=5      // preview display => SHOW_MINIMIZED = 2 , SHOW = 5
```

On the line

```
PreviewAlwaysOn=5      // preview display => SHOW_MINIMIZED = 2 , SHOW = 5
```

Change the PreviewAlwaysOn=5 to PreviewAlwaysOn=2

So the line will look like

```
PreviewAlwaysOn=2      // preview display => SHOW_MINIMIZED = 2 , SHOW = 5
```

Save the file,

Restart Paterson EagleSoft

And try to scan.
