# Don't Let Weight Loss Hurdles Stand In Your Way!

PROTHIN™ is designed to help you overcome the challenges of any weight management program. With any new weight loss effort, changes in mood, energy, and hunger may arise from your body adjusting to the dietary stress and nutrient changes associated with your program. This adjustment period may present some challenges as the body, at a cellular level, communicates to the brain to give up and return to your previous habits.

PROTHIN™ has been used successfully by thousands of doctors and their patients for over 25 years. PROTHIN™ is presented with the understanding of the physical and psychological challenges associated with weight management.

Each daily packet contains a scientifically formulated and tested set of nutrients, antioxidants, and a broad spectrum of vitamins and minerals that are designed to assist in maintaining good health, reducing hunger, stopping cravings, helping to metabolize fats and carbohydrates, and increasing energy levels while losing weight!

# A Comprehensive Approach

## Head Hunger: L-Phenylalanine

L-Phenylalanine is an essential amino acid that is converted to norepinephrine, which plays an important role as a neurotransmitter. These neurotransmitters provide feelings of joy, ambition, alertness, and can reduce hunger. L-Phenylalanine has been used in cases of depression, replacing antidepressants very successfully. Phenylalanine usually takes several hours to be converted to norepinephrine in the brain, so the first effects may not be noticeable until some time has passed.

## Stomach Hunger: Quick-Fill Capsule

A weight loss aid that contains vitamins, minerals and a bulking agent to create a feeling of fullness and help curb the appetite. Chromium, an essential trace mineral, has been added to this combination to aid in the metabolism of sugar and other carbohydrates.

## Energy Tablet

Korean Ginseng rejuvenates, restores vigor, soothes the intestinal tract, and purifies the blood. Guarana gives high energy and elevates mood.

Potassium Gluconate helps regulate water balance in the body. Bee Pollen is a natural source of energy, and is considered the most complete energy food. Niacin, part of the B-Complex vitamins, assists in metabolizing carbohydrates, fats and proteins. Folic acid also assists in the breakdown of carbohydrates and fats.

## Nutritional Support: Cal Mag

Calcium Carbonate contains the greatest amounts of calcium and is more easily absorbed when taken with a meal. Calcium supports healthy bones and teeth, heart function, nerve transmission and cellular energy production.

Magnesium Oxide is an essential macromineral that increases the effectiveness of calcium, yet on its own is a catalyst for food metabolism and the release of energy. It is also a cofactor in the formation of RNA/DNA, enzyme activation and nerve function.
