

MesoDerm™

Transdermal Fat Reduction Cream

A topical enhancement cream formulated with some of the same ingredients that are commonly used in micro-needle therapies such as Mesotherapy and LipoDissolve.

Key ingredients (Deoxycholic acid and Phosphatidylcholine) potential ability to enhance lymphatic drainage can help reduce the appearance of cellulite while also reducing tissue congestion, resulting in decreased circumference of the respective body area. Enhanced lymphatic flow could facilitate weight loss by enhancing the rate at which triglycerides can enter general circulation to be used as metabolic substrate and burned as fuel.

- ✓ **Pharmaceutical Grade and Therapeutically Dosed**
- ✓ **Highly Targeted Fat & Cellulite Reduction**
- ✓ **Excellent Companion to Any Protocol**
- ✓ **Each Pump Delivers 60mg of Key Meso Ingredients**

Phosphatidyl choline - A vital substance that is in every cell in the human body, assists the elimination of fatty deposits.

Deoxycholic Acid - Facilitates fat breakdown and enhances lymphatic drainage.

Hyaluronic Acid - Protects & regenerates the skin's underlying structure by increasing moisture, stimulating collagen and elastin synthesis, and promoting tissue repair.

Allantoin - Increases the smoothness of the skin; promotes cell proliferation and wound healing.

Vitamins A,C,&E – Powerful antioxidant protection.

Shea Butter - Provides ultra-moisturizing benefits.

Excellent for Minimizing and Reducing the Appearance of Cellulite
