

Diamond Tipped & Tungsten Carbide Blades

What's the difference?

- The Tungsten carbide blade is ideal for the removal of paint from flat timber.
- It is a low-cost option for projects of a general nature where a heavy-duty removal like Gelcoat is not required or you are not working on a substrate like fiberglass, concrete, metal etc.
- 278 Sq. Meters lead paint.
- Double that amount on non-lead paint.

- The diamond Tipped blade creates less heat and superior strength
- Less wear allows it to strip 2,787 sq. meters on timber
- 185 sq. meters on gelcoat or fiberglass
- 46 sq. meters on concrete or steel
