TOGETHER WE WILL SAVE LIVES

Illicit Fentanyl Awareness

As little as 2mg can be lethal

The Dangers

Preteens and teens experimenting with drugs are most at risk. One time is all it takes to end their life if they receive a counterfeit pill or a laced drug,

Fake pills are being mass produced and being sold as legitimate prescription pills to deceive the American public.

DEA lab testing reveals 4 out of every 10 Counterfeit pills often contain lethal dose.

Fake prescription pills are easily accessible and often sold on social media making them available to anyone with online access.

Many counterfeit pills are made to look like prescription pills such as oxycodone, Oxycontin, Percocet, Vicodin, Xanax, and Adderall.

Fentanyl has also been found in vape pens, marijuana, heroin, cocaine and methamphetamine.
