CAN LINERS

High-Density

Linear Low-Density

CHOOSE FROM TWO TYPES OF CAN LINERS.

High-Density (HD)

- Use for non-sharp objects (indoor garbage, such as towels and office paper)
- Three times stronger than LLD for the same thickness, but tear easily once punctured
- Best cost savings option per thickness vs. LLD

Linear Low-Density (LLD)

- Maximum puncture and stretch resistance
- Use when disposing of sharp objects
- Thickness measured in MILS (.35 mil to 4 mils)

STRENGTH GRADE AND GAUGE

Throughout this section, you will see items listed by strength grades as well as gauge. Here's how the two measures relate. Refer to this data to make the appropriate choice for your applications.

Light — Use for crumpled paper, cups and light waste.

Medium — Appropriate for packaging waste, wet paper and similar mixed trash.

Heavy — Choose for light wood, metal scraps and wet cardboard.

Extra-Heavy — Select for when trash is consistently heavy, wet or sharp.

Super/Extra-Heavy — Use on the heaviest cleanup jobs, in warehouses, cafeterias, or facility grounds.

Gauge Equivalents

Strength grades are based on static load, also known as lifting strength. LLD and HD plastic materials achieve the same static load with different gauges; order your bags accordingly. Use this chart for easy reference to determine approximate gauges.

Strength Grade	High-Density Micron Gauge	Linear Low-Density Mil Gauge
Light	5 – 9	.35 – .44
Medium	10 – 13	.45 – .60
Heavy	14 – 15	.61 – .69
Extra-Heavy	15 – 16	.70 – .89
XX-Heavy	17 – 19	.90 – 1.14
Super	—	1.15 – 1.39
Super-Heavy	—	1.40 – UP

CAPACITY

Know the capacity of your receptacles and select the bag or liner to suit. Bags and liners are available in a multitude of sizes; gallon capacity is listed with each item throughout this section.

SQUEEGEES

Moss Rubber

EPDM Rubber

Handles

SELECTING THE SQUEEGEE THAT WORKS BEST FOR YOU:

EPDM RUBBER

This is a high-quality rubber blade with greater chemical resistance than moss rubber. This type of blade is smooth to the touch, non-marking and slightly stiff. It is resistant to UV damage, aging, and weathering, giving you long-lasting use. This material is great for use on any smooth, even surface.

MOSS RUBBER

This type of rubber blade has a sponge-like consistency. It is more malleable than EPDM rubber and conforms to the surface to create a seal between the blade and floor. This makes moss rubber better for uneven or rough surfaces like tile, slate, or brick.

STRAIGHT

Straight squeegee blades are better for moving large volumes of liquid across a surface.

CURVED

Curved Squeegee heads are better for controlling and directing liquids toward floor drains.

LENGTH

When selecting the length of the squeegee, keep in mind the dimensions of the area to be cleaned. Tight spaces may require a shorter squeegee. Longer squeegees can make it easier to work in large areas.

FRAME

All squeegee frames are aluminum and work for light to heavy-duty applications.
