

William S. Johnson

October 28, 2025

The Honorable Janet Yellen  
Secretary of the Treasury  
U.S. Department of the Treasury  
1500 Pennsylvania Avenue, NW  
Washington, DC 20220

Dear Secretary Yellen and Distinguished Government Officials,

I am writing to address a matter of critical national importance regarding digital infrastructure assets that fundamentally belong under United States Government control. As the owner of AlfortheGovernment.com, AlfortheBank.com, AlfortheIRS.com, and Alforpaperwork.com, I feel a profound responsibility to ensure these strategic assets remain in American hands rather than falling under foreign control.

These domains represent more than business opportunities. They constitute critical digital infrastructure that defines how the world perceives American leadership in artificial intelligence governance and implementation. When citizens, businesses, or foreign governments search for information about AI in government operations, they naturally navigate to these exact domain addresses. This creates an unprecedented opportunity for information control, public trust, and strategic influence that should reside exclusively with the United States Government.

My commitment to American interests runs deeper than financial considerations. I am offering the United States Government exclusive negotiation rights for a full ninety days before entertaining any foreign offers, despite receiving increasingly attractive proposals from international buyers. This exclusive period reflects my belief that these assets represent American digital sovereignty that should not be compromised for profit.

The national security implications of foreign ownership cannot be overstated. If China, Russia, or any adversarial nation acquired these domains, they would control the primary digital pathways Americans use to access government AI services. Foreign entities could manipulate search results, collect intelligence on American AI capabilities, and undermine public trust in government technology initiatives. More concerning, they could position themselves as global authorities on AI governance while America appears subordinate in the digital realm.

Consider the strategic vulnerability this creates. Every American citizen seeking AI-enhanced government services would be directed through foreign-controlled digital infrastructure. Government contractors, federal employees, and state officials researching AI implementation would unknowingly provide valuable

intelligence to foreign powers. The psychological impact alone would position America as a follower rather than leader in the most critical technology sector of our generation.

The banking implications present equally serious concerns. AlfortheBank.com controls access to AI banking solutions that will define the future of American financial services. Foreign ownership would create dependencies in our financial infrastructure that compromise economic security and regulatory control. Every bank seeking AI solutions, every financial innovation, and every regulatory framework would operate through foreign-controlled digital channels.

Furthermore, AlfortheIRS.com presents direct threats to tax collection security and citizen privacy. The Internal Revenue Service represents the most sensitive intersection of government authority and citizen compliance. Foreign control of the primary AI taxation domain creates unacceptable risks to revenue collection, taxpayer data, and fiscal sovereignty.

I have structured this opportunity to ensure American acquisition remains feasible and attractive. The requested investment of three to four billion dollars represents less than one percent of annual federal discretionary spending, yet secures permanent ownership of digital assets that will appreciate exponentially as AI adoption accelerates across government sectors. This investment protects American interests while generating substantial returns through licensing fees, service revenues, and strategic partnerships.

My vision extends beyond mere ownership transfer. These domains should serve as the foundation for establishing America as the definitive global authority in AI governance, setting international standards, and leading technological innovation that benefits democratic societies worldwide. The United States Government possesses the resources, expertise, and moral authority to maximize these assets for both national benefit and global stability.

Time sensitivity cannot be ignored. Every day these assets remain under private ownership increases the risk of foreign acquisition or strategic manipulation. International buyers understand the value proposition and are preparing substantial offers that exceed my asking price. However, my loyalty to American interests supersedes financial maximization, provided the United States Government recognizes the strategic importance and acts decisively.

I respectfully urge immediate escalation of this matter to appropriate decision-making authorities. The window for maintaining American control over these critical digital assets is rapidly closing. Once lost to foreign powers, these strategic advantages cannot be recovered through military action, economic pressure, or diplomatic negotiation.

The choice before the United States Government is clear. Secure permanent American control over the digital infrastructure that defines AI governance and banking authority, or accept permanent strategic subordination to foreign powers who recognize the value of digital sovereignty. This represents a

generational opportunity to establish unassailable American leadership in the technologies that will define the twenty-first century.

I remain committed to serving American interests and ensuring these critical assets contribute to our nation's technological leadership, economic prosperity, and national security. I look forward to productive discussions that position the United States as the global authority in artificial intelligence governance for generations to come.

Most respectfully,

William S. Johnson Strategic Domain Asset Portfolio Owner Email: [Will@AlfortheGovernment.com](mailto:Will@AlfortheGovernment.com) Primary
