

The background is a deep blue space scene. On the left, the curved horizon of the Earth is visible, glowing with a bright blue light. The rest of the background is filled with a dense field of stars and a faint, glowing nebula on the right side. Overlaid on the scene are several blue, stylized circuit-like lines with circular nodes, forming a network pattern around the text.

MNC Teaser Intro V.1

**——Metaverse Network LLC
5th Nov'2021**

Prelude

"Since the beginning of Pangu, the development of human civilization has been evolving on the earth, and human beings are just protein cells." Human cognition of our earth is only one of the nine planetary universes. How big is the universe? It's always just a matter of opinion. Everything is just a scholar's research judgment, confirmed? There has never been any basis.

Human's sitting and survival is only a prisoner of time. Life, old age and death are inseparable from 24 hours a day. Most humans have 8 hours of sleep. The most amazing thing is that whether young or old, strong or not, they also need sleep. What is the dream in sleep? Why is the dream always so real? Today, with the development of science and technology, human beings have not been able to solve dreams? Are we living in dreams? Or are dreams real reality? Is our physical body a real scene in the universe? Or is our real God living in the meta universe the real scene? If we are one? Can we, living in the universe, open the door of the meta universe? What form is the meta universe?

Genesis

Since the creation of all things in the universe, many strange events have taken place on earth, including the earth after three ice ages. After the extinction of all things, protein cells can reproduce alone again? So far, neither humans nor scientists can explain that since human leaders began to March East and West, the earth has been divided into hundreds of countries. These countries spread their culture, language, self-determined system and currency. When the economy is developing more and more vigorously, countries have also carried out trade due to their own needs, and the overall earth's economic and social ecology has begun a prosperous period.

Now

Present century

Once upon a time, one plague after another caused damage to human life and economy on the earth, and also made the social economy need to start again. Hundreds of years later, the new coronavirus destroyed the global economy at the end of 2019. This disaster will sound the alarm of mankind to the universe, because the long suffering of the virus has not been relieved until today. Because of the economic stagnation, the global industrial chain will face fracture... Ten years ago, a mysterious organization named "Satoshi Nakamoto" invented decentralized economic bookkeeping transaction, which has a trance insight into today's world. When mankind encounters hundreds of years of disasters, mankind can no longer be safe for themselves. Only human unity, common mission and common destiny can win the victory of survival. However, the concept of "Nakamoto cong" consumes energy in practice, Making the cost and operation extremely difficult, at this time, we need a globally unified currency, a decentralized ecology and a new universe, so that the original God can live in a stable and appropriate way. MNW metaverse network was born.

The background is a deep, dark blue space filled with numerous small, bright white and light blue stars. A prominent feature is a glowing, circular ring in the center, which has a gradient from purple to orange. To the right, there is a bright, blue, nebula-like structure with a yellowish core. The overall atmosphere is cosmic and ethereal.

Chapter 1

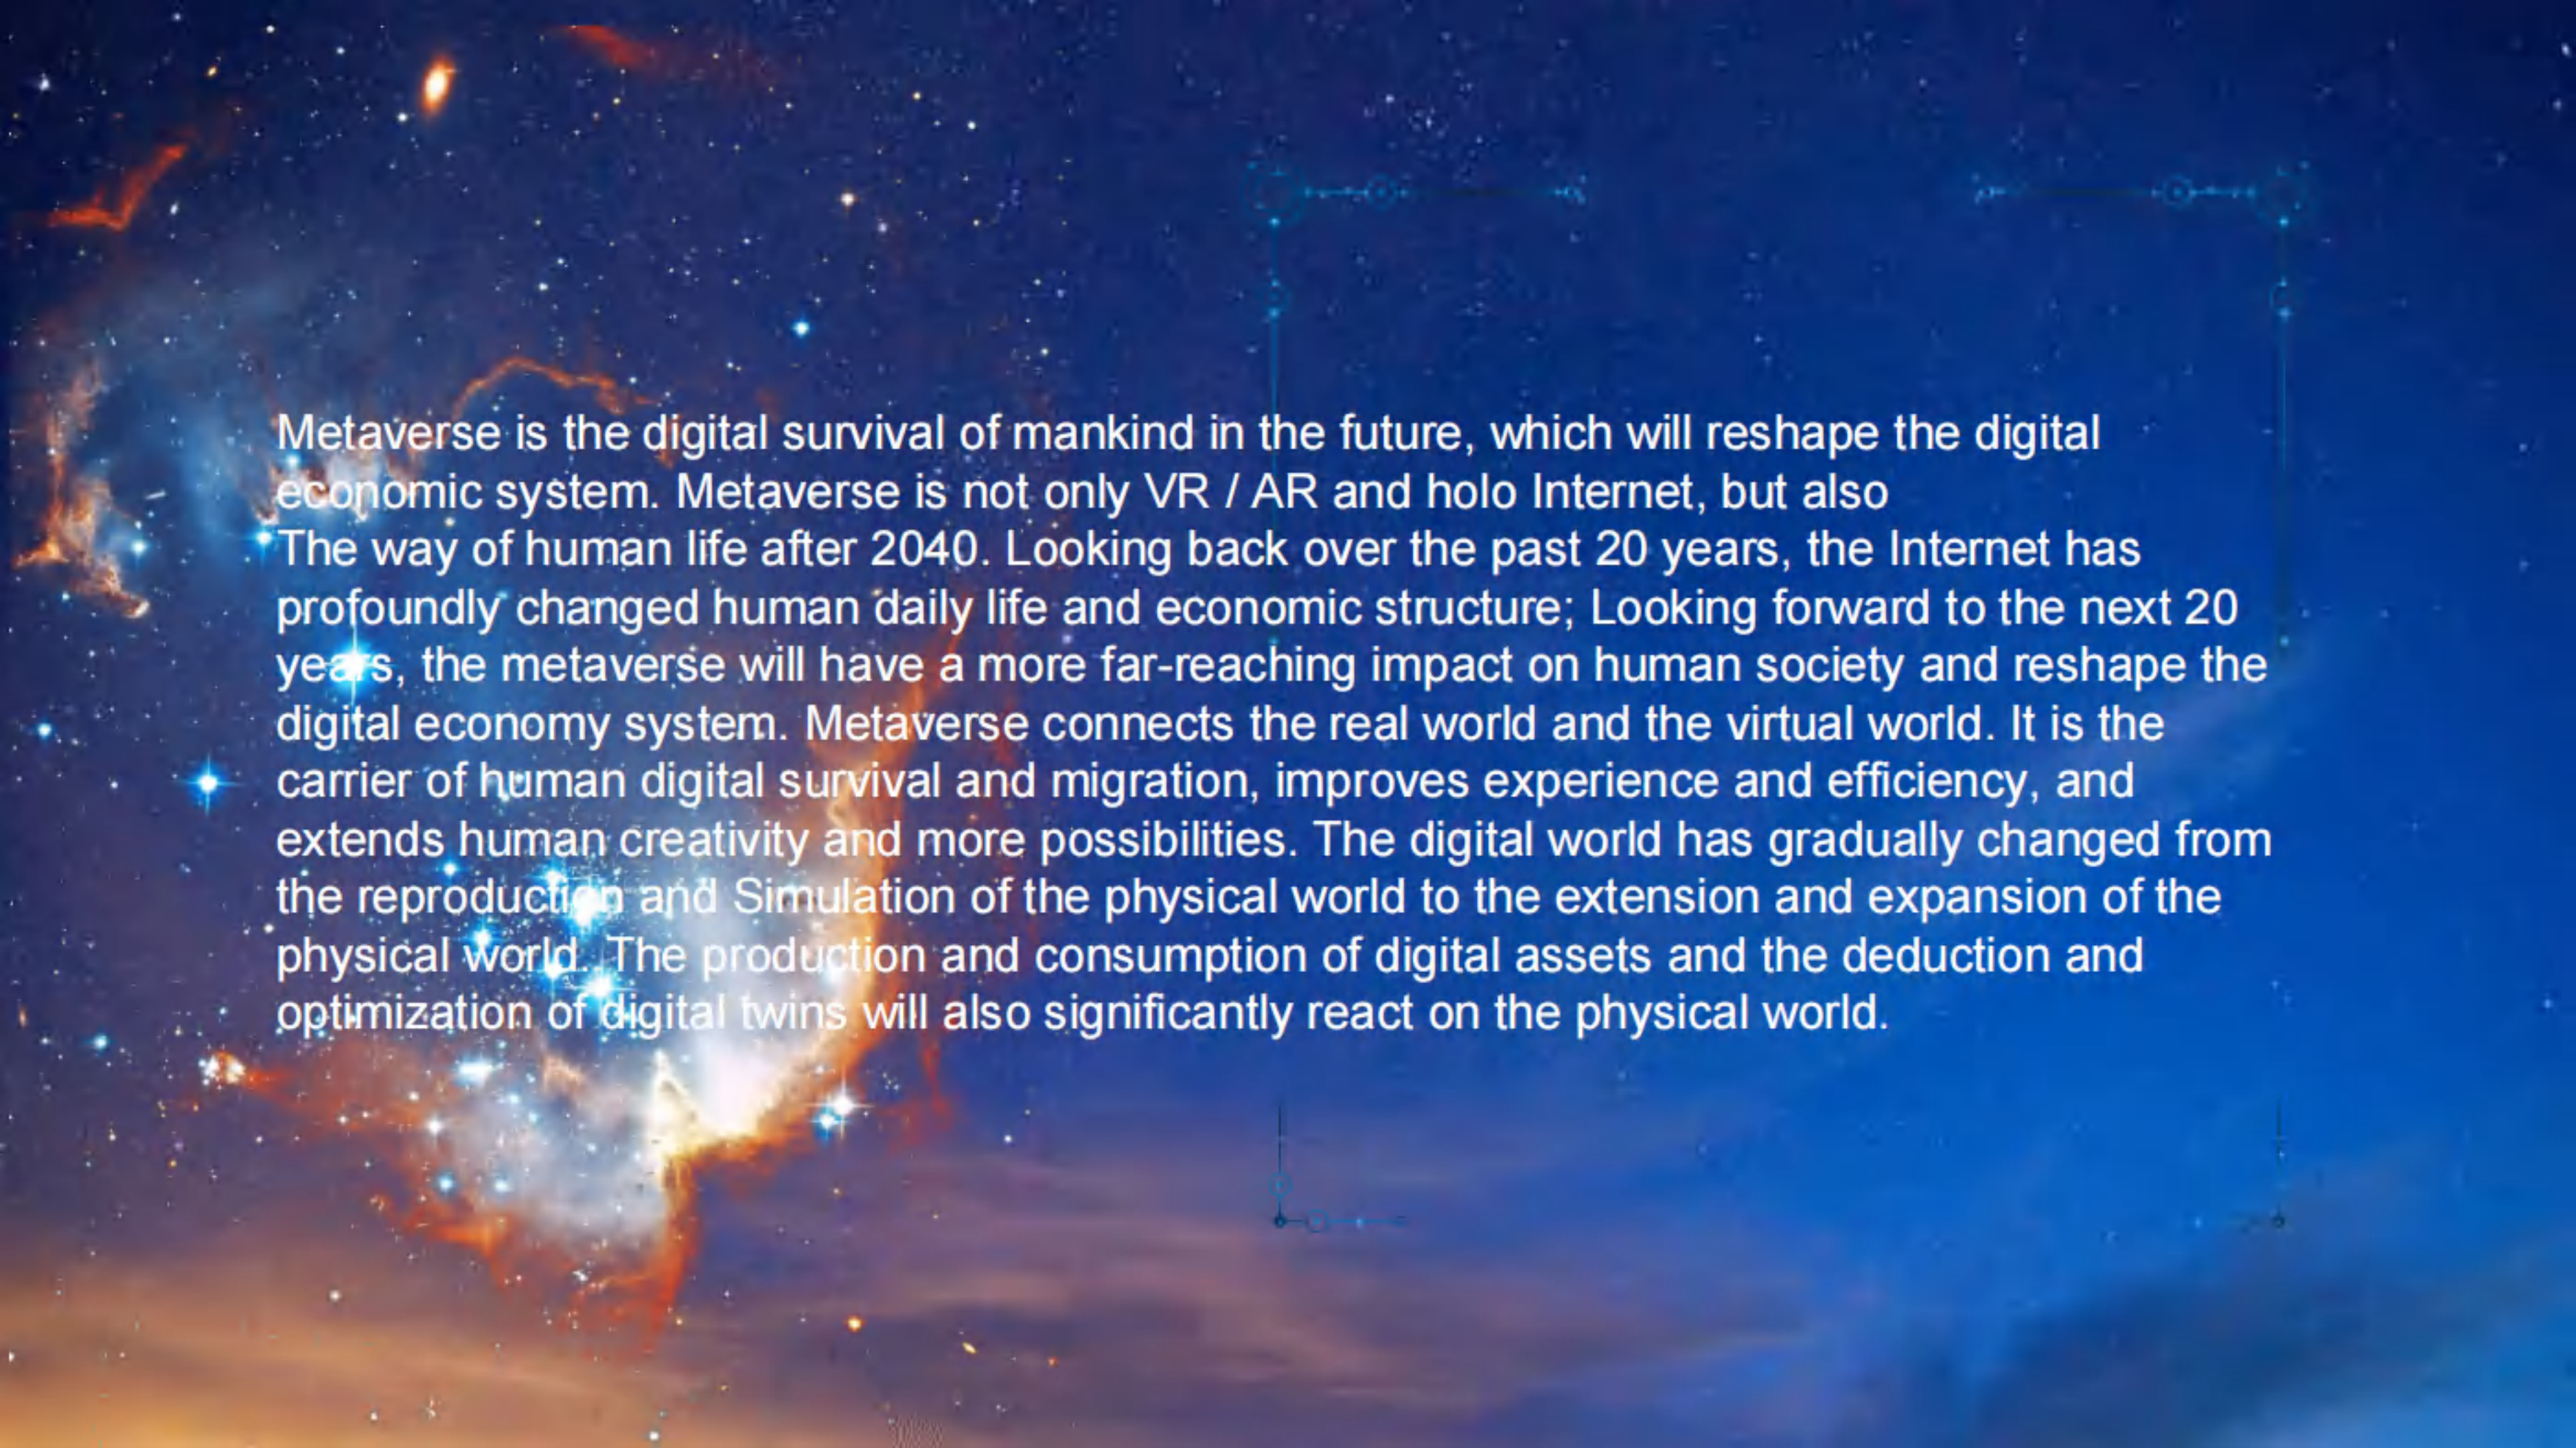

Metaverse related topics quickly broke the circle, the market attention was very high, and differences and consensus coexisted. We believe that the ultimate metaverse connects the physical world and

The digital world will become the way of human life in 20 years and reshape the digital economic system. The metaverse is formed by aggregating a large number of discrete single point innovations

New species bring long-term potential and opportunities beyond imagination. In the next 3-5 years, the metaverse will enter the embryonic exploration period, including VR / AR, NFT, AI Incremental technological breakthroughs and business model innovations in the fields of cloud, pugc game platform, digital man and digital twin city will emerge one after another. Medium and long term

Look, the investment opportunities of metaverse include: GPU, 3D graphics engine, cloud computing and IDC, high-speed wireless communication, Internet and game company platform, digital twin city, industrial metaverse, solar energy and other sustainable energy.

Metaverse is the digital survival of mankind in the future, which will reshape the digital economic system. Metaverse is not only VR / AR and holo Internet, but also the way of human life after 2040. Looking back over the past 20 years, the Internet has profoundly changed human daily life and economic structure; Looking forward to the next 20 years, the metaverse will have a more far-reaching impact on human society and reshape the digital economy system. Metaverse connects the real world and the virtual world. It is the carrier of human digital survival and migration, improves experience and efficiency, and extends human creativity and more possibilities. The digital world has gradually changed from the reproduction and Simulation of the physical world to the extension and expansion of the physical world. The production and consumption of digital assets and the deduction and optimization of digital twins will also significantly react on the physical world.

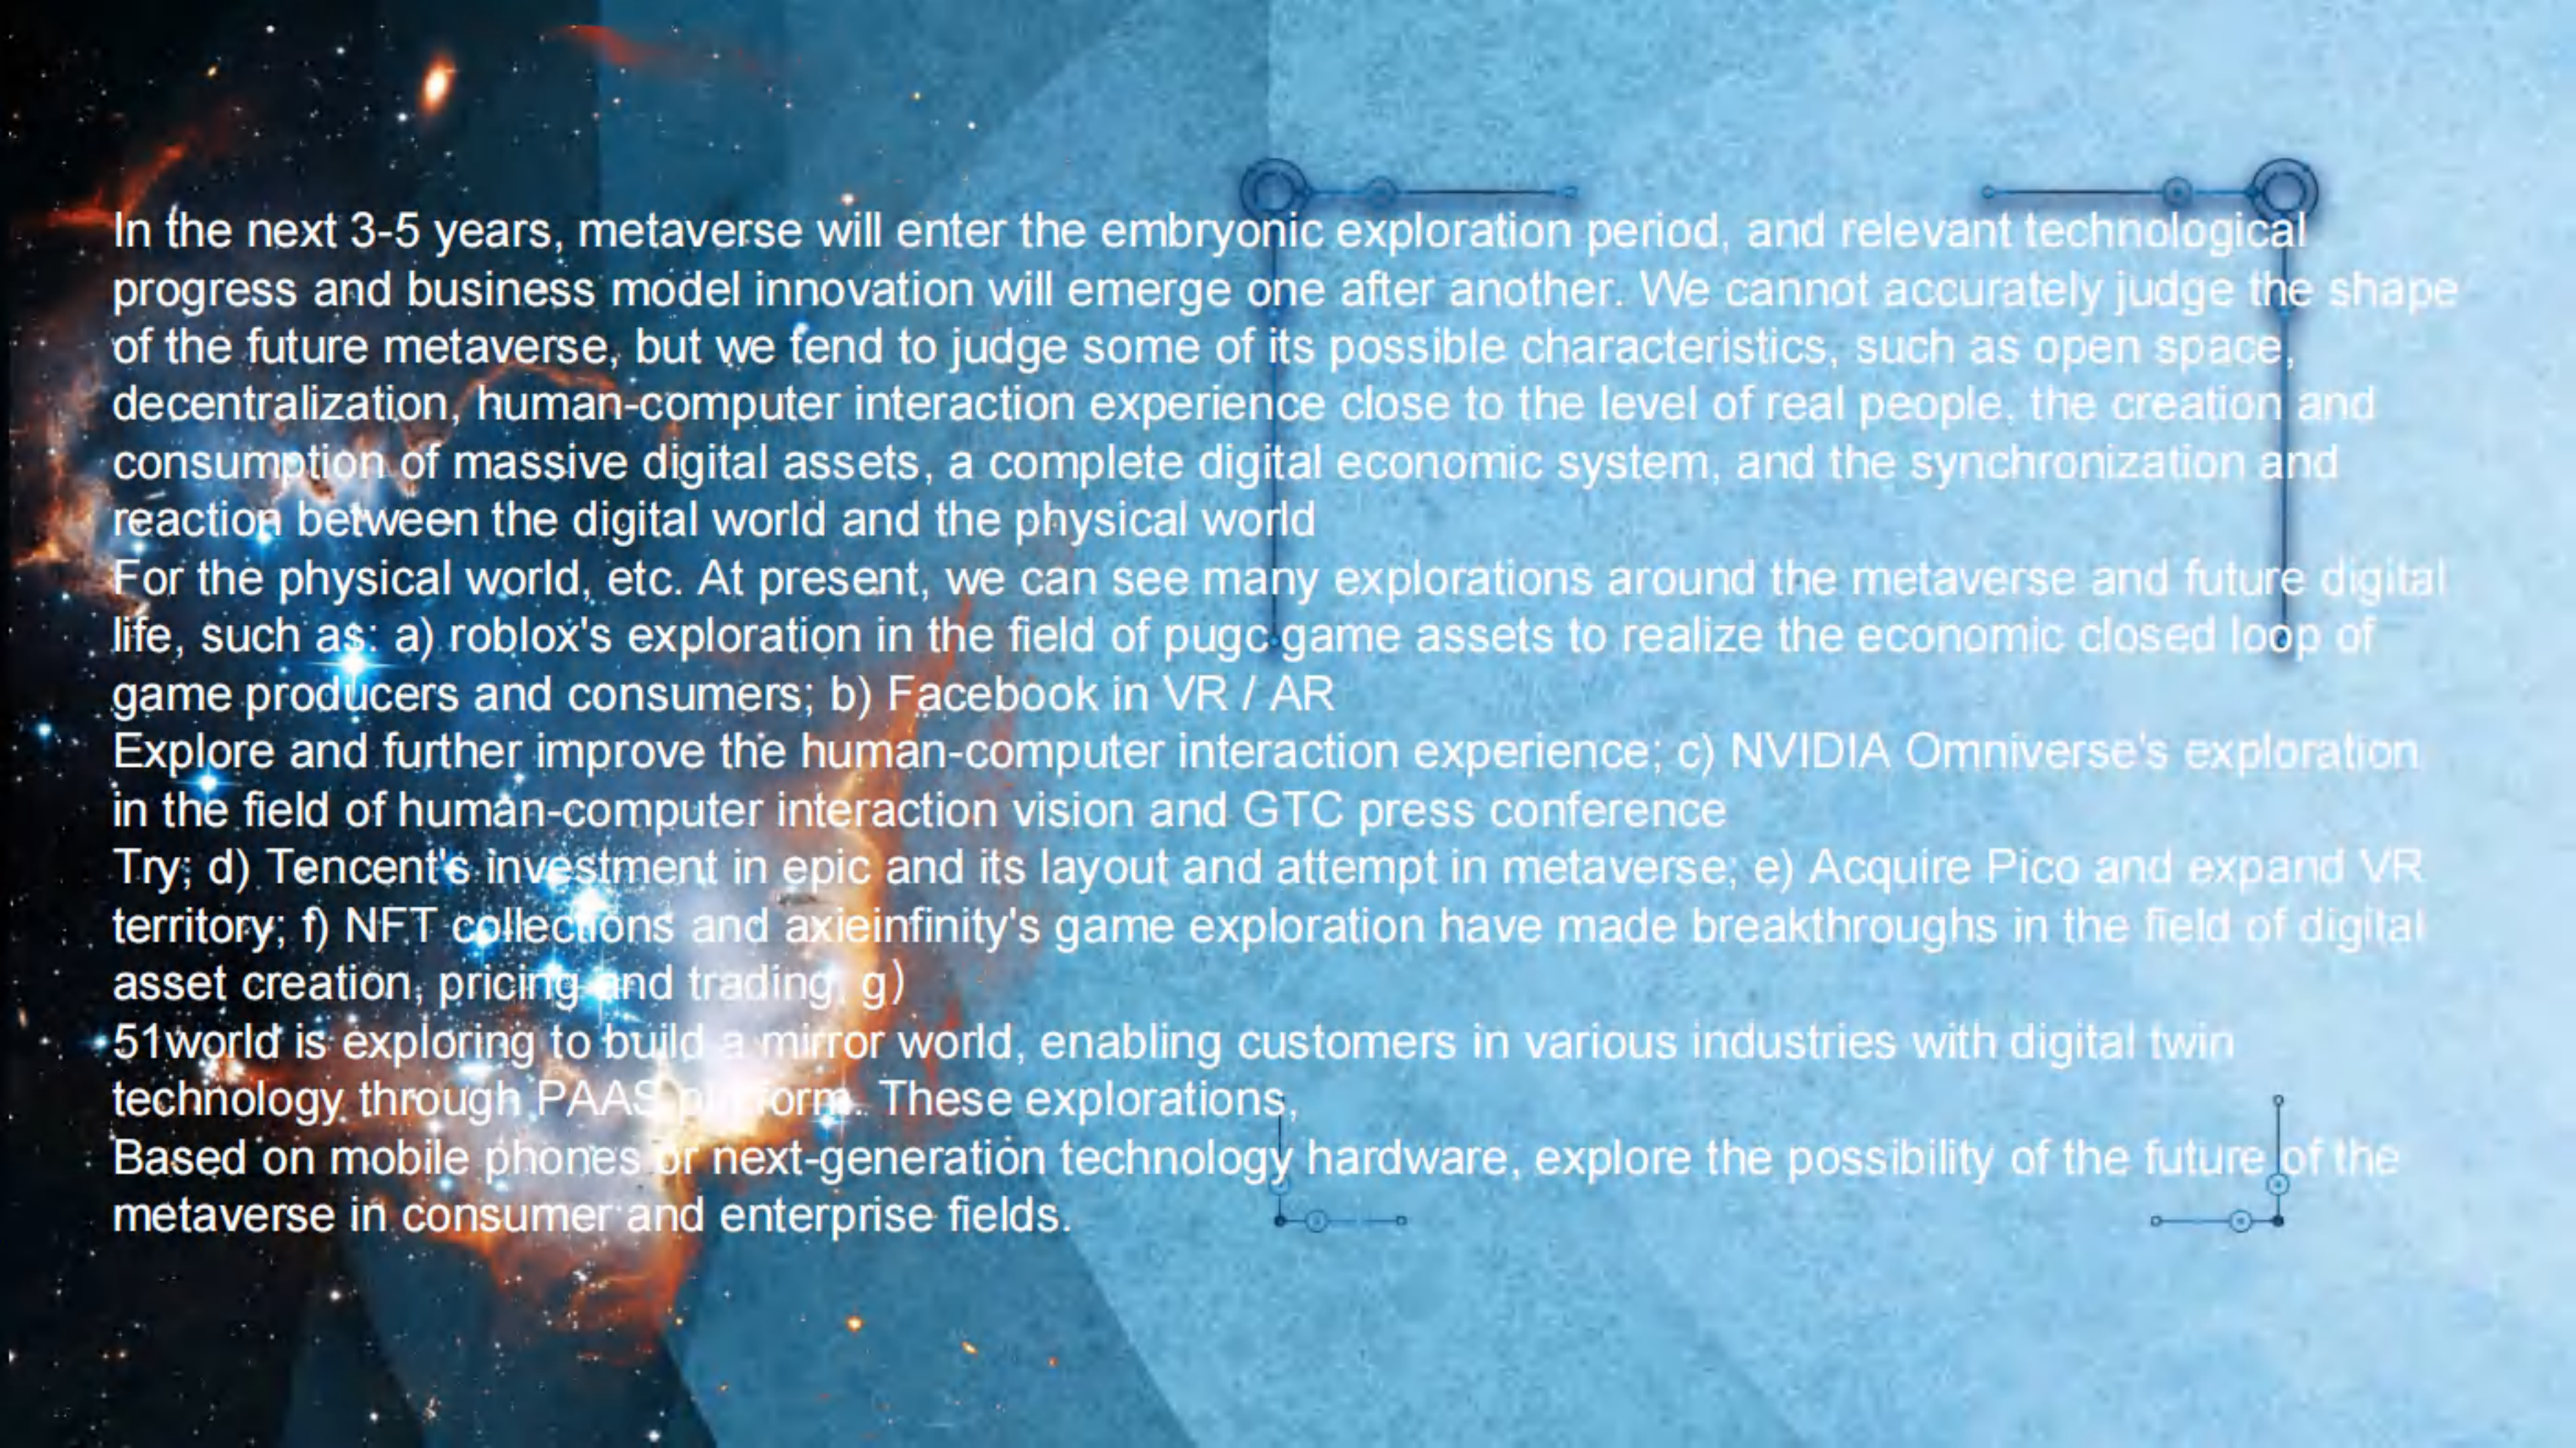

The ultimate form of the metaverse is the sum of a series of "connecting points into lines" technological innovations, and the potential of new species may exceed all imagination. Like jobs's "necklace" metaphor, the emergence of the iPhone has connected single point technologies such as multi-point touch screen, IOS, high-pixel camera and high-capacity battery, "redefined the mobile phone" and opened the mobile Internet era of more than ten years. At present, we are gradually approaching the of the meta universe

At the moment of iPhone, technological innovations such as continuous improvement of computing power, high-speed wireless communication network, cloud computing, blockchain, virtual engine, VR / AR, digital twin and robot gradually converge. We judge that the real meta universe still needs more technological progress and industrial aggregation

It will not be possible until 20-30 years later. By then, the time and energy of generation Z will further migrate from the physical world to the digital world. The average daily online time may be increased from the current 4-6 hours to more than 10 hours. More work and life will continue to be digitized, and human-computer interaction will be infinitely close

Even beyond the interactive experience between people, a large number of digital assets are created, traded and consumed. With the digital migration of labor force and the decentralized digital asset transaction based on blockchain, the digital world may become an open world close to unlimited space, carrying more imagination and energy

creative ability. The ultimate form of the metaverse is the combination of science and technology and humanities, the empowerment of human experience and efficiency by science and technology, and the reconstruction of economy and society by technology. Just as it was difficult for us to imagine and accurately predict the changes of the Internet to today's life and society 20 years ago, facing the future, we are also likely to lack imagination about the changes that the metaverse may bring in 20 years later.

In the next 3-5 years, metaverse will enter the embryonic exploration period, and relevant technological progress and business model innovation will emerge one after another. We cannot accurately judge the shape of the future metaverse, but we tend to judge some of its possible characteristics, such as open space, decentralization, human-computer interaction experience close to the level of real people, the creation and consumption of massive digital assets, a complete digital economic system, and the synchronization and reaction between the digital world and the physical world

For the physical world, etc. At present, we can see many explorations around the metaverse and future digital life, such as: a) roblox's exploration in the field of pUGC game assets to realize the economic closed loop of game producers and consumers; b) Facebook in VR / AR

Explore and further improve the human-computer interaction experience; c) NVIDIA Omniverse's exploration in the field of human-computer interaction vision and GTC press conference

Try; d) Tencent's investment in epic and its layout and attempt in metaverse; e) Acquire Pico and expand VR territory; f) NFT collections and axieinfinity's game exploration have made breakthroughs in the field of digital asset creation, pricing and trading; g)

51world is exploring to build a mirror world, enabling customers in various industries with digital twin technology through PAAS platform. These explorations,

Based on mobile phones or next-generation technology hardware, explore the possibility of the future of the metaverse in consumer and enterprise fields.

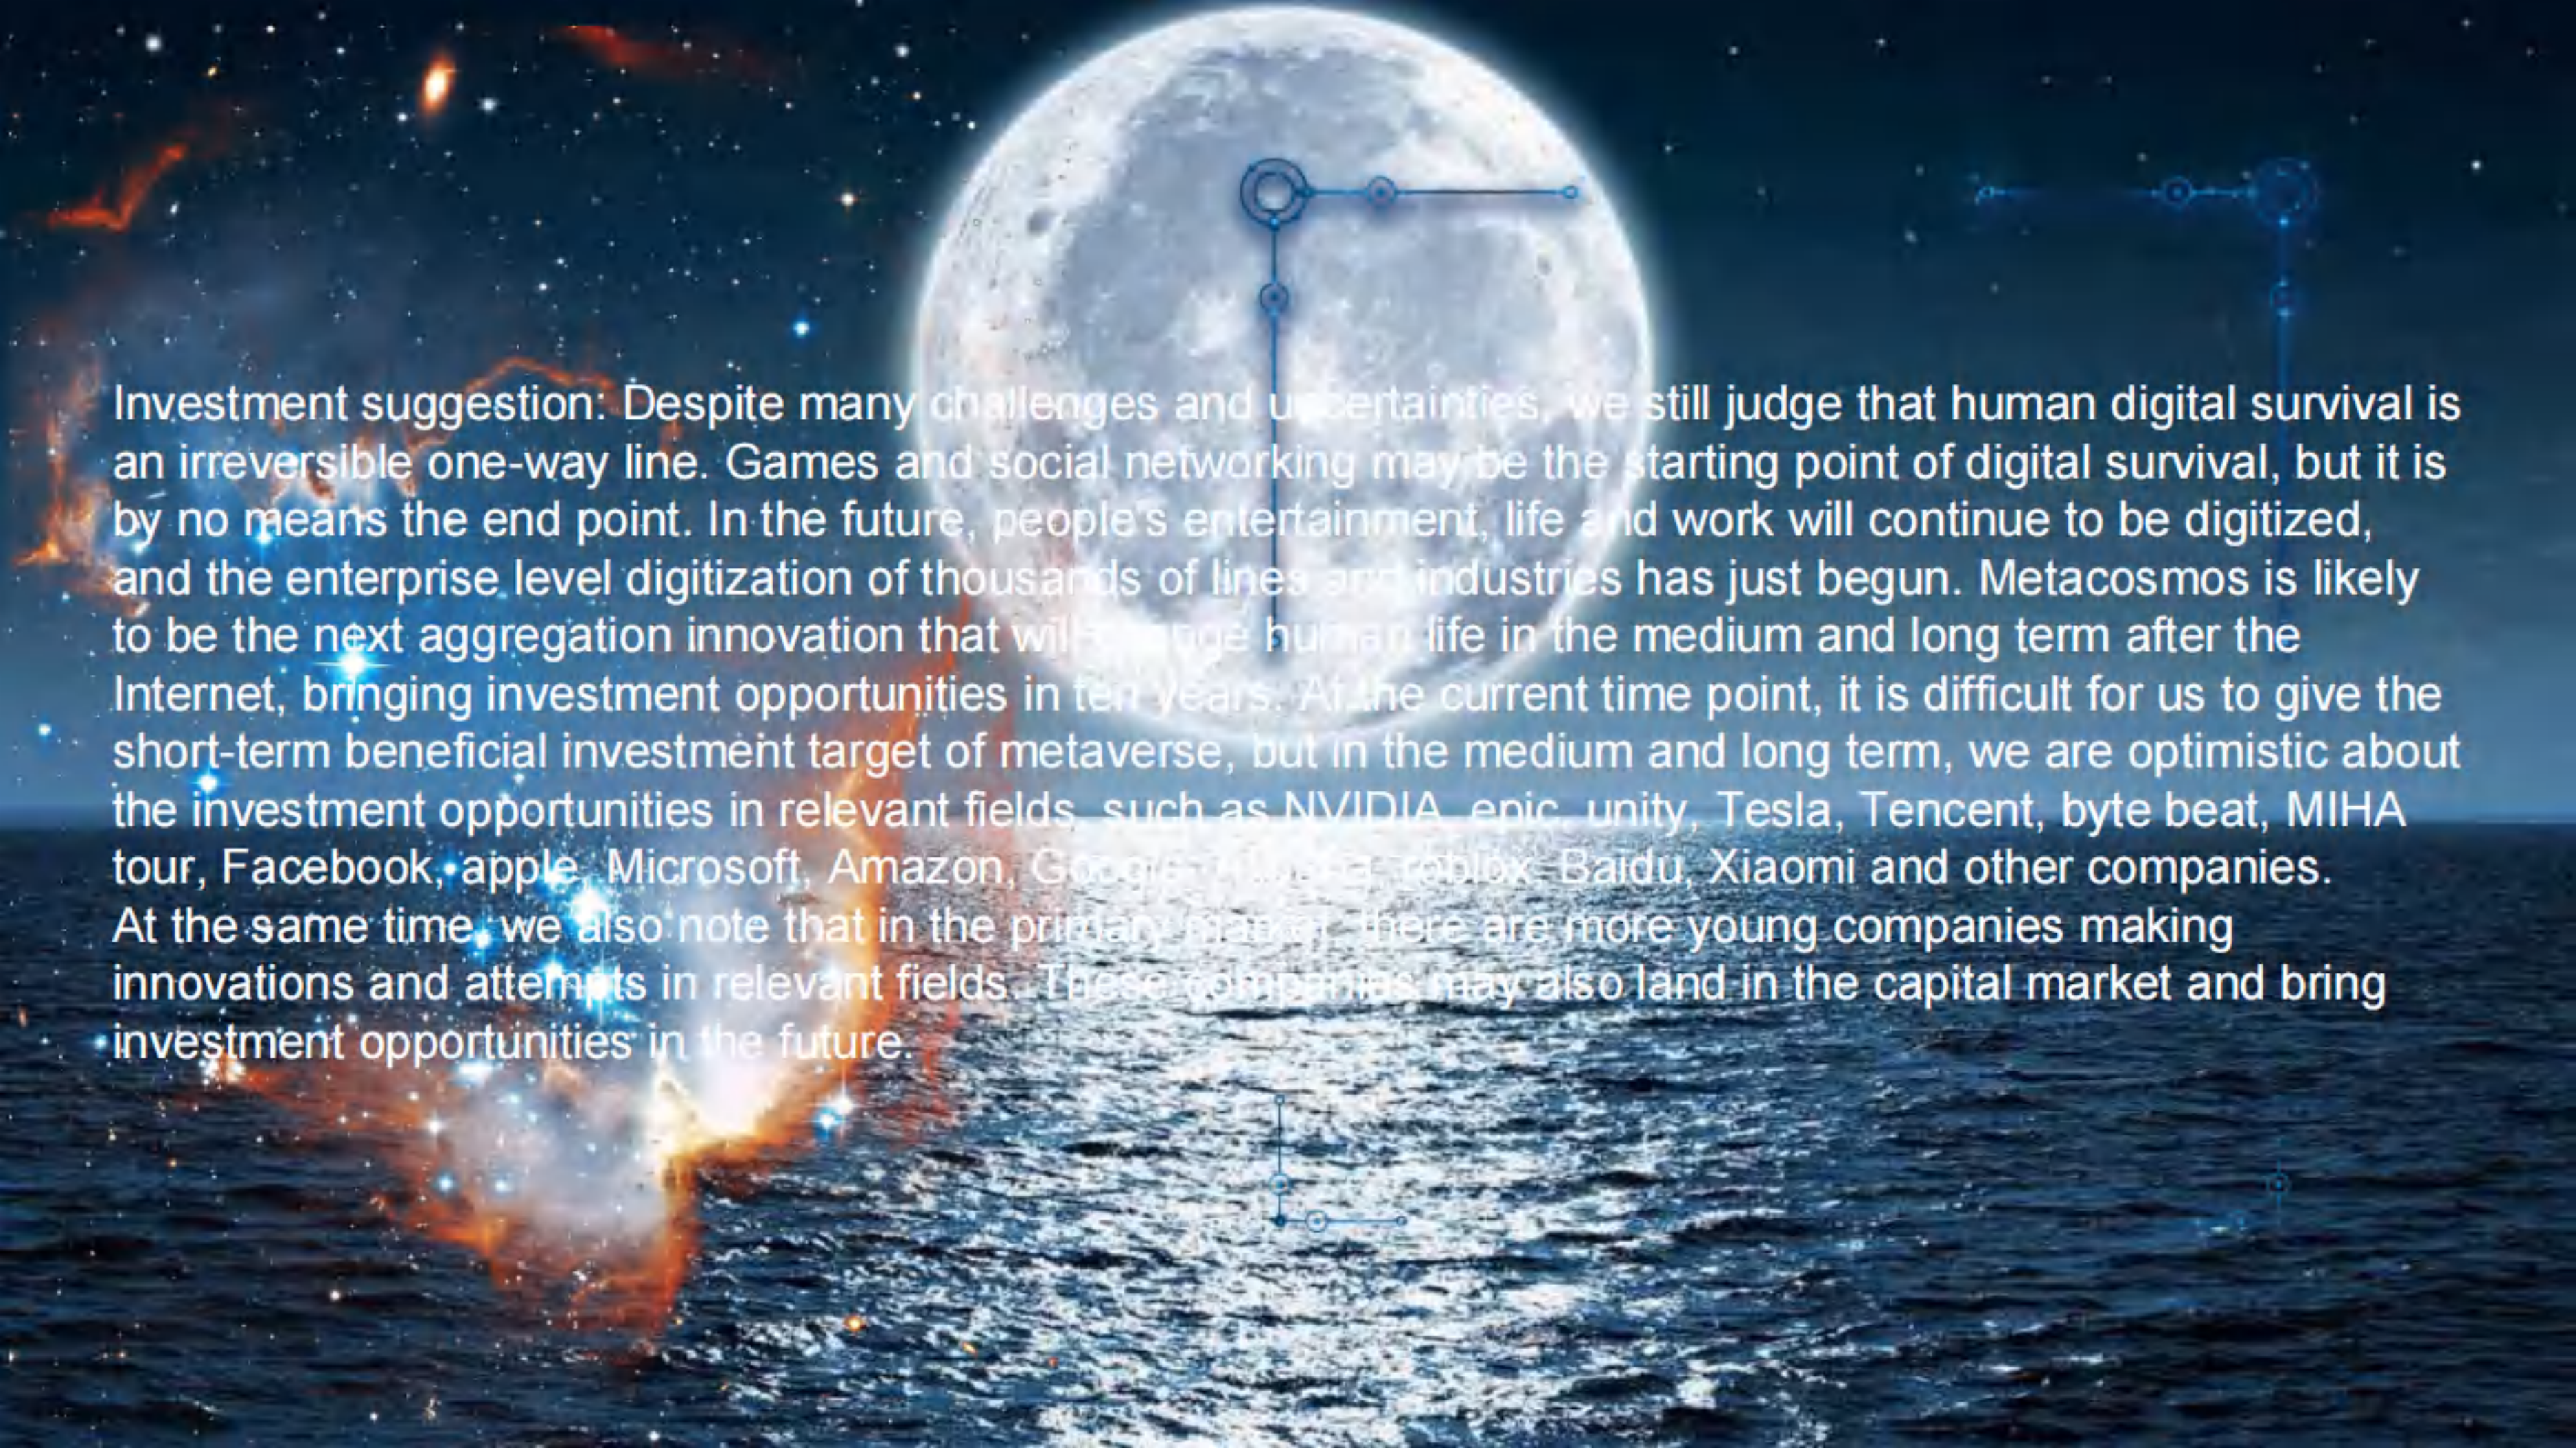

Computing power improvement and energy sustainability are not only the core constraints of the metaverse, but also investment opportunities. The noteworthy bases of the metaverse include: GPU 3D graphics engine, cloud computing and IDC, high-speed wireless communication, Internet and game company platform, digital twin city, industrial metaverse, solar energy and other sustainable energy. Games and social networking may be the starting point of metaverse investment, but in the medium and long term, the areas with the most investment value are still the key areas where the head company has strong technical and market advantages, such as NVIDIA in the GPU field, graphic engine company epic and Unity et al. In addition, advantageous companies in the fields of metacosmic infrastructure such as cloud computing, IDC, 5g and LEO satellites have also benefited from the digitization process for a long time, which is worthy of continuous attention. The first breakthroughs we saw in application layer may come from Tencent, byte beating (tiktok).

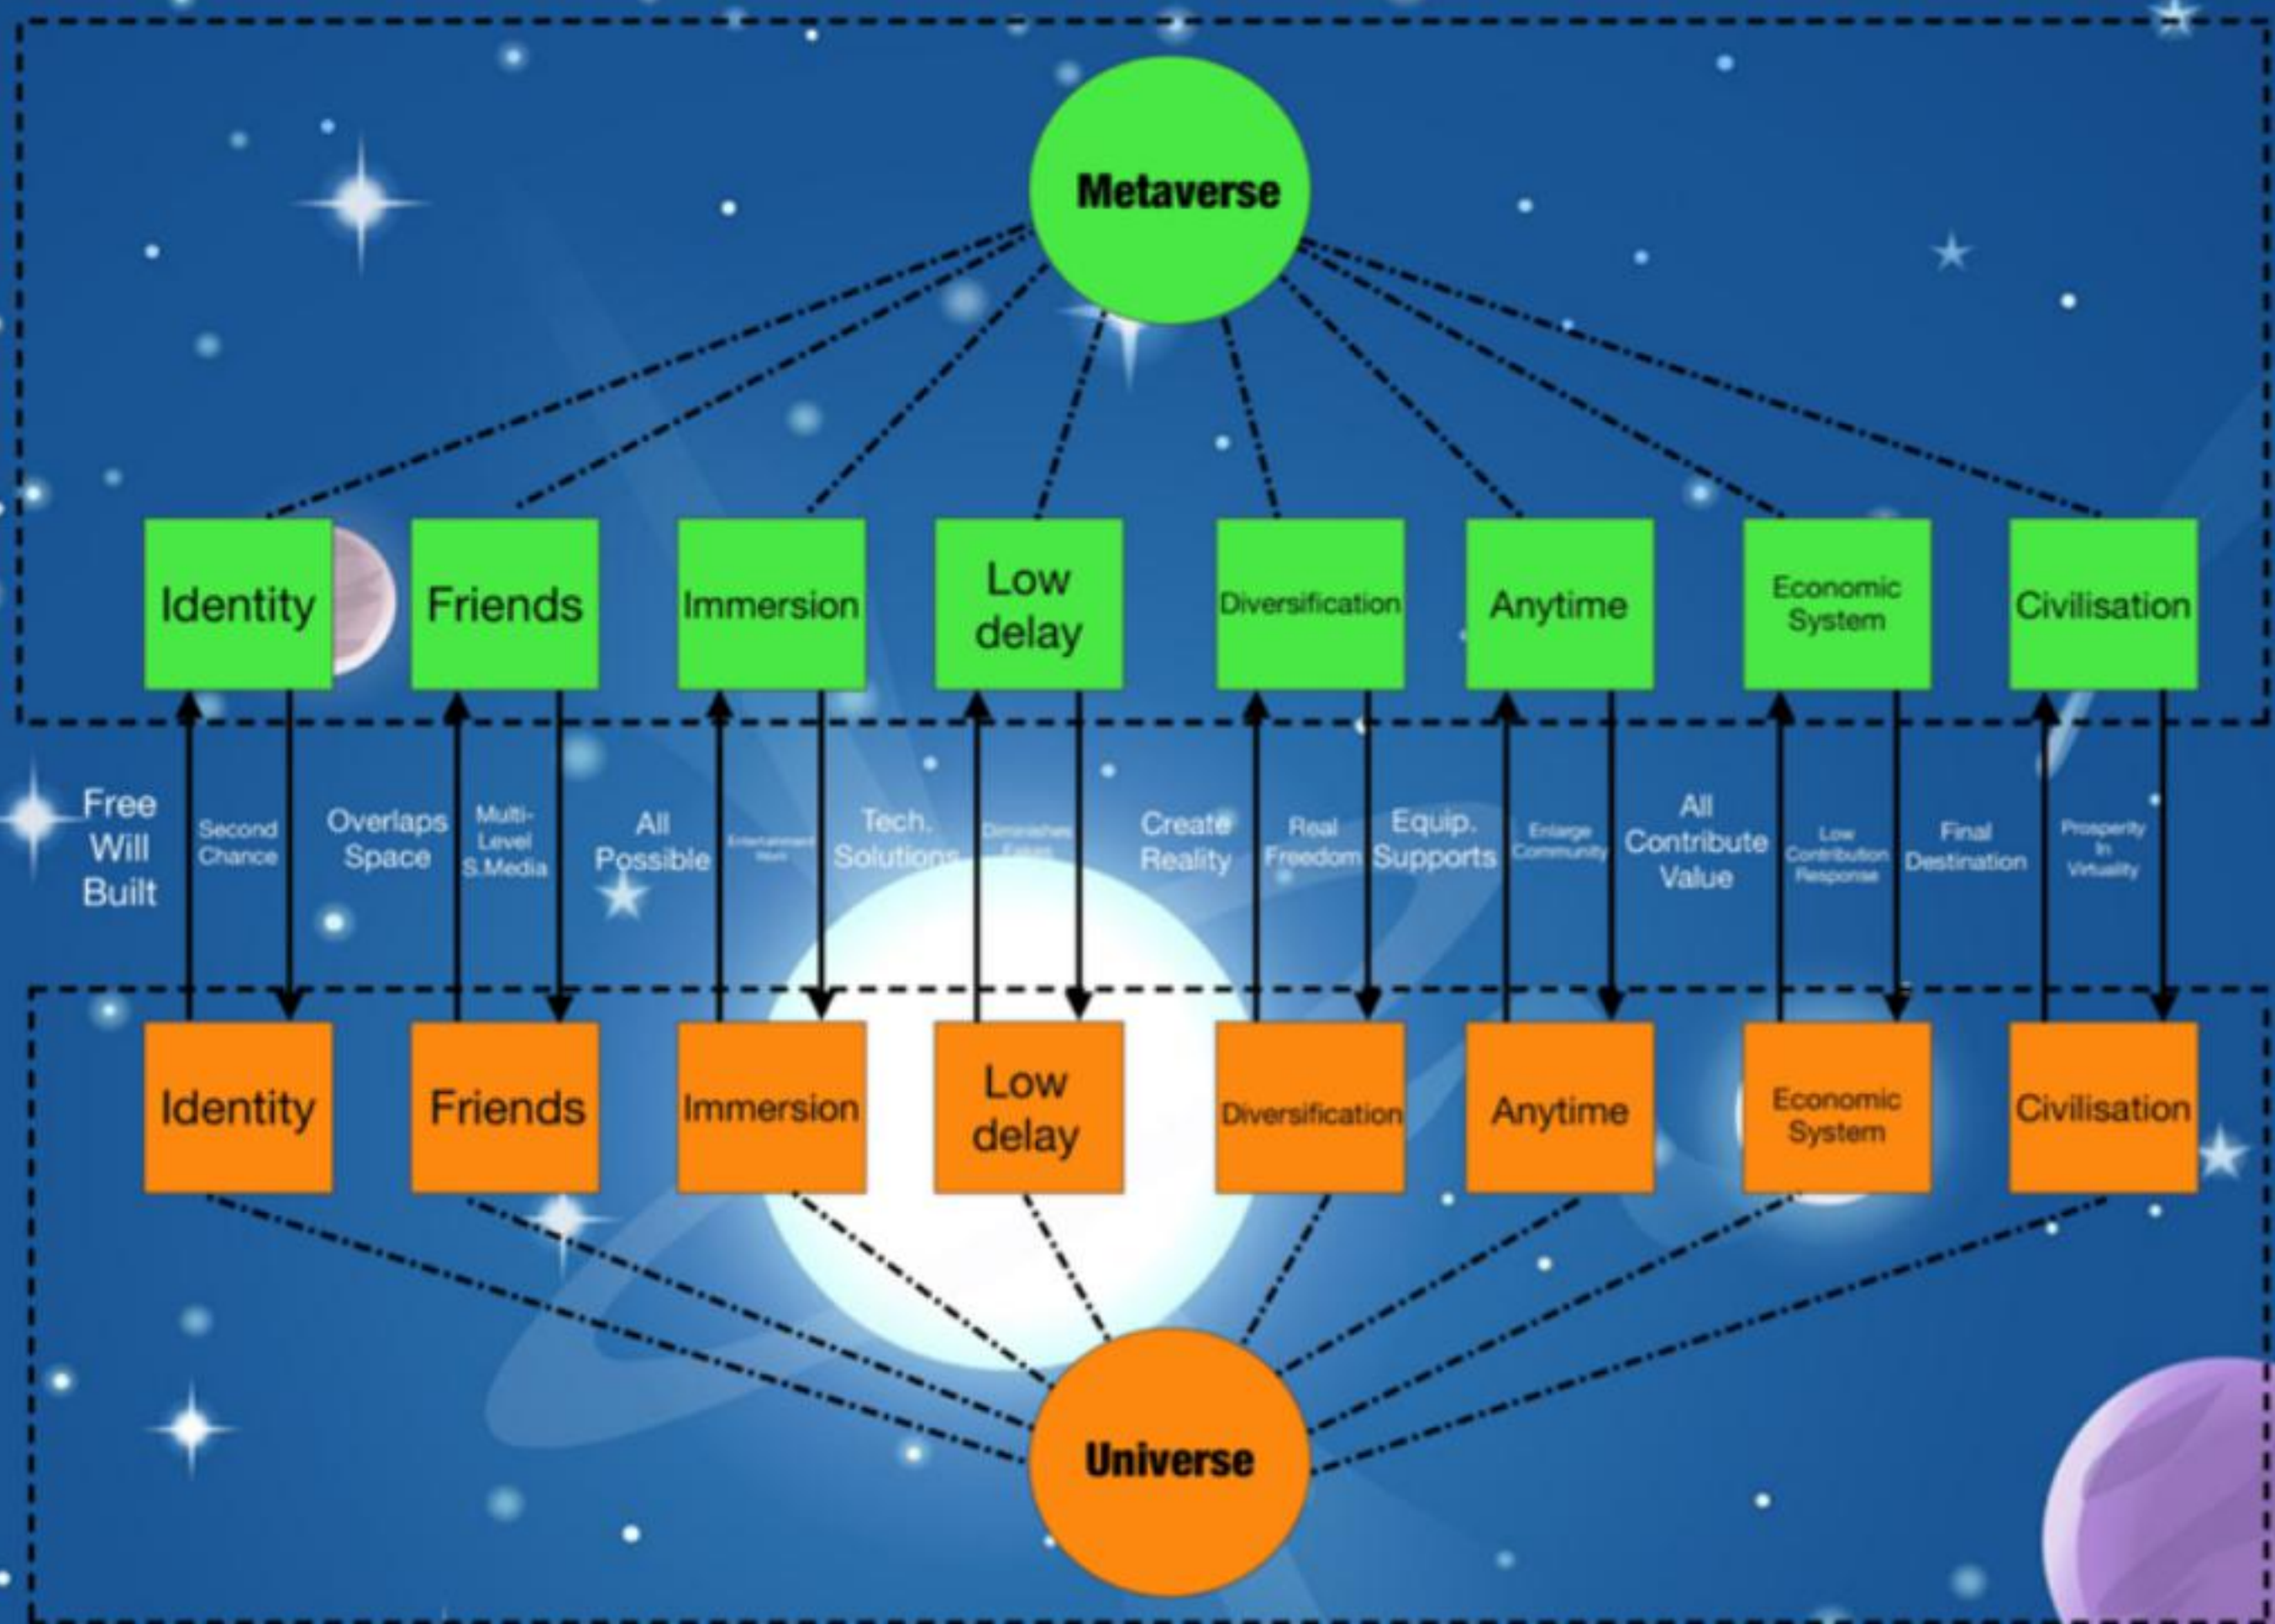

Facebook, Baidu and other science and technology giants explore in the fields of games, social networking and advertising, and pay attention to the hardware foundation and software tool innovation of mobile phone and technology hardware companies such as apple and Xiaomi. In addition, metauniverse's consumption of electric energy needs to find more stable and sustainable energy in the medium and long term. Tesla SolarCity's exploration in the field of solar energy and energy storage also deserves attention.

Risk factors: on the way to the ultimate pole picture of the metaverse, there will be many endless commercial exploration and attempts. Constrained by the technological progress at that time, the prototype products in the early stage of the metaverse are often controversial, and the commercialization effect is highly uncertain; On the other hand, based on the establishment of digital assets and economic systems such as blockchain and NFT, it is still related to the price of digital currency, and may face the risk of currency fluctuation and national supervision; AI, graphics engine, high-speed wireless charging and even battery technology may affect the development process of metaverse, and the related technology process is also uncertain; From the closed world of PGC dominated by Internet companies to pUGC digital development with a large number of consumers' participation, the Internet platform may also face changes and challenges; The consumption of electric energy in the metaverse and the digital world requires more sustainable energy and energy storage infrastructure, which also poses challenges to the future energy structure.

Investment suggestion: Despite many challenges and uncertainties, we still judge that human digital survival is an irreversible one-way line. Games and social networking may be the starting point of digital survival, but it is by no means the end point. In the future, people's entertainment, life and work will continue to be digitized, and the enterprise level digitization of thousands of lines and industries has just begun. Metacosmos is likely to be the next aggregation innovation that will change human life in the medium and long term after the Internet, bringing investment opportunities in ten years. At the current time point, it is difficult for us to give the short-term beneficial investment target of metaverse, but in the medium and long term, we are optimistic about the investment opportunities in relevant fields, such as NVIDIA, epic, unity, Tesla, Tencent, byte beat, MIHA tour, Facebook, apple, Microsoft, Amazon, Google, Roblox, Baidu, Xiaomi and other companies. At the same time, we also note that in the primary market, there are more young companies making innovations and attempts in relevant fields. These companies may also land in the capital market and bring investment opportunities in the future.

The background is a deep blue space filled with numerous small white stars. A prominent feature is a glowing purple ring that encircles the central text. To the right, there is a bright blue nebula or star cluster. The overall aesthetic is futuristic and cosmic.

Metaverse being the most attractive hope to Mankind

Explore and Start now

**It isn't a game
nor a escape from
reality world**

There unified standard definition and ultimate form description of the metaverse. With the continuous development of digital technology and Internet, people expect that digital technology will further develop and deepen in human society in the future, and try to describe the development form of digital life in the future. Then, the metaverse as a very attractive imagination began to attract attention.

We believe that the meta universe is not only the next generation Internet, but also the way of life of mankind in the future. The metaverse connects virtual and reality, enriches people's perception, improves experience, and extends people's creativity and more possibilities. The virtual world changes from the simulation and reproduction of the physical world to the extension and expansion of the physical world, which in turn reacts on the physical world and finally blurs the boundary between the virtual world and the real world. It is an important vision of human life style in the future.

EXPLORE VALUE

In the virtual world brought by the metaverse, with the weakening or disappearance of various types of objective conditions in the real world, each individual has the hope to rediscover and realize his self-worth

DEVELOP VALUE

On the one hand, the metaverse will bring technological accumulation and breakthroughs in multiple industries in the process of gradual approximation. On the other hand, it will also produce new industries and social operation modes in the metaverse, bringing new aggregate economy to mankind

EXPAND VALUE

With the improvement of social operation efficiency brought by the metaverse and the reproduction of real industries in the virtual world, individuals can expand their own value

CONTRIBUTE VALUE

Metaverse can bring a high degree of integration between the virtual world and the real world, further improve the social operation efficiency, and is expected to profoundly change the interaction mode of human industries

The background is a deep, dark blue space filled with numerous small, bright white and light blue stars. A prominent feature is a glowing, circular ring in the center, which has a gradient from purple to orange. To the right of the ring, there is a bright, blue, nebula-like cluster of stars. The overall aesthetic is futuristic and cosmic.

Chapter 3

REWARDS

The most important difference between metaverse and today's VR games and 3a sandbox games is that metaverse combines the virtual world and the player community into a real small society. Players are no longer simple experiencers, but also a member of a small society, constantly creating content for other users.

Every move of users will have an impact on the whole society, and the virtual universe is constantly evolving from these decisions. The change of the universe by a single user will have an intuitive impact on other players. With the joint promotion of different players, the virtual community of the meta universe has also been given social significance.

NFT (non fungible tokens), i.e. non homogenous tokens, usually refers to tokens issued by developers on Ethereum platform according to erc721 standard / protocol. The characteristics of NFT are mainly as follows:

Scarcity: generally, the number of NFTs is limited, and the extreme example is only one copy; Indivisibility: NFT cannot be traded as a whole or divided into smaller denominations.

NFT

Unique identification: NFT contains attribute information describing each token in its code, which makes them different from other tokens; Traceability: each NFT has records of transactions on the chain, from the creation time to each transaction, so as to prove its authenticity;

NFT is mainly used to prove the sole ownership of digital assets. At present, it is mainly used in games, works of art, collections, virtual assets, identity characteristics, digital music, digital certificates and other fields. The price of NFT is mainly affected by the market consensus on its NFT value, scarcity, liquidity and other factors.

The background is a deep, dark blue space filled with numerous small, bright white and light blue stars. A prominent feature is a glowing, circular ring in the center, which has a gradient from purple to orange. To the right of the ring, there is a bright, blue, nebula-like cluster of stars. The overall aesthetic is futuristic and cosmic.

Chapter 4

Overall design of the MNC project

1, Core ideas

Combined with the rapid integration and realization of existing resources of market hot spots (product scheme app + DApp, community traffic and governance + autonomy mode, overseas companies and teams),

Namely in the current market energy environment, combined with overseas resource advantages packaging project pretend ability (project appearance, project subject, capital investors, market operators are overseas institutions as the main body), fine-tuning the original community project model, build MNC virtual mining platform to gather global community traffic, and as the gripper hatch subsequent application plate projects such as GameFi, etc., eventually form the network currency linkage of global ecological platform;

2, Several principal structures

A Ecological closed loop (two-way) linkage of A-shares: Global currency-MNC-SPAC (builds batch fairy shares into good shares by installing digital assets) -Shenzhen-Hong Kong Stock Connect / Shanghai-Hong Kong Stock Connect ETF-Mainland shareholders-community;

B Structural framework of the company body: SPAC (BQEX) -Metaverse Network LLC (platform company) - "MNW". The Hong Kong (wholly owned subsidiary responsible for local business and community nodes such as MNW, HWB, MBI, etc.);

C The framework of personnel team: with overseas team leading (and exposure) + domestic team participation (and anonymous assistance), specific around: research & design, market, operation, support, logistics, consultant, organize horizontal connection and coordination at home and abroad;

D Core diversion method: 3D MNW (NFT coupon within 3D App, daily auction limited, single user account limited) -mining machine (ji) -MNC (BSC assets), that is, 4 million MNW user diversion and activation, after level 30 fission mode pull flow and MNC price; publicity perspective, metaverse platform currency (NFT, GameFi, DEFI, MNW 3D entity and other application functions), short-term zero rolling, long-term currency linkage, level 30 fission incentive;

3, Strategic Stage / milestone

A 0~1:1 month

- demo version v0.1+NFT@11.1 Recently,

-10% Start (IDO 1% is divided into two different prices: current period and 3-month regular period; 6% internal financing, 12.6 million MNC, 100 days of locked warehouse, 25 + 38 + 50 = 1 million USDT; 3% DEX IP;),

- 4 million active exist users diversion (social media + team leader);

-Basic feature version v1.0,3d + Aler + skin change;

B 1~2: + 2~3 months

-Improvised version 2.0,

-Volume of 4 million -20 million on global nodes (by pulling project communities such as HWB, MBI),

-Target 5 billion SPAC size, and opened through the currency-share linkage framework;

C 2~10: + 3~6 months

-Amplifying the two-way currency-share linkage mode to drive the global community fission,

-Integrated functional application sectors such as GameFi;

-Metaverse Network LLC shares Dividend, Red Bridge 51%; 4 million users, blockchain product perpetual support 49%

4, Product value

MNC releases 210 million @BSC (Pancake),

Effective output of 60% 126 million,

Half logic,

The upper limit mechanism,

Other overall fine-tuning;

(Specific values are given tomorrow)

5, Asset Description

-3 Use MNW auction in DApp (market independent pricing), one-time welfare auction NFT coupons, daily auction limited and single user account limited;

-Bid NFT coupon (MNW destroyed, consider friction smoothing of MNW from HECO into 3D App);

-NFT coupons are exchanged in MNC app for Meta mining machine;

-Meta mining machine output MNC on the BSC;

-Circulation of MNC on BQEX, swap, wallet, GameFi, etc;
