

DECK SPACER PROTM 5.5

Patent Pending

Space It Right.

Last Summer, I built a 7' x 140' composite wrap-around deck on my house. **5 1/2", Square Edge Composite Decking.**

After fumbling around a day with 1/8" inch mixing sticks, 16 penny nails and tape measures, I had this idea to built a hand held-two ended 1/8" spacer to save me a ton of time and inaccurate measuring.

The following day I went down to the local sheet metal shop and had a couple of rough samples made.

This is **1/8" REAL STEEL** and not a cheap plastic toy. **It works with any 5 1/2" composite OR milled deck board.**

I do product development for a living, so this wasn't a big task for me...Hence the beginning of the **Deck Spacer Pro 5.5TM.**

Now I've done a bit of remodeling and deck work in my past and I've got to tell you - this tool I've come up with really **saves time and money.** And is extremely easy to use. Push forward for 1/8", or pull plank toards you to get your 3/16".

It literally cuts fitting, assembly and measuring and fastening time in half. And with two people each using one - my deck got assembled in no time at all.

After helping friends of mine on their deck projects - **they all want one.** Actually, everyone we show this to understands it and wants one. Which is why I've decided to mass produce these and put it into the market place.

I am offering this fantastic product to all **Composite Deck Manufacturers,** and then to the Retail Market, Such as **Home Depot, Lowe's, Ace, Do-It-Best, Meeks, Menards, etc, etc.**

On line as well when the timing is right.

What a great tool for any Deck Professional, or Do-It-Yourselfer as a purchase or gift. We figure retail around \$19. to \$22. ea. **Our plan is to market in US, then Europe and Asia.**

I have manufacturing all set up with one of the largest steel manufacturers in Asia and am ready to meet any Private Label and Branding needs, for any size company. Quantities ranging from: 2,500 | 5,000 | 25,000 | 50,000 and beyond.

Please visit our website and **listen to the three instructional videos, then visit our KickStarter site link on this site and consider chipping in to give us a start.**

Looking forward...
