

Assalamu Alakum Parents, my name is Mrs. Amal, I am pleased to be working with your children in place of Mrs. Edina. I hope to be as great of an educator and mentor as Mrs. Edina. I am looking forward to teaching the class Science. I am also very proud to apart of the students' science fair projects which is coming up very soon. I will be teaching 5th, 6th, 7th, and 8th grade science. If there are any concerns, please feel free to email me at amal_a1129@yahoo.com.

This week I will be working with 5th and 6th graders on climate change. They will be learning about what is a climate change? What is causing a climate change? What is being done about climate change? They will also be learning about global warming, glaciers, the greenhouse effect, and photosynthesis. I will be giving them at least one homework assignment and then they will be tested at the end of the lesson. I will also continue to follow up with their science projects. Each week I will go over their experiments.

For 7th and 8th classes we will continue to learn about the periodic table and about the elements. We will also discuss more about the physical and chemical changes. We will also discuss more about metals, non metals, and metalloids. Once we are done with the lesson, a quiz will be given to the students weekly, so I know how well they have grasped the lesson. I will be also going over their experiments for the science fair.
