

Mrs. Amal's Science Weekly Newsletter

Week of Feb 11-15,2019

Assalamu Alaykum Dear Parents,

I would like to congratulate all the students who made it on the honor roll list. I would also like to thank all the students who came to the honor roll breakfast on Wednesday. I hope those students will continue to do well and for the other students to strive to better. On Wednesday, February 13, 2019, there will be a PTO meeting. Parents are more than welcomed to attend the meeting. This will be a good opportunity to get involved in their child's academics.

I would like to also like to see parents checking their children's' homework as well as classwork. This can give you an insight on what is being done in class. For next week, the 5th and 6th graders will continue to read earth's changing face. They will be learning about volcanos and how the earth forms. They will also be leaning about different rocks. They will be doing an activity in class by sorting rocks. They will identify the different types of rocks as well as do a worksheet.

The 7th and 8th graders will learn about balancing equations. This will be the last lesson in the chemistry unit. I will be giving them a test at the end of the week,
