SAM4POS Stock Link Feature

PLU's can be set to reduce stock levels set at another PLU. This capability has applications where multiple PLUs affect a single inventory item. For example, sales for each individual beverage items can be linked to deduct from a master PLU designated to maintain cup inventory.

This feature also has applications where inventory items are sold in a package (such as a carton of cigarettes) or may be opened and sold individually (packs). In this case, a specified quantity of inventory can be set to deduct from the stock of the designated PLU.

To use this feature:

1. Program a PLU for each individual item. In the example below PLU# (UPC#) ***84160812*** represents a *PACK* of Marlboro cigarettes and PLU# ***1111100302*** represents a *CARTON* of Marlboro cigarettes.
2. The Marlboro carton PLU is set to reduce the stock of the Marlboro pack PLU by a quantity of 10 *(Modifier QTY = 10)*.
3. Both PLUs are linked to a PLU Status Group where the option "STOCK ITEM" is checked.
4. For reporting purposes, both PLUs are given the same "Group Link#1" for tobacco items.

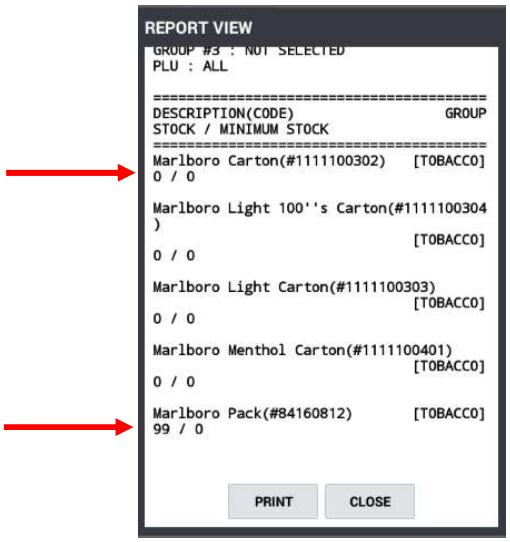
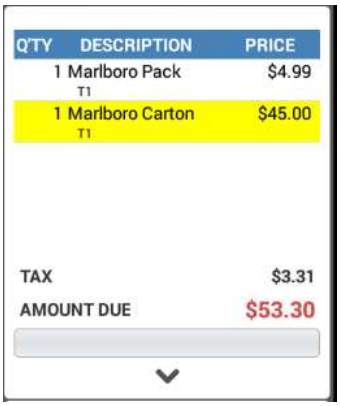
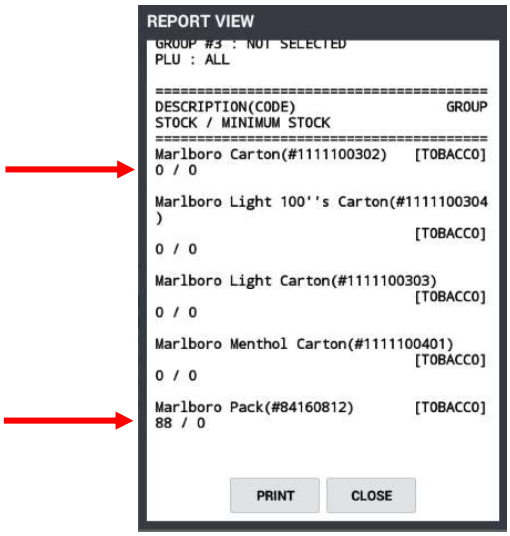
4. Note that the stock report *(Report Mode / Stock Report)* indicates the current PLU Stock counts.



5. Sales activity includes the sale of one carton and one pack of Marlboro cigarettes.





6. After the sales activity, the report now shows stock reduced by 11 units: 1-unit for the pack sold; 10-units for the carton sold.
