

Paupack and Church St Update

The current condition of Paupack St has been reviewed by DPW and representative from Leeward. The current condition of the road does not allow for any short term fix that could be implemented immediately. Temporary patching and filling of holes is recommended. Milling the road would be an option at a cost of approx. \$30,000. To complete this work it would need to be bid and that process would take several months. Milling at this time would also create problems once the road is to be repaired. It would prevent having a base to work off of. Work for Aqua will begin in June which would also nullify any temporary fix implemented by the borough. Leeward will be doing this work at which time some areas of concern could be addressed. The borough is waiting to hear from the county with regard to the awarding of bids for the repair of the road.

The borough will be doing work to correct targeted areas of Paupack and Church St starting on April 28. Those areas will be patched as conditions allow and maintained until such time as the road can be repaired.
