IMPORTANT SAFETY NOTICE

WARNING Indicates a strong possibility of severe personal injury or loss of life if instructions are not followed.

CAUTION Indicates a possibility of personal injury or equipment damage if instructions are not followed.

NOTE Gives helpful information.

Detailed descriptions of standard workshop procedures, safety principles and service operations are not included. It is important to note that this manual contains some warnings and cautions against some specific service methods which could cause PERSONAL INJURY to service personnel or could damage a vehicle or render it unsafe. Please understand that those warnings could not cover and conceivable ways in which service, whether or not recommended by Honda, might be done or of the possible hazardous consequences of each conceivable way, nor could Honda investigate all such ways. Anyone using service procedures or tools, whether or not recommended by Honda must safety himself thoroughly that neither personal safety nor vehicle safety will be jeopardized by the service methods or tools selected.
HOW TO USE THIS MANUAL

Sections 1 through 3 apply to the whole ATC, while sections 4 through 13 describe parts of the ATC, grouped according to location.

Find the section you want on this page, then turn to the table of contents on page 1 of that section.

Most sections start with an assembly or system illustration and all the required specifications, torque values, general instructions, tools and troubleshooting for the section. The subsequent pages give detailed procedures.

If you don’t know the source of the trouble, see section 14, TROUBLESHOOTING.

All information, illustrations, directions and specifications included in this publication are based on the latest product information available at the time of approval for printing. Honda Motor Co., Ltd. reserves the right to make changes at any time without notice and without incurring any obligation whatever. No part of this publication may be reproduced without written permission.

GENERAL SAFETY

**WARNING**
If the engine must be running to do some work, make sure the area is well-ventilated. Never run the engine in a closed area. The exhaust contains poisonous carbon monoxide gas.

**WARNING**
Gasoline is extremely flammable and is explosive under certain conditions. Do not smoke or allow flames or sparks in your work area.

SERVICE RULES

1. Use genuine HONDA or HONDA-recommended parts and lubricants or their equivalent. Parts that don't meet HONDA's design specifications may damage the ATC.
2. Use the special tools designed for this product to avoid damage and incorrect assembly.
3. Use only metric tools when servicing this ATC. Metric bolts, nuts, and screws are not interchangeable with English fasteners.
4. Install new gaskets, O-rings, cotter pins, and lock plates when reassembling.
5. When tightening bolts or nuts, begin with the larger-diameter or inner bolt first. Then tighten to the specified torque diagonally in 2–3 steps, unless a particular sequence is specified.
6. Clean parts in non-flammable or high flash point solvent upon disassembly.
7. Lubricate any sliding surfaces before reassembly.
8. After reassembly, check all parts for proper installation and operation.
The frame serial number is stamped on the steering head left side.

The engine serial number is stamped on the crankcase lower left side.

The carburetor identification number is stamped on the carburetor body left side.

CABLE & HARNESS ROUTING

Note the following when routing cables and wire harnesses:

- A loose wire, harness or cable can be a safety hazard. After clamping, check each wire to be sure it is secure.

- Do not squeeze wires against the weld or end of its clamp when a weld-on clamp is used.

- Secure wires and wire harnesses to the frame with their respective wire bands at the designated locations. Tighten the bands so that only the insulated surfaces contact the wires or wire harnesses.

- Route harnesses so they are not pulled taut or have excessive slack.

- Protect wires and harnesses with electrical tape or tubes if they are in contact with a sharp edge or corner. Clean the attaching surface thoroughly before applying tape.

- Do not use a wire or harness with a broken insulator. Repair by wrapping them with protective tape or replace them.

- Route wire harnesses to avoid sharp edge or corners.

- Avoid the projected ends of bolts and screws.

- Keep wire harnesses away from the exhaust pipes and other parts that get hot.

- Be sure grommets are seated in their grooves properly.

- After clamping, check each harness to be certain that it does not interfere with any moving or sliding parts.

- Wire harnesses routed along the handlebars should not be pulled taut, have excessive slack, be pinched, or interfere with adjacent or surrounding parts in all steering positions.

- After routing, check that the wire harnesses are not twisted or kinked.
NOISE EMISSION CONTROL SYSTEM

- The U.S. Environmental Protection Agency requires manufacturers to certify that vehicles built after January 1, 1983 will comply with applicable noise emission standards for one year or 1,885 miles (3,000 km) after the time of sale to the ultimate purchaser, when operated and maintained according to the instructions provided. Compliance with the terms of the Distributor's Warranty for the Honda Vehicle Noise Emission Control System is necessary in order to keep the noise emission control system in effect.

- TAMPERING WITH THE NOISE CONTROL SYSTEM IS PROHIBITED: Federal law prohibits the following acts or the causing thereof: (1) The removal or rendering inoperative by any person, other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use; or (2) The use of the vehicle after such device or element of design has been removed or rendered inoperative by any person. AMONG THOSE ACTS PRESUMED TO CONSTITUTE TEMPERING ARE THE ACTS LISTED BELOW:

1. Removal of, or puncturing the muffler, bafflers, header pipes or any other component which conducts exhaust gases.
2. Removal of, or puncturing of any part of the intake system.
3. Lack of proper maintenance.
4. Replacing any moving parts of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.
2. LUBRICATION

SERVICE INFORMATION

GENERAL
Oil filter screen and oil pump inspection and maintenance can be made without removing the engine.

TROUBLESHOOTING

Oil level too low
- External oil leaks
- Worn valve guide or seal
- Worn piston rings

Oil contamination
- Oil not changed often enough
- Head gasket faulty
- Worn piston rings
ENGINE OIL LEVEL

Place the ATC on level ground.
Start the engine and let it idle for 2–3 minutes.
Stop the engine.
Check the oil with the oil cap/dipstick.
Do not screw in the cap when making this check.

If the level is below the lower level mark on the dipstick, fill to the upper level mark with the recommended oil (Page 2-1).

ENGINE OIL CHANGE

NOTE:
Drain the oil with the engine warm.

Remove the oil cap/dipstick and drain plug, and drain the oil.

With the engine switch “OFF”, pull the recoil starter several times to completely drain any residual oil.

Install the drain plug.

NOTE:
Check the condition of the sealing washer.
If it is damaged, replace it with a new one.

Clean the oil filter rotor.
Fill the crankcase with the recommended grade of oil (Page 2-1).

ENGINE OIL CAPACITY:
0.7 lit (0.74 US qt, 0.62 Imp qt) after draining

Install the oil filler cap.
Start the engine and let it idle for 2–3 minutes.
Stop the engine.

With the ATC on level ground, make sure that the oil level is at the upper level mark and that there are no leaks.

OIL FILTER ROTOR AND SCREEN

NOTE:
Clean the oil filter rotor before adding oil.

Remove the right crankcase (Page 8-2).
Remove the clutch lever, cam and outer cover (Page 8-3). Clean the clutch outer cover and the inside of the clutch outer using clean lint-free cloth.

**NOTE:**
- Do not allow dust and dirt to enter the crankshaft oil passage.
- Do not use compressed air.

Remove the oil filter screen from the crankcase. Clean the filter screen.

Install the clutch outer cover, cam and lever and right crankcase covers (Page 8-10). Fill the engine with recommended grade of oil (Page 2-1).

**OIL PUMP**

**REMOVAL**

**NOTE:**
- The oil pump can be removed with the engine mounted in the frame.

Remove the oil drain plug and drain the oil from the engine (Page 2-2). Remove the right crankcase cover (Page 8-2). Remove the clutch assembly (Page 8-3).
LUBRICATION

Remove the three oil pump screws and oil pump.

INSPECTION
Remove the oil pump body cover by removing the three screws.

Measure the rotor tip clearance.
SERVICE LIMIT: 0.25 mm (0.010 in)
Measure the pump body clearance.
SERVICE LIMIT: 0.20 mm (0.008 in)

Place the oil pump cover gasket.
Measure the rotor end clearance.
SERVICE LIMIT: 0.12 mm (0.005 in)

DISASSEMBLY
Remove the drive shaft.

Remove the inner and outer rotors.

ASSEMBLY
Install the outer and inner rotors.
Insert the drive shaft and align the flat on the shaft with the flat in the inner rotor. The flats should face each other.

Install the pump body cover gasket and cover.

NOTE:
Make sure that the pump rotates freely without binding.

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
INSTALLATION

Install the oil pump with the gasket under it aligning the pump drive shaft with the slot in the cam chain guide spindle.

Install the clutch assembly (Page 8-9).

Install the right crankcase cover, kick starter pedal, muffler and foot pegs/side stand assembly.

Adjust the clutch (Page 3-12).

Fill the crankcase with the recommended engine oil (Page 2-1).
LUBRICATION POINTS

Use general purpose grease when not specified here.

Apply oil or grease to the other sliding surfaces not shown here.

CONTROL CABLE LUBRICATION

Periodically disconnect the throttle, and front brake cables at their upper ends. Thoroughly lubricate the cables and their pivot points with a commercially available cable lubricant.
### SERVICE INFORMATION

#### MAINTENANCE SCHEDULE
- 3-T1: THROTTLE OPERATION
- 3-10: CYLINDER COMPRESSION
- 3-11: DRIVE CHAIN
- 3-12: BRAKE SHOES
- 3-13: BRAKE SYSTEM
- 3-12: CLUTCH
- 3-13: SPARK ARRESTER CLEANING
- 3-13: NUTS, BOLTS, FASTENERS
- 3-13: TIRES
- 3-14: STEERING HEAD BEARINGS

#### SERVICE INFORMATION

**SPECIFICATIONS**

- **Ignition timing:**
  - Initial: $25^\circ \pm 2^\circ$ BTDC at idle
  - Contact point gap: $0.3-0.4$ mm (0.012-0.016 in)
- **Spark plug:**
  - Spark plug gap: $0.6-0.7$ mm (0.024-0.028 in)
  - Recommended spark plugs: CR7HS (NGK), U22FSR-L (NGK)
- **Valve clearance (cold):**
  - Intake/Exhaust: $0.05$ mm (0.002 in)
  - Throttle lever free play: $5-10$ mm (3/16-3/8 in)
  - Idle speed: $1,500 \pm 100$ rpm
- **Cylinder compression:**
  - Standard: $1,200 \pm 150$ kPa (12.0 ± 1.5 kg/cm², 170.64 ± 21.33 psi)
  - Service limit: $900$ kPa (9.0 kg/cm², 127.98 psi)
- **Brake lever free play:**
  - $15-20$ mm (5/8-3/4 in)
- **Drive chain free play:**
  - $10-20$ mm (3/8-3/4 in)
- **Drive chain length (72 pins):**
  - Standard: $901.7$ mm (35.5 in)
  - Service limit: $919.7$ mm (36.2 in)
- **Front/rear rim size:**
  - $6.5 \times 7.0$
- **Front/rear tire size:**
  - $16 \times 8.0-7$
- **Front/rear tire pressure:**
  - $2.2$ psi (0.15 kg/cm², 15 kPa)
- **Front/rear tire circumference:**
  - Standard: $1,290$ mm (50.7 in)
TORQUE VALUES
Spark plug: 12–19 N·m (1.2–1.9 kg·m, 9–14 ft·lb)
Valve inspection cap: 10–14 N·m (1.0–1.4 kg·m, 7–10 ft·lb)
Drive chain adjuster nut: 25–35 N·m (2.5–3.5 kg·m, 18–25 ft·lb)
Clutch adjuster lock nut: 8–12 N·m (0.8–1.2 kg·m, 6–9 ft·lb)
Valve adjuster lock nut: 7–10 N·m (0.7–1.0 kg·m, 5–7 ft·lb)

TOOLS
Common
Valve Adjuster B
Valve Adjuster Wrench, 8 x 9 mm

07708–0030400 or 089201–200–000 (U.S.A. only)
07908–GE00200 or equivalent commercially available in U.S.A.
MAINTENANCE SCHEDULE

The maintenance intervals shown in the following schedule are based upon average riding conditions. ATC's subjected to severe use, or ridden in unusually wet or dusty areas, require more frequent servicing. Items marked * should be serviced by an authorized Honda dealer, unless the owner has the proper tools and is mechanically proficient. Other maintenance items are simple to perform and may be serviced by the owner.

Perform the Pre-ride Inspection in the Owner’s Manual at each scheduled maintenance period.

I: Inspect and Clean, Adjust, Lubricate or Replace, if necessary.
C: Clean
R: Replace
A: Adjust
L: Lubricate

</table>

NOTES:
1. Replace every 30 operating days or every 3 months, whichever occurs first.
2. Service more frequently when riding in areas of dust, sand or snow.
3. Service more frequently after riding in very wet or muddy condition.
CONTACT POINTS AND IGNITION TIMING

CONTACT POINT INSPECTION
Remove the recoil starter (Page 9-2).
Remove the starter driven pulley (Page 9-7).

Inspect the contact point surface.
If the contact surface are level but grayish in color or slightly pitted, file them lightly.

If the point have noticeable transfer of metal from one surface to the other, have evidence of heavy arcing, or are worn at an angle, the point set should be replaced.

Turn the flywheel counterclockwise to obtain maximum point gap and measure the point gap with the filler gauge.

POINT GAP: 0.3–0.4 mm (0.012–0.016 in)

If the contact point gap is incorrect, loosen the locking screw and adjust the point gap.
Clean the contact point surface with an electrical contact cleaner to remove any oil film or dust.

IGNITION TIMING INSPECTION
Disconnect the alternator wire connector.
Connect the continuity light between the battery positive terminal and alternator wire (Black).
Connect the battery negative cable to the frame ground.

Slowly rotate the flywheel counterclockwise.
As the “F” mark on the flywheel aligns with the index mark on the crankcase, the point should be open and the light becomes dim.
If the ignition timing is incorrect, loosen the contact point locking screw and adjust contact point gap.
Increasing point gap: Advance ignition timing
Decreasing point gap: Retard ignition timing

Tighten the locking screw.

NOTE:
- Replace the contact point if the specified point gap cannot be maintained to obtain the correct ignition timing.
- Use stroboscopic timing light to determine accurate ignition timing.

AIR CLEANER

Remove the case cover cap nut and remove the cover and gasket.

Separate the set plate and inner pipe from the element.
Pull the element from the air cleaner case.
Wash the element in non-flammable or high flash point solvent, squeeze out the solvent thoroughly, and allow to dry.

Soak the element in gear oil (SAE #80—#90) and squeeze out the excess.

Install the element in the air cleaner case with the set plate and inner pipe.
Install the gasket, cover and capnut.

SPARK PLUG

Disconnect the spark plug cap and remove the spark plug.

Visually inspect the spark plug electrodes for wear. The center electrode should have square edges and the side electrode should have a constant thickness. Discard the spark plug if there is apparent wear or if the insulator is cracked or chipped. Measure the gap with a feeler gauge and adjust by carefully bending the side electrode.

SPARK PLUG GAP:
0.6—0.7 mm (0.024—0.028 in)

RECOMMENDED SPARK PLUG:
CR7HS (NGK)
U22FSR-L (ND)

Check the sealing washer and replace with a new one if damaged.

With the sealing washer attached, thread the spark plug in by hand to prevent cross threading.

Tighten the spark plug to the specified torque.
TORQUE: 12—19 N·m (1.2—1.9 kg·m, 9—14 ft·lb)

Connect the spark plug cap.
VALVE CLEARANCE

NOTE:
Inspect and adjust valve clearance while the engine is cold (below 35°C, 95°F).

Remove the recoil starter (Page 9-2).
Remove the valve inspection caps.

Turn the flywheel counterclockwise and align the "T" mark with the index mark.
Make sure the piston is T.D.C. on the compression stroke.

Check the valve clearances by inserting a feeler gauge between the adjusting screw and valve stem.

VALVE CLEARANCES
INTAKE/EXHAUST: 0.05 mm (0.002 in)

Adjust by loosening the lock nut and turning the adjusting screw until there is a slight drag on the feeler gauge.

Hold the adjusting screw and tighten the lock nut.
TORQUE: 7—10 N·m (0.7—1.0 kg·m, 5—7 ft·lb)

Recheck the valve clearance.

Install the recoil starter and valve inspection caps and tighten the caps.
TORQUE: 10—14 N·m (1.0—1.4 kg·m, 7—10 ft·lb)

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
CARBURETOR IDLE SPEED

NOTE:
- Inspect and adjust carburetor idle speed. All other engine adjustments are within specification.
- The engine must be warm for accurate idle inspection and adjustment.

Connect a tachometer.
Warm up the engine.
Stop and go driving for ten minutes is sufficient.
Shift the transmission to NEUTRAL.

Turn the throttle stop screw as required to obtain the specified idle speed.

**IDLE SPEED: 1,500 ± 100 rpm**

FUEL LINES

Check the fuel lines for deterioration, damage or leakage and replace if necessary.

FUEL FILTER

Turn the fuel valve OFF.
Drain the fuel from the float chamber by turning the drain screw.
Remove the two screws and remove the fuel valve.
Remove the O-ring and filter screen.

**WARNING**

Gasoline is flammable and is explosive under certain conditions. Do not smoke or allow flames or sparks near the equipment while draining fuel.

Wash the filter screen in clean non-flammable or high flash point solvent.
Reinstall the filter screen and new O-ring into the carburetor.
Reinstall the fuel valve making sure the O-ring is in place.
After installing, turn the fuel valve ON and check that there are no fuel leaks.

**THROTTLE OPERATION**

Check for smooth throttle lever full opening and automatic full closing in all steering positions.

Make sure there is no deterioration, damage or kinking in the throttle cable.
Replace any damaged parts.

Disconnect the throttle cable at the upper end (Page 11-3).
Thoroughly lubricate the cable and pivot point with a commercially available cable lubricant to prevent premature wear.

Install the throttle cable in the reverse order of removal.

Make sure the throttle lever free play is 5–10 mm (3/16–3/8 in) at the tip of the throttle lever.

**ADJUSTMENT**

Slide the rubber cap of the adjuster on the carburetor top.

Adjust the throttle lever free play by turning the adjuster on the carburetor.

Install the adjuster rubber cap securely.
CYLINDER COMPRESSION

Warm up the engine.
Stop the engine and remove the spark plug.
Insert a compression gauge.

Raise the choke lever all the way up.
Fully open the throttle.
Operate the recoil starter several times.

NOTE:
Watch for compression leaks at the gauge connection.

COMPRESSON:
STANDARD:
1,200 ± 150 kPa
(12.0 ± 1.5 kg/cm², 170.64 ± 21.33 psi)

SERVICE LIMIT:
900 kPa (9.0 kg/cm², 127.98 psi)

DRIVE CHAIN

Stop the engine and put the transmission in NEUTRAL.
Remove the drive chain inspection hole cap.

Check the amount of chain free play through the inspection hole.
CHAIN FREE PLAY: 10–20 mm (3/8–3/4 in)

ADJUSTMENT

Stand the ATC on its rear carrier and rear wheels.

CAUTION:
To prevent fuel spillage, if the fuel tank is more than half full, either drain some fuel or remove the tank (Page 4-3).

Loosen the lock nut and adjust nut and adjust the drive chain free play.
Tighten the lock and adjust nut.
TORQUE: 25–35 N-m (2.5–3.5 kg-m, 18–25 ft-lb)
Remove the rubber cap from the top of the drive chain cover and lubricate the drive chain with a commercially chain lubricants.

After lubricating the drive chain be sure to install the rubber cap.

Remove the drive chain cover by removing the four bolts and inspect the driven sprocket teeth for excessive wear or damage. Replace if necessary.

**NOTE:**

Never install a new drive chain on worn sprockets or a worn chain on new sprockets. Both chain and sprockets must be in good condition, or the new replacement chain or sprockets will wear rapidly.

To remove the drive chain, remove the drive chain cover and left crankcase cover (Page 9-7).

**BRAKE SHOES**

Replace the brake shoes if the indicator plate aligns with the brake panel index mark when the brake lever is applied.
MAINTENANCE

BRAKE SYSTEM

Check the brake lever and cable for excessive play or other damage. Replace or repair as necessary.

Measure the brake lever free play at the end of the brake lever.
FREE PLAY: 15–20 mm (5/8–3/4 in)

Adjust the brake lever free play by turning the adjuster nut.

NOTE:
Make sure the cut-out of the adjuster is seated on the brake arm pin.

CABLE LUBRICATION
Loosen the brake adjuster and disconnect the brake cable at the lever.

Lubricate the cable and their pivot point with a commercially available cable lubricant.

Install the brake cable in the reverse order of removal and recheck the brake lever free play.

CLUTCH

Stop the engine.
Remove the adjuster cap.
Loosen the clutch adjusting screw lock nut.

Slowly turn the adjusting screw counterclockwise until resistance is felt.

Then turn the adjusting screw clockwise 1/8 turn, and tighten the lock nut.

After adjustment, start the engine and check for proper clutch operation.

Install the adjuster cap.

3-12
SPARK ARRESTER CLEANING

WARNING
- Do not remove and install the spark arrester while the exhaust pipe is hot.
- Perform this operation in a well ventilated area, free from fire hazard.
- Use adequate eye protection.

Remove the spark arrester bolt and pull out the spark arrester.
Remove any accumulated carbon from the spark arrester.

Start the engine and remove accumulated carbon from the exhaust system by momentarily revving up the engine several times.

Stop the engine and reinstall the spark arrester.

NUTS, BOLTS, FASTENERS

Tighten bolts, nuts and fasteners at regular intervals shown in the Maintenance Schedule (Page 3-3).

Check that all chassis nuts and bolts are tightened to their correct torque values (Page 1-5). Check that all cotter pins and safety clips are in place.

TIRES

Check the tire for cuts, imbedded nails, or other sharp objects.

NOTE:
- Tire pressure should be checked when the tires are COLD.

Check the tire pressure.

TIRE PRESSURES:
Recommended pressure:
  2.2 psi (0.15 kg/cm², 15 kPa)
Minimum pressure:
  1.7 psi (0.12 kg/cm², 12 kPa)
Maximum pressure:
  2.6 psi (0.18 kg/cm², 18 kPa)

Raise up the rear wheel and check the tire circumference.

STANDARD TIRE CIRCUMFERENCE:
  1,290 mm (50.7 in)
MAINTENANCE

STEERING HEAD BEARINGS

NOTE:

Make sure the cables do not interfere with the rotation of the handlebar.

Raise the front wheel off the ground and make sure that the handlebar rotates freely.

If the handlebar moves unevenly, binds or has vertical movement, adjust the steering head bearing by turning the bearing adjustment nut (Page 11-15).

HEAD BEARINGS
4. FUEL SYSTEM

SERVICE INFORMATION

GENERAL

**WARNING**

Use caution when working with gasoline. Always work in a well ventilated area away from sparks or flames.

- When disassembling fuel system parts, note the locations of the O-rings. Replace them during reassembly.

TROUBLESHOOTING

Engine cranks but won't start.
- No fuel in tank
- No fuel to cylinder
- Too much fuel getting to cylinder
- No spark at plug (ignition malfunction)
- Air cleaner clogged

Engine idles roughly, stalls, or runs poorly
- Idle speed incorrect
- Ignition malfunction
- Rich mixture
- Lean mixture
- Air cleaner dirty
- Insulator leaks

Lean mixture
- Carburetor fuel jet clogged
- Fuel cap vent blocked
- Fuel filter clogged
- Fuel line kinked or restricted
- Float valve faulty
- Float level too low

Rich mixture:
- Carburetor choke stuck closed
- Float valve faulty
- Float level too high
- Carburetor air jet clogged
- Air cleaner dirty
FUEL TANK

REMOVAL

Remove the seat/fender by removing the four bolts shown.

Turn the fuel valve OFF.
Remove the fuel valve (Page 3-8).
Remove the fuel tank mount bolt and fuel tank.

WARNING

Keep gasoline away from flames or sparks.
Wipe up spilled gasoline at once.

Using a drain pan, check for fuel flow out of the fuel valve. If flow is restricted, clean the fuel strainer (Page 3-9).

INSTALLATION

Install the fuel tank. Install the fuel valve onto its body.
Install the seat.

NOTE:

• Be sure the front fuel tank brackets are on the rubber cushions.
• After assembly, check fuel leaks.

AIR CLEANER CASE

Remove the intake pipe mount bolts.
Loosen the air cleaner connecting tube band.
Disconnect the air vent tube from carburetor.
Remove the carburetor.
Open the wire clamp.
Remove the air cleaner case mount bolt.
Remove the upper engine mount nut.
Remove the air cleaner case.

For air cleaner service, refer to page 3-5.

CARBURETOR REMOVAL

Remove the carburetor top from the carburetor.

Turn the fuel valve OFF and remove the fuel valve by removing the two screws.
Disconnect the air vent tube and drain tube from the carburetor.
Loosen the air cleaner tube band.
Remove the following:
– Intake pipe attaching bolts to the carburetor.
– Intake pipe mount bolts.
– Intake pipe and insulator.
– Carburetor.

THROTTLE VALVE DISASSEMBLY

Remove the throttle cable from the throttle valve while depressing the throttle valve spring.

Remove the needle clip retainer.
Remove the jet needle and needle clip.

Inspect the throttle valve and jet needle surface for dirt, scratches or wear.
FLOAT CHAMBER DISASSEMBLY

Remove the screws and remove the float chamber.

Remove the float arm pin, float and float valve.

Inspect the float valve and seat for wear or damage.
Remove the slow jet.
Remove the main jet, needle jet holder and needle jet.

Before removing the pilot screw, record the number of turns until the screw seats lightly.

CAUTION:
Damage to the pilot screw seat will occur if the pilot screw is tightened against the seat.

Then remove the screw.
Inspect the pilot screw, needle jet, needle jet holder and main jet.
Check each parts for wear or damage.

Clean the passages and jets with compressed air.

CARBURETOR ASSEMBLY

Clean all parts high flash point solvent and blow dry with compressed air.

Carburetor assembly is essentially the reverse order of disassembly.

NOTE:
- Use new O-rings whenever the carburetor is reassembled.
- Handle all jets and needles with care. They can easily be scored or damaged.
- Set the pilot screw at the position recorded during disassembly.

After assembly, turn on the fuel valve and check for leaks.
Adjust idle speed (Page 3-8) and throttle grip free play (Page 3-9).
FUEL SYSTEM

FLOAT LEVEL ADJUSTMENT

Measure the float level with a float level gauge as shown.

FLOAT LEVEL: 10.7 mm (0.42 in)

To adjust the level, bend the float arm carefully until the float tip just contacts the float valve.

CARBURETOR INSTALLATION

Install the intake pipe, insulator and carburetor.

TORQUE: 6–9 N-m (0.6–0.9 kg-m, 4.5–7 ft-lb)

Install the carburetor in the reverse order of removal.

NOTE:

After installing the carburetor, perform the following adjustments:
- Throttle lever free play (Page 3-9).
- Carburetor pilot screw adjustment (Page 4-9), if the carburetor was overhauled or cleaned.

THROTTLE VALVE ASSEMBLY

Install the needle clip on the jet needle.

STANDARD SETTING: 4th groove

Install the jet needle into the throttle valve and secure it with the needle clip retainer.
Install the throttle cable, spring, and throttle valve.

FLOAT LEVEL GAUGE
07401-0010000

THROTTLE VALVE

JET NEEDLE

CLIP
NEEDLE CLIP RETAINER

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
Align the throttle valve groove with the throttle stop screw and install the carburetor top onto the carburetor. Adjust throttle lever free play (Page 3-9).

**PILOT SCREW ADJUSTMENT**

**NOTE:**

The pilot screw is factory pre-set. Adjustment is not necessary unless the carburetor is overhauled or cleaned.

**CAUTION:**

*Damage to the pilot screw seat will occur if the pilot screw is tightened against the seat.*

Turn the pilot screw clockwise until it seats lightly and back it out 1 3/4 turns. This is an initial setting prior to the final pilot screw adjustment.

Warm the engine up to operating temperature.

Stop the engine and connect a tachometer.

Start the engine and adjust the idle speed with the throttle stop screw.

**IDLE SPEED: 1,500 ± 100 rpm**

Turn the pilot screw in slowly until the engine stops, and then back it out 1 turn. Start the engine and readjust the idle speed with the throttle stop screw, if necessary.
19–25 N·m
(1.9–2.5 kg·m, 14–18 ft·lb)

19–25 N·m
(1.9–2.5 kg·m, 14–18 ft·lb)
SERVICE INFORMATION

GENERAL
The only operation requiring engine removal is transmission and crankshaft service.

SPECIFICATIONS
Engine oil capacity
- 0.8 lts (0.85 US qt, 0.70 Imp qt) after disassembly
- 0.7 lts (0.74 US qt, 0.62 Imp qt) after draining

TORQUE VALUES
- Foot peg bolt: 19–25 N·m (1.9–2.5 kg·m, 14–18 ft·lb)
- Gearshift pedal bolt: 7–12 N·m (0.7–1.2 kg·m, 5–9 ft·lb)
- Engine hanger bolt: 19–25 N·m (1.9–2.5 kg·m, 14–18 ft·lb)
ENGINE REMOVAL

Remove the drive chain cover (Page 12-7).
Remove the recoil starter (Page 9-2).
Remove the left crankcase cover (Page 8-2).

Remove the spark plug cap from the spark plug.
Remove the exhaust pipe (Page 12-11).
Remove the foot peg (Page 12-12).

Remove the drive chain (Page 12-7).
Remove the intake pipe mount bolts.
Open the wire clamp and disconnect the wires.
Place the floor jack or other adjustable support under the engine.

Remove the upper and lower engine hanger nuts. Remove the engine hanger bolts from the left side.

Carefully lower the engine and remove it.

**ENGINE INSTALLATION**

Engine installation is essentially the reverse order of removal.

Use a floor jack or other adjustable support to carefully maneuver the engine into place.

Tighten the engine upper and lower hanger bolts.

**TORQUE:** 19–25 N-m (1.9–2.5 kg-m, 14–18 ft-lb)

Install the foot peg and tighten four bolts.

**TORQUE:** 19–25 N-m (1.9–2.5 kg-m, 14–18 ft-lb)

Install the gearshift pedal and tighten the bolt.

**TORQUE:** 7–12 N-m (0.7–1.2 kg-m, 5–9 ft-lb)

Install the intake pipe with new gasket and two bolts and tighten the bolts.

**NOTE:**

- Route the wires and cables properly (Page 1-8).
- Fill the crankcase to the proper level with the recommended oil (Page 2-1).
- Adjust the throttle lever free play (Page 3-9) and clutch (Page 3-12).
6. CYLINDER HEAD/VALVE

SERVICE INFORMATION

GENERAL
- This section covers maintenance and inspection of the cylinder head, valves, camshaft and rocker arms. These services can be done with the engine installed.
- Camshaft and rocker arm lubricating oil is fed through oil passages. Be sure the passages are not clogged.
- During assembly, apply molybdenum disulfide grease to the camshaft bearings to provide initial lubrication.
- Be sure to use new O-ring and dowel pins when installing the cylinder head.

TOOLS
Special
Valve Guide Reamer 07984-0980000

Common
Valve Guide Remover, 5.5 mm 07742-0010100 or 07942-3290100
Valve Spring Compressor 07757-0010000 or 07957-3290001

TORQUE VALUES
Cylinder head nut 9–12 N·m (0.9–1.2 kg·m, 7–9 ft·lb)
Cam chain sprocket 5–9 N·m (0.5–0.9 kg·m, 4–7 ft·lb)
Valve inspection cap 10–14 N·m (1.0–1.4 kg·m, 7–10 ft·lb)

TROUBLESHOOTING

Performance problems related to the cylinder head can usually be diagnosed by a compression test, or noise problems which can be traced with a sounding rod or stethoscope.

Low Compression
- Valves
  - Incorrect valve adjustment
  - Burned or bent valves
  - Incorrect valve timing
  - Broken valve spring
- Cylinder head
  - Leaking or damaged head gasket
  - Warped or cracked cylinder head
- Cylinder and piston (Refer to Section 7)

High Compression
- Excessive carbon build-up on piston head or combustion chamber

Excessive Noise
- Incorrect valve adjustment
- Sticking valve or broken valve spring
- Damaged or worn camshaft
- Loose or worn cam chain
- Worn or damaged cam chain tensioner
- Worn cam sprocket teeth
CYLINDER HEAD REMOVAL

Remove the recoil starter (Page 9-2).
Turn the flywheel counterclockwise and align the T mark with the index mark.
Remove the cam chain tensioner sealing bolt (Page 9-9).

Remove the front fender.
Remove the cam sprocket cover bolt and cover from the left side of the cylinder head.

Hold the flywheel and remove the three attaching bolts and the cam sprocket.
Remove the exhaust pipe (Page 12-11). Remove the four cylinder head cover nuts and cylinder head cover.

Disconnect the spark plug cap from the spark plug.

Remove the intake pipe mount bolts.

Remove the cylinder head mount bolt. Deflate the front tire to provide clearance to remove the cylinder head.

Remove the cylinder head.

Remove the head gasket, O-rings and dowel pins.
CYLINDER HEAD DISASSEMBLY

Remove the cylinder head side cover and gasket.
Remove the valve inspection caps and O-rings.

Screw an 8 mm bolt into the rocker arm shafts and pull the shafts out of the cylinder head.
Remove the rocker arms.

Remove the camshaft aligning the cam lobes with the cylinder head cutouts.
Remove the valve spring cotters, retainers, springs and valves.

**CAUTION:**

To prevent loss of tension, do not compress the valve springs more than necessary to remove the cotters.

Remove valve spring seats, stem seal caps and stem seals.

Remove carbon deposits from the combustion chamber.

Clean off the head gasket surface.

**NOTE:**

- Avoid damaging the gasket surface.
- Gasket material will come off easier if soaked in solvent.

**INSPECTION**

Inspect the rocker arms for damage, wear or clogged oil holes.

Measure the I.D. of the rocker arm.

**SERVICE LIMIT:** 10.10 mm (0.398 in)

**ROCKER ARM SHAFT INSPECTION**

Inspect the rocker arm shaft for wear or damage.

Measure the O.D. of the rocker arm shaft.

**SERVICE LIMIT:** 9.91 mm (0.390 in)
Using a micrometer, measure the cam lobes. Check for wear or damage.

**SERVICE LIMIT:** 25.69 mm (1.011 in)

Measure and record the camshaft journal O.D. Measure and record the camshaft bearing I.D. in the cylinder head. Determine the camshaft bearing oil clearance.

**SERVICE LIMIT:** 0.05 mm (0.002 in)

Measure the length of the inner and outer valve springs.

**SERVICE LIMIT:**
- Inner: 23.9 mm (0.94 in)
- Outer: 26.9 mm (1.06 in)
Check spark plug hole and valve area for cracks.
Check the cylinder head for warpage with a straight edge and feeler gauge.

**SERVICE LIMIT:** 0.05 mm (0.002 in)

Inspect each valve for bending, burning, scratches or abnormal stem wear.
Check valve movement in the guide.
Measure and record each valve stem O.D.

**SERVICE LIMIT:** IN/EX: 5.40 mm (0.213 in)

**NOTE:**

- Ream the guide to remove any carbon build-up before checking the valve guide I.D.
- Measure and record each valve guide I.D. using a small hole gauge or inside micrometer.

**SERVICE LIMIT:** IN/EX: 5.50 mm (0.217 in)

Determine the stem-to-guide clearance.

**SERVICE LIMIT:** IN: 0.08 mm (0.003 in)  
EX: 0.10 mm (0.004 in)

**NOTE:**

- If the stem-to-guide clearance exceeds the service limits, determine if a new guide with standard dimensions would bring the clearance within tolerance. If so, replace the guides as necessary and ream to fit.
- If the valve guides is replaced, the valve seat must be refaced.

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
VALVE GUIDE REPLACEMENT

Support the cylinder head and drive the guide out from the port side.

NOTE:
- When driving out the valve guide, do not damage the head.

Install a new oversize valve guide from the top of the head.

Ream the new valve guide after installation.

NOTE:
- Use cutting oil on the reamer during this operation.
- Rotate the reamer in the same direction when inserting and removing it.

Reface the valve seat (Page 6-10).
Clean the cylinder head thoroughly to remove any metal particles.
VALVE SEAT INSPECTION/REFACING

Clean both intake and exhaust valve thoroughly to remove carbon deposits. Apply a light coating of valve lapping compound to each valve face. Lap each valve and seat using a rubber hose or other hand-lapping tool.

NOTE:

Take care not to allow the compound to enter between the valve stem and guide. After lapping, wash out the compound completely and apply a coat of engine oil to the valve face and seat.

Remove and inspect the each valves. Measure the width of the each valve face.

SERVICE LIMIT: 1.6 mm (0.06 in)

CAUTION:

The valves cannot be ground. If the valve face is rough, worn unevenly, or contacts the seat improperly, the valve must be replaced.

Measure the valve seat.

SERVICE LIMIT: 1.6 mm (0.06 in)
If the seat is too wide, too narrow, or has low spots, the seat must be refaced to seal properly.
VALVE SEAT GRINDING

Use a 45 degree cutter to remove any roughness or irregularities from seat.

NOTE:
- Reface the seat with a 45 degree cutter when the valve guide is replaced.

Use a 32 degree cutter to remove 1/4 of the existing valve seat material.

NOTE:
- Follow the instructions supplied with the Valve Seat Refacing Equipment.

Use a 60 degree cutter to remove the lower 1/4 of the old seat. Remove the cutter and inspect the area you have just cut.

Install a 45 degree finish cutter and cut the seat to the proper width.

NOTE:
- Make sure that all pitting and irregularities are removed. Refinish if necessary.
Apply a thin coating of Prussian Blue to the valve seat.

Without rotating the valve, insert the valve through the valve guide and onto the seat to make a clear pattern.

**NOTE:**

The location of the valve seat in relation to the valve face is very important for good sealing.

If the contact area is too high on the valve, the seat must be lowered using a 32 degree flat cutter.

If the contact area is too low on the valve, the seat must be raised using a 60 degree inner cutter.

Refinish the seat to specifications using a 45 degree seat cutter.

After cutting the seat, apply lapping compound to the valve face and lap the valve using light pressure.

**NOTE:**

Take care not to allow the compound to enter between the valve stem and guide.

After lapping, wash all residual compound off the cylinder head and valve.

---

**CYLINDER HEAD ASSEMBLY**

Install new valve stem seals.

Lubricate each valve stem with molybdenum disulfide grease and insert the valve into the valve guide.

**NOTE:**

- Install the new valve stem seals when assembly.
- To avoid damage to the stem seal, turn the valve slowly when inserting.

Install the valve springs and retainers.
Install the valve cotters.

CAUTION:

To prevent tension loss, do not compress the valve spring more than necessary to install the valve cotters.

Tap the valve stem gently with a soft hammer to firmly seat the valve cotters.

CAUTION:

Support the cylinder head above the work bench surface to prevent possible valve damage.

Install the camshaft with the camshaft hole facing down for easy camshaft sprocket installation.

Apply a thin coat of engine oil to the rocker arm shafts.

Install the rocker arms and shafts with the threaded ends facing out.
Install the cylinder head side cover using a new gasket.

CYLINDER HEAD INSTALLATION

Turn the flywheel and place a shop towel in the cylinder and oil hole. Remove and clean off the head gasket surface.

Install a new gasket, O-rings and dowel pins.
Install the cylinder head.
Tighten the cylinder head mount bolt.
**TORQUE:** 10–14 N·m (1.0–1.4 kg·m, 7–10 ft·lb)

Install the cylinder head cover with the arrow facing down (exhaust pipe side).

**NOTE:**
Be sure to installing the sealing washers, copper washer, cap nuts and nut on the cylinder head cover as shown.

Tighten the cylinder head nuts and bolt in a criss-cross pattern in 2–3 steps.
**TORQUE:** 9–12 N·m (0.9–1.2 kg·m, 7–9 ft·lb)

Install the intake pipe mount bolts (Page 4-8).
Install the exhaust pipe (Page 12-11).

Turn the flywheel counterclockwise and align the T mark with the index mark.

Place the cam chain over the camshaft sprocket aligning the O-mark on the camshaft sprocket with the index mark on the cylinder head.
Install the camshaft sprocket.
Hold the flywheel and tighten the cam sprocket bolts.
**TORQUE:** 5–9 N·m (0.5–0.9 kg·m, 4–7 ft·lb)
Install the camshaft sprocket cover aligning the tang with the cylinder head notch.

Install the spark plug cap.
Adjust the valve clearance (Page 3-7).
Install the recoil starter (Page 9-6).
Install the cam chain tensioner sealing bolt (Page 9-11).
Install the front fender (Page 11-12).
Inflate the front tire to the recommended pressure.

RECOMMENDED TIRE PRESSURE:
2.2 psi (15 kPa, 1.5 kg-cm²)
9-14 N·m
(0.9-1.4 kg·m, 6.5-10 ft·lb)

10-14 N·m
(1.0-1.4 kg·m, 7-10 ft·lb)
7. CYLINDER/PISTON

SERVICE INFORMATION

GENERAL

- Cylinder/piston maintenance and inspection can be performed with the engine installed.
- Camshaft and rocker arm lubricating oil is fed through cylinder oil passages. Be sure the passages are not clogged.

TORQUE VALUES

Guide roller pin bolt | 9–14 N·m (0.9–1.4 kg·m, 6.5–10 ft·lb)
Cylinder mount bolt | 10–14 N·m (1.0–1.4 kg·m, 7–10 ft·lb)

TROUBLESHOOTING

Compression low
- Worn cylinder or piston rings

Excessive smoke
- Worn cylinder or piston rings
- Improper installation of piston rings
- Scored or scratched piston or cylinder wall

Overheating
- Excessive carbon build-up on the piston or combustion chamber wall

Knocking or abnormal noise
- Worn piston and cylinder
- Excessive carbon build-up

Date of Issue: June, 1984

CYLINDER/PISTON

CYLINDER REMOVAL

Remove the cylinder head (Section 6).
Remove the cylinder mount bolt.
Remove the guide roller pin and guide roller.
Remove the cylinder.

Remove the O-ring, gasket and dowel pins.

INSPECTION

Inspect the cylinder bore for wear or damage.
Measure the cylinder I.D. at three levels in X and Y axis.

SERVICE LIMIT: 47.05 mm (1.852 in)
PISTON REMOVAL

Place a shop towel in crankcase to keep dirt and parts out.

Remove the piston pin clip with needle nose pliers.

Press the piston pin out.

Remove the piston.

INSPECTION

Measure the piston ring-to-groove clearance.

SERVICE LIMIT: 0.12 mm (0.005 in)

Remove the piston rings.

NOTE:

Do not damage the piston rings during removal.

Inspect the piston for damage and cracks; ring grooves for wear.

Insert each piston ring into the cylinder, and measure the end gap.

SERVICE LIMIT: TOP/SECOND: 0.5 mm (0.02 in)
Measure the piston O.D. 10 mm (0.4 in) above the skirt's bottom.

SERVICE LIMIT: 46.90 mm (1.847 in)

Calculate the cylinder-to-piston clearance.

SERVICE LIMIT: 0.15 mm (0.006 in)

Measure the piston pin hole I.D.

SERVICE LIMIT: 13.06 mm (0.51 in)

Measure the piston pin O.D.

SERVICE LIMIT: 12.98 mm (0.511 in)

Calculate the piston-to-piston pin clearance.

SERVICE LIMIT: 0.075 mm (0.0030 in)

Measure the connecting rod small end I.D. with a small hole gauge.

SERVICE LIMIT: 13.1 mm (0.52 in)

See section 10 for connecting rod replacement procedure.
PISTON RING INSTALLATION
Install the piston rings with the markings facing up.

NOTE:
- After installation, the rings should rotate freely.
- Do not mix the top and second rings.

Space the piston ring end gaps 120 degrees apart. Do not align the gaps in the oil rings.
PISTON INSTALLATION

Apply molybdenum disulfide grease to inside of the connecting rod small end.
Install the piston, piston pin and clip.

NOTE:
- Install the piston with the "IN" mark facing the intake side.
- Do not align the piston pin clip end gap with the piston cutout.

CYLINDER INSTALLATION

Install the dowel pins, O-ring and gasket.

Apply a thin coat of engine oil to the piston rings and cylinder wall.
Install the cylinder, compressing the piston rings.

NOTE:
When the cylinder is halfway over the piston, route the cam chain through the cylinder.
Install the cam chain guide roller and tighten the guide roller pin.

**TORQUE: 9–14 N·m (0.9–1.4 kg·m, 6.5–10 ft-lb)**

Loosely install the cylinder mount bolt.

Install the cylinder head (Section 6).

Tighten the cylinder mount bolt.

**TORQUE: 10–14 N·m (1.0–1.4 kg·m, 7–10 ft-lb)**
38–45 N·m
(3.8–4.5 kg·m, 28–33 ft·lb)
8. CLUTCH/GEARSHIFT LINKAGE

SERVICE INFORMATION

GENERAL
- The clutch, gearshift spindle and stopper arm can be serviced with the engine in the frame.
- If the shift forks, drum and transmission require servicing, remove the engine and separate the crankcase.

TORQUE VALUE

Clutch lock nut
38–45 N-m (3.8–4.5 kg-m, 28–33 ft-lb)

Gearshift pedal bolt
9–15 N-m (0.9–1.5 kg-m, 6.5–11 ft-lb)

TOOLS

Lock nut wrench, 20 x 24 mm
07716–0020100 or 07916–3710000 or Equivalent commercially available in U.S.A.

Extension
07716–0020500—Equivalent commercially available in U.S.A.

Universal holder
07725–0030000—Equivalent commercially available in U.S.A.

TROUBLESHOOTING

Clutch slips
- No free play
- Discs worn
- Springs weak

Clutch does not disengage
- Plate warpage

Clutch drags when disengaged
- Lifter mechanism damaged

Hard shifting
- Improper clutch adjustment
- Shift forks bent
- Shift shaft bent
- Shift drum stopper bent
- Shift drum cam groove bent

Transmission jumps out of gear
- Gear dogs worn
- Shift shaft bent
- Shift drum stopper broken
- Shift forks bent

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
RIGHT CRANKCASE COVER REMOVAL

Remove the exhaust pipe (Page 12-11).
Remove the foot pegs (Page 12-12).
Remove the intake pipe joint bolts (Page 4-6).

Place a floor jack or other adjustable support under the engine and remove the engine upper hanger bolt.

Remove the right crankcase cover bolts.
Loosen the engine lower hanger bolt and lower the floor jack, then remove the right crankcase cover.

Remove the dowel pins and gasket.
Raise the engine and reinstall the engine upper hanger bolt.
CLUTCH LIFTER REMOVAL

Remove the rubber cover. Hold the clutch adjusting bolt and remove the lock nut, washer and O-ring.

CLUTCH REMOVAL

Remove the clutch lever and clutch cam.

Remove the clutch outer cover by removing the three screws.
Straighten the lock washer tab.

Remove the lock nut while holding the flywheel as shown.
Remove the washer and lock washer.
Remove the clutch assembly.

Remove the primary drive gear and clutch center guide.
CLUTCH DISASSEMBLY

Remove the snap ring and primary driven gear.

Remove the set ring using a screwdriver.
Remove the clutch plates, discs, center, drive gear outer and rollers.

Remove the clutch damper springs.
Place a wood block under the drive plate.
Remove the screws, loosening 2-3 turns at a time while pushing down on the clutch outer.
Remove the clutch springs under the screws.
INSPECTION

Measure the spring free length.

SERVICE LIMIT: 23.1 mm (0.91 in)

Replace the clutch discs if they show signs of scoring or discoloration.
Measure the disc thickness.

SERVICE LIMIT: DISC A: 2.3 mm (0.09 in)
DISC B: 3.0 mm (0.12 in)

Check the rollers and plates for excessive wear or damage.
Replace if necessary.
Check for plate warpage on a surface plate using a feeler gauge.

SERVICE LIMIT: 0.2 mm (0.01 in)

Check for wear or damage.
Measure the drive gear I.D.

SERVICE LIMIT: 21.05 mm (0.829 in)

Check for wear or damage.
Measure the clutch center guide O.D.

SERVICE LIMIT: 20.90 mm (0.823 in)

CLUTCH ASSEMBLY

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
Place the clutch springs on the drive plate and install the drive plate to the clutch outer.

NOTE:
- Tighten the screws in 2–3 steps in a crisscross pattern.

Install the clutch damper springs.

Install the rollers.
Install the drive gear outer and clutch center aligning the tabs and slots.
Install the discs and plates and secure with the setting.

Install the primary drive gear and washer.
Make sure the one way clutch assembly is installed correctly by turning the primary drive gear. The primary drive gear should turn counterclockwise freely and should not turn clockwise.
CLUTCH INSTALLATION

Install the primary driven gear and secure with the snap ring.

Install the clutch center guide onto the crankshaft.

Install the clutch assembly.

Install the lock washer and plain washer.

NOTE:
Install the plain washer with the OUTSIDE mark facing out.
Install and tighten the lock nut.

**TORQUE: 38–45 N-m (3.8–4.5 kg-m, 26–33 ft-lb)**

Bend the lock washer up into the lock nut.

Install the clutch outer cover.

Install the clutch cam and lever.
Install the spring and oil pass pipe.

**NOTE:**
When installing the clutch lever, make sure the clutch lever is aligned with the oil PASS PIPE (crankshaft).
RIGHT CRANKCASE COVER INSTALLATION

Install the clutch cam spring and ball race retainer. Install the dowel pins and gasket.

Install the clutch adjusting bolt and clutch lifter aligning the tang on the clutch lifter and groove on the right crankcase cover.

Install the O-ring washer and lock nut onto the adjusting bolt and tighten the lock nut.

Install the right crankcase cover in the reverse order of removal.

Fill the crankcase to the proper level with the recommended oil (Page 2-2). Adjust the clutch (Page 3-12). Install the foot peg (Page 12-12). Install the exhaust pipe (Page 12-11).
GEARSHIFT LINKAGE REMOVAL

Drain the engine oil (Page 2-2). Remove the gearshift pedal.

Remove the right crankcase cover (Page 8-2). Remove the drum stopper arm. Remove the drum stopper plate and washer.

Remove the gearshift spindle. Remove the pins from the gearshift drum.
Check the gearshift spindle and spring for wear or damage.

GEARSHIFT LINKAGE INSTALLATION

Install the gearshift spindle assembly.

Install the pins onto the gearshift drum and install the washer and drum stopper plate as shown.
Install the drum stopper arm as shown.
Tighten the pivot bolt.

Rotate the spindle and check the linkage for smooth cover (Page 8-9 through 8-11).

Install the clutch assembly and right crankcase cover.
Install the gearshift pedal and tighten the bolt.

TORQUE: 9—15 N·m (0.9—1.5 kg·m, 6.5—11 ft-lb)
9. RECOIL STARTER/ALTERNATOR/ CAM CHAIN TENSIONER

SERVICE INFORMATION

GENERAL
- This section covers removal and installation of the recoil starter and alternator.
- For alternator inspection and troubleshooting, refer to section 14.

SPECIFICATIONS

<table>
<thead>
<tr>
<th>ITEM</th>
<th>STANDARD</th>
<th>SERVICE LIMIT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cam chain tensioner</td>
<td>Spring free length</td>
<td>82.8 mm (3.26 in)</td>
</tr>
<tr>
<td></td>
<td>Push rod O.D.</td>
<td>11.985–12.000 mm (0.4718–0.4724 in)</td>
</tr>
</tbody>
</table>

TORQUE VALUE

- Starter driven pulley bolt: 8–12 N·m (0.8–1.2 kg·m, 6–9 ft·lb)
- Flywheel mount bolt: 33–38 N·m (3.3–3.8 kg·m, 24–27 ft·lb)
- Cam chain tensioner sealing bolt: 20–25 N·m (2.0–2.5 kg·m, 15–18 ft·lb)

TOOLS

Common
- Flywheel Puller: 07733–0010000 or 07933–0010000
- Flywheel Holder: 07725–0030000 or Equivalent commercially available in U.S.A.

TROUBLESHOOTING

- Engine does not turn when operating recoil starter
  - Faulty starter ratchet
  - Faulty starter driven pulley
  - Faulty starter drive pulley

- Starter rope does not recoil
  - Faulty recoil spring
RECOIL STARTER

REMOVAL
Shift the transmission into neutral.

Remove the mount screws and recoil starter.
Remove the gasket.

DISASSEMBLY
Remove the E-clip, washer and ratchet cover.

Remove the friction spring, set spring and ratchets.
Remove the starter handle cover.

CAUTION:

Wear eye protection and use care when removing the drive pulley and starter spring. The spring can pop out of the housing if care is not used.

Untie the starter rope and remove the starter handle.
Release the starter rope slowly.
Remove the starter drive pulley.

Remove the starter rope from the drive pulley.
Check the starter rope for wear or damage.

Check the recoil starter spring.
Replace the spring if it is broken.
Check the recoil starter housing for wear or a bent spring hook. Replace if necessary.

**ASSEMBLY**

Install the starter rope and tie the end in a square knot.

Wrap the rope around the starter pulley in a clockwise direction as viewed from the ratchet side.

Install the spring by hooking the end on the drive pulley hook.

**CAUTION:**

Wear eye protection and use care when installing the starter spring. The spring can pop out of the housing if care is not used.
Apply grease to the pulley shaft and install the drive pulley by hooking the end of the spring on the housing spring hook.

Preload the starter spring by turning the pulley 2 turns clockwise.

Route the rope end through the starter housing hole and install the handle.

Tie the rope end and install the handle cover.
Apply grease to the ratchet and install the ratchet onto the drive pulley.

Install the washer onto the pulley shaft.

Install the friction spring as shown.

Install the set spring.

Install the ratchet cover and hook the friction spring into the ratchet cover.
Install the washer and E-clip.

Check the recoil starter operation by pulling the starter handle.

INSTALLATION
Install the starter gasket and recoil starter with the three screws.
ALTERNATOR

LEFT CRANKCASE COVER REMOVAL
Remove the drive chain cover (Page 12-7).
Remove the recoil starter (Page 9-2).
Remove the neutral indicator by removing the E-clip.

Remove the two screws and remove the left crankcase cover.

STATOR REMOVAL
Remove the exhaust pipe (Page 5-2).
Remove the foot peg (Page 12-12).
Remove the starter driven pulley by removing the four attaching bolts.
Hold the flywheel and remove the flywheel nut.

Install the rotor puller and remove the flywheel from the crankshaft.

Disconnect the stator cable. Remove the wire clamp by removing the screw. Remove the stator attaching screws and the stator.
STATOR INSTALLATION
Install the stator in the reverse order of removal.

Tighten the flywheel nut.

TORQUE: 33–38 N·m (3.3–3.8 kg·m, 24–27 ft·lb)

Route the stator cable correctly (Page 1-7).

LEFT CRANKCASE INSTALLATION
Install the left crankcase in the reverse order of removal.

CAM CHAIN TENSIONER

REMOVAL
Remove the recoil starter and left crankcase cover.

Drain the engine oil (Page 2-2).

Remove the stator base screws and remove the stator base.

Remove the cam chain tensioner sealing bolt, spring and push rod.
Remove the cam chain tensioner.

Check the cam chain tensioner sprocket for wear or damage.

INSPECTION

Measure the spring free length.

SERVICE LIMIT: 77 mm (3.0 in)

Check the push rod for wear or damage, and measure the push rod O.D.

SERVICE LIMIT: 11.94 mm (0.470 in)

Replace either part if its measurement does not fall within service limit.

INSTALLATION

Install the cam chain tensioner.

Install the push rod, spring, washer and sealing bolt.

NOTE:

Check operation of the push rod valve before installation.

Tighten the sealing bolt.

TORQUE: 20–25 N·m (2.0–2.5 kg-m, 15–18 ft-lb)
Install the O-rings on the stator base and stator base screw holes.
Install the stator base and tighten the screws.

Install the left crankcase cover and recoil starter (Pages 9-6 and 9-9).

Pour clean engine oil through the oil bolt hole until oil flows out of the hole.

Install the oil bolt.

NOTE:

- Use the proper length bolt.
- A longer bolt may interfere with the push rod.

Fill the engine with the recommended oil (Page 2-1).
10-14 N·m
(1.0-1.4 kg-m, 7-10 ft-lb)
SERVICE INFORMATION

GENERAL
- The crankcase must be separated to service the crankshaft and transmission components.
- The following parts must be removed before separating the crankcase:
  - Cylinder head
  - Cylinder and piston
  - Clutch
  - Gearshift linkage
  - Alternator
  - Recoil starter

Attachment 17 mm I.D. 07746-0020300
Attachment 20 mm I.D. 07746-0020100
Driver I.D. 07746-0020400

TROUBLESHOOTING

Hard to shift
- Improper clutch adjustment
- Shift fork bent
- Shift shaft bent
- Shift drum stopper arm bent

Transmission jumps out of gear
- Gear dogs worn
- Shift shaft bent
- Shift drum stopper broken
- Shift forks bent

Excessive noise
- Excessive crankshaft bearing play
- Excessive connecting rod big end bearing play
CRANKCASE SEPARATION

Remove the following:
- The engine (Section 5).
- The cylinder head (Section 6).
- The cylinder and piston (Section 7).
- The clutch (Section 8).
- The gearshift linkage (Section 8).
- The recoil starter (Section 9).
- The left crankcase cover (Section 9).
- The flywheel (Section 9).
- the drive sprocket by removing the two bolts.

Remove the two stator base attaching screws and pull out the stator base.

Remove the cam chain, cam chain tensioner sealing bolt, spring, push rod, and cam chain tensioner (Page 99).
Remove the neutral indicator shaft.
Remove the eight crankcase bolts.

Place the engine with the right side facing up.
Separate the right crankcase from the left crankcase.
Remove the dowel pins and gasket.
CRANKSHAFT REMOVAL

Remove the crankshaft.

INSPECTION
Set the crankshaft on a stand or V-blocks and read the runout using a dial indicator.

SERVICE LIMITS:
RIGHT: 0.10 mm (0.004 in)
LEFT: 0.10 mm (0.004 in)

Measure the side clearance at the connecting rod big end with a feeler gauge.

SERVICE LIMIT: 0.6 mm (0.02 in)
Measure the radial clearance at the connecting rod big end, at two points in the direction indicated by the arrows.

**SERVICE LIMIT:** 0.05 mm (0.002 in)

Spin the crankcase bearing by hand and check for play.

The bearing must be replaced if it is noisy or has excessive play.

**TIMING SPROCKET INSPECTION**
Inspect the timing sprocket teeth for wear or damage. Replace if necessary.
Install the sprocket so that the valley between any two teeth is aligned with the center line of the keyway.

TRANSMISSION DISASSEMBLY

Remove the transmission and gearshift drum as an assembly.

Remove the guide pin clips, shift forks and guide pins.

NOTE:
Mark the shift forks so that they can be placed back in their original positions.
Check the shift forks for wear, bending or damage.

Measure the I.D. of the shift forks.
SERVICE LIMIT: 34.07 mm (1.341 in)

Measure the shift fork end thickness.
SERVICE LIMIT: 4.6 mm (0.18 in)

Inspect the guide pins for wear or damage.

Measure the gearshift drum O.D.
SERVICE LIMIT: 33.93 mm (1.336 in)

Remove the transmission gears.

Measure each gear’s I.D.
SERVICE LIMITS:
C1: 17.07 mm (0.672 in)
M2, M4, C3: 17.10 mm (0.673 in)
Measure the countershaft and mainshaft O.D.

**SERVICE LIMIT:**
- Mainshaft: 16.95 mm (0.667 in)
- Countershaft: 16.95 mm (0.667 in)

Check the bearings for excessive play or damage.

**BEARING REPLACEMENT**
Remove the bearings from the right and left crankcases.

Drive new bearings into the right and left crankcase.
TRANSMISSION ASSEMBLY

Coat all parts with clean engine oil.

Assemble the transmission shafts and gears noting the locations of the thrust washers and snap rings.

NOTE:
Make sure the snap rings are seated properly.

Install the shift forks in the original positions from which they were removed.

NOTE:
Bend the tab of the rotor into the drum.
OIL PUMP DRIVE SPROCKET INSPECTION
Inspect the oil pump drive sprocket for wear or damage.
Replace if necessary.

CRANKCASE ASSEMBLY
Apply clean engine oil to the crankshaft before assembly.
Install the crankshaft.

Assemble the gearshift drum, countershaft and mainshaft.

Install the gearshift drum, countershaft and mainshaft assemblies together in the left crankcase.

Rotate the mainshaft by hand to make sure the gears rotate freely.

Install the dowel pins and new gasket.
Assemble the right and left crankcase halves.

NOTE:
Make sure that the gasket stays in place during this operation.

Tighten the crankcase mount bolts.
Install and tighten the neutral indicator shaft.

Install the removed parts in the reverse order of removal (Page 10-3).

TORQUE:

TORQUE VALUES

- Handlebar upper holder bolt: 19–25 N·m (1.9–2.5 kg·m, 14–18 ft·lb)
- Handlebar lower holder nut: 40–48 N·m (4.0–4.8 kg·m, 29–35 ft·lb)
- Fork bridge bolt: 40–48 N·m (4.0–4.8 kg·m, 29–35 ft·lb)
- Steering stem nut: 50–70 N·m (5.0–7.0 kg·m, 36–51 ft·lb)
- Front axle nut: 60–80 N·m (6.0–8.0 kg·m, 43–58 ft·lb)
- Front wheel hub nut: 19–25 N·m (1.9–2.5 kg·m, 14–18 ft·lb)
- Bearing adjustment nut: 25–35 N·m (2.5–3.5 kg·m, 18–25 ft·lb)
  First: 6–7 N·m (0.6–0.7 kg·m, 4.3–5.1 ft·lb)
  Final: 6–7 N·m (0.6–0.7 kg·m, 4.3–5.1 ft·lb)

TOOLS

- Special:
  - Ball race remover: 07944–1150001 or MG360–277–91774 (U.S.A. only)
  - Steering stem driver: 07946–GC40000
  - Universal bend breaker: GN-AH-958-BB1 (U.S.A. only)

- Common:
  - Driver: 07746–0010000
  - Attachment, 32 x 35 mm: 07746–0010100
  - Pilot, 15 mm: 07746–0040300
  - Attachment, 37 x 40 mm: 07746–0010200
  - Lock nut wrench, 26 x 30 mm: 07716–0020203 or equivalent commercially available in U.S.A.
  - Lock nut wrench, 30 x 32 mm: 07716–0020400 or equivalent commercially available in U.S.A.
  - Extension: 07716–0020500 or equivalent commercially available in U.S.A.
  - Bearing remover head: 07746–0050400
  - Bearing remover shaft: 07746–0050100
TROUBLESHOOTING

Hard steering
- Steering stem nut too tight
- Faulty steering stem bearings
- Damaged steering stem ball race or cone race
- Insufficient tire pressure

Steers to one side or does not track straight
- Bent front forks
- Bent front axle, wheel installed incorrectly

Front wheel wobbling
- Bent rim
- Worn front wheel bearing
- Faulty tire
- Axle nut tightened properly
HANDLEBAR

REMOVAL
Loosen the brake adjuster nut.
Pull the brake cable and disconnect from the brake lever.

Remove the two throttle case screws and remove the throttle case from the handlebar.

Remove the handlebar upper holder cover cap and remove the two screws, then remove the handlebar upper holder cover.

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.

11-3
Remove the handlebar upper holder bolts and remove the handlebar upper holder.

Remove the handlebar.

INSTALLATION
Place the handlebar on the lower holder.
Align the punch mark on the handlebar with the top of the handlebar lower holder.
Install the upper holders with the L or R mark facing forward.
Install the throttle case.
Install the brake cable.

THROTTLE LEVER

DISASSEMBLY
Remove the throttle case from the handlebar (Page 11-3).
Disconnect the throttle cable from the throttle arm.
Bend down the lock washer tab and remove the bolt and lock washer. Remove the throttle lever, arm and spring from the throttle housing.

ASSEMBLY

Install the throttle arm, spring and lever into the throttle housing.

Install the throttle lever using the bolt and new lock washer. Bend up the lock washer tab against the bolt head.

Check the lever for smooth operation.

Apply grease to the throttle cable end and connect the cable to the throttle arm. Insert the rubber seal into the groove of the throttle case.

Install the throttle case aligning the slot with the lug. Tighten the throttle case screws. Check the throttle lever for smooth operation.
FRONT WHEEL

REMOVAL
Raise the front wheel off the ground using a floor jack or other adjustable support under the engine.
Remove the cotter pin and front axle nut.
Remove the front axle and collar from both sides of the front wheel.
Remove the front wheel.

INSPECTION
Measure the front wheel rim runout.
SERVICE LIMIT: 4.0 mm (0.16 in)

Set the axle in V-blocks, rotate and measure the runout with a dial indicator.
Actual runout is 1/2 of the total indicator reading.
SERVICE LIMIT: 0.5 mm (0.02 in)
Check the wheel bearing by placing the wheel between V-blocks and spinning the wheel by hand.

Replace the bearings with new ones if they are noisy or have excessive play.

WHEEL BEARING REPLACEMENT

Install the bearing remover head into the bearing. From the opposite side install the bearing remover shaft and drive the bearing out of the wheel. Remove the distance collar and drive out other bearing.

NOTE:

If the bearings are removed, they must be replaced with new ones.

Pack grease into the bearing cavities.

Drive in the left bearing squarely until it seats. Install the center collar and drive in the right bearing squarely until it seats.

NOTE:

Do not allow the bearings to tilt while driving them in.
TIRE REMOVAL

NOTE:

This service requires the Universal Bead Breaker (GN-AH-958-BB1) available in U.S.A. only.

Remove the core from the valve stem.

CAUTION:

- Use of the Bead Breaker tool is required for tire removal.
- Do not damage the bead seating area of the rim.

Install the blade for 7"/8" rims onto the breaker arm assembly.

CAUTION:

Use of an improper size blade may result in damage to the rim, tire or blade.

Place the proper size adapter onto the threaded shaft and then put the wheel over the threaded shaft and adapter.

Install the white positioning buttons in the press head assembly.

Lube the bead area with rubber lubricant, pressing down on the tire sidewall/bead area in several places, to allow the lubricant to run into and around the bead. Also lube the area where the breaker arm will contact the sidewall of the tire.

While holding the breaker arm assembly at an approximate 45° position, insert the blade of the breaker arm between the tire and rim.

Push the breaker arm inward and downward until it is in the horizontal position with its press block in contact with the rim.
With the breaker arm in the horizontal position, place the breaker press head assembly over the breaker arm press block. Make sure the press head bolt is backed out all the way and then position the nylon buttons on the press head against the inside edge of the rim.

Insert the threaded shaft through the appropriate hole in the breaker press head assembly and then tighten the lever nut until both ends of the breaker press head assembly are in firm contact with the rim.

**NOTE:**
- Insert bolts through the holes in the rim hub mounting tabs and the adapter to position the adapter properly.

Tighten the press head bolt until the reference mark on the press block is aligned with the top edge of the press head.

If the rest of the bead cannot be pushed down into the center of the rim by hand, loosen the press head bolt and the lever nut. Rotate the breaker arm assembly and breaker press head assembly 1/8 to 1/4 the circumference of the rim. Tighten the lever nut and then tighten the press head bolt as described. Repeat this procedure as necessary until the remainder of the bead can be pushed down into the center of the rim.

Assemble the Universal Bead Breaker on the other side of the wheel and break the bead following the same procedures.

Remove the three rim bolts and separate the rim halves from the tire.

**TIRE REPAIR (WITH COLD PATCH)**
Check the tire tread for puncturing objects.
Chalk mark the punctured area and remove the puncturing objects.

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
Clean and roughen the punctured area inside the tire with a tire rubber cleaner or a wire brush. Clean the area with non-flammable solvent.

Apply rubber cement around the torn area and allow it to dry. Remove the lining from the patch and center it over the injury. Press the patch against the injury using a special roller.

**NOTE:**
- Allow cement to dry until tacky before applying patch.
- Do not touch cement surface with dirty or greasy hands.

**TIRE REPAIR (WITH RUBBER PLUG)**

**NOTE:**
- This method is an emergency repair only.
- Replace the plug at the first opportunity with a cold patch.

Remove the puncturing object.
Insert a rubber plug through the eye of an inserting needle.

Apply patching cement to the plug.
Center the needle on the plug and insert until the plug is all the way in the tire. Twist the needle several times.

Pull the needle straight out so that the plug is about 10 mm (3/8 in) above the tread surface. Trim the plug 2 mm (1/16 in) above the surface.

Repeat the above procedure if the puncture is large.

TIRE ASSEMBLY

Clean the rim bead seat, flange and O-rings grooves.
Inspect the O-ring for damage, discard, broken or nicked.
Assemble the rim halves into the tire making sure the O-ring is seated in it's groove.
Install and tighten the three rim bolts.
TORQUE: 19–25 N-m (1.9–2.5 kg-m, 14–18 ft-lb)

Install the valve core and inflate the tire to seat the bead.

TIRE PRESSURE:
2.2 psi (0.15 kg/cm², 15 kPa)
Min. Pressure: 1.7 psi (0.12 kg/cm², 12 kPa)
Max. Pressure: 2.5 psi (0.18 kg/cm², 18 kPa)

Measure the tire circumference.
STANDARD TIRE CIRCUMFERENCE:
1,290 mm (50.7 in)

Check for air leaks and install the valve cap.

Install the front wheel hub and tighten the hub nuts.
TORQUE: 19–25 N-m (1.9–2.5 kg-m, 14–18 ft-lb)

Install the dust seal over the wheel bearings.

INSTALLATION

Install the front wheel in the reverse order of removal.
Tighten the front axle nut.
TORQUE: 60–80 N-m (6.0–8.0 kg-m, 43–58 ft-lb)
STEERING STEM

Remove the handlebar (Page 11-3).
Remove the front wheel (Page 11-6).
Remove the front fender by removing the four bolts.

Remove the fork bridge bolts.

Remove the steering stem nut and the fork bridge.
Remove the steering adjustment nut.

Remove the top cone race, ball bearings and front fork bearing careful not to drop the upper bearings.

BALL/CONNE RACE REPLACEMENT
Check the ball races for wear or damage and remove if necessary.
Drive new top and bottom ball races into head pipe with the special tools.

Inspect the bottom cone race for wear or damage and replace if necessary. Remove the bottom cone race with a hammer and a drift.

Install a new washer and dust seal and drive a new cone race into place.
INSTALLATION
Apply grease to the top and bottom ball races and install 21 ball bearings for both the top and bottom ball races.
Insert the steering stem into the steering head pipe and install the top cone race.

Install the bearing adjustment nut and tighten it with first torque.
TORQUE: 25–35 N-m (2.5–3.5 kg-m, 18–25 ft-lb)

Turn the steering stem lock-to-lock 4–5 times to seat the bearings.
Completely loosen the bearing adjustment nut, then retighten the adjustment nut to final torque.
TORQUE: 6–7 N-m (0.6–0.7 kg-m, 4.3–5.1 ft-lb)

Make sure that there is no vertical movement and that the stem rotates freely.
Install the handlebar lower holders onto the fork bridge and tighten the nuts.
**TORQUE: 40–48 N·m (4.0–4.8 kg-m, 29–35 ft-lb)**

Install the fork bridge onto the front fork and install the steering stem nut.
Tighten the steering stem nut.
**TORQUE: 50–70 N·m (5.0–7.0 kg-m, 36–51 ft-lb)**

Install and tighten the fork bridge bolts.
**TORQUE: 40–48 N·m (4.0–4.8 kg-m, 29–35 ft-lb)**

Install the removed parts in the reverse order of removal.
SERVICE INFORMATION

GENERAL
- This section covers maintenance of the rear wheel and drive mechanism.
- A jack or block is required to support the ATC.
- Refer to section 11 for tire servicing.

Foot peg guard A: 8 mm
Foot peg guard B: 10 mm
Foot peg: 19–25 N·m (1.9–2.5 kg·m, 14–18 ft·lb)

TOOLS

Common
Attachment, 52 x 55 mm: 07746-0010400
Driver: 07749-0010000
Pilot, 30 mm: 07746-0040700
TROUBLESHOOTING

Wobble or vibration in ATC
- Bent rim
- Loose wheel bearing
- Faulty rear axle bearing holder
- Faulty tire
- Axle not tightened properly

Poor brake performance
- Improper brake adjustment
- Worn brake shoes
- Brake linings oily, greasy or dirty
- Worn brake cam
- Worn brake drum
- Brake arm serrations improperly engaged
- Brake shoes worn at cam contact area
REAR WHEEL

REMOVAL
Raise the rear wheel off the ground using a floor jack or other adjustable support under the axle.

Remove the three hub bolts and rear wheel.

REAR TIRE DISASSEMBLY/ASSEMBLY
For tire disassembly, assembly and repair, refer to pages 11-8 through 11-11.

INSTALLATION
Install the rear wheel with the tire valve facing out.

Tighten the hub bolts.

TORQUE: 19–25 N·m (1.9–2.5 kg-m, 14–18 ft-lb)

REAR BRAKE

REMOVAL

NOTE:
The brake lining can be inspected and replaced with the rear wheel installed.

Stand the ATC on its rear wheels and rear carrier.

CAUTION:
To prevent fuel spillage; if the fuel tank is more than half full, either drain some fuel or remove the fuel tank (Page 4-3).

Remove the skid plate by removing the four bolts.
Raise the right rear wheel using a floor jack or other adjustable support under the right axle.

Remove the cotter pin, axle nut and washer.
Remove the rear wheel with the wheel hub.
Remove the brake drum cover by removing the three bolts.

Remove the brake drum from the axle shaft.

INSPECTION
Measure the brake lining thickness.
SERVICE LIMIT: 2.0 mm (0.079 in)
Replace the brake lining if it is thinner than the service limit.

NOTE:
- Contaminated brake linings reduce stopping power.
- Keep oil or grease off the linings.
Inspect the brake drum for wear or damage. Replace if necessary.

Measure the brake drum I.D.
SERVICE LIMIT: 131 mm (5.2 in)
Replace if necessary.

BRAKE DISASSEMBLY
Remove the cotter pin and washer. Expand and remove the brake shoes.

Remove the brake arm nut, bolt, brake arm, wear indicator plate, felt seal and spring.
Remove the brake cam.

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
Remove the bolts and anchor pin.

Remove the felt seal, brake cam holder bolts and cam holder.

**ASSEMBLY/INSTALLATION**

**NOTE:**

Apply engine oil to the felt seal before installing.

Install the brake cam holder, anchor pin and felt seal.
Apply grease to the brake cam and install it.
Install the spring and felt seal.
Install the wear indicator plate aligning the tab on the plate with the slit on the brake cam.

Install the brake arm over the brake arm aligning the punch mark on the brake arm with the slit on the brake cam.

Tighten the brake arm bolt.
Install the brake shoes and secure with washer and cotter pin.

Install the brake drum, drum cover.

**WARNING**
Brake dust contains asbestos which can be harmful to your health. Do not use compressed air to clean brake parts. Use a vacuum with a sealed dust collector. Wear a protective face mask and wash your hands when finished.

Install the rear wheel.
Install the washer over the axle shaft with the outside mark facing out.

Install the axle nut and tighten it.
**TORQUE: 60–80 N·m (6.0–8.0 kg·m, 32–58 ft·lb)**

Install the cotter pin into the axle shaft and bend the end of the cotter pin.

Install the skid plate.

**DRIVE CHAIN**

**REMOVAL**
Remove the skid plate (Page 12-3).
Remove the drive chain cover by removing the four bolts.

Remove the recoil starter (Page 9-2).
Remove the left crankcase cover (Page 9-7).
Loosen the drive chain tensioner bolts (Page 3-10). Remove the drive chain clip and remove the drive chain.

INSTALLATION
Install the drive chain clip in the direction as shown.
Install the removed parts in the reverse order of removal.
Adjust the drive chain tension (Page 3-10).

FINAL DRIVE SPROCKET

REMOVAL
Remove the skid plate (Page 12-3).
Remove the left rear wheel with the wheel hub by removing the cotter pin, axle nut and washer.

Remove the drive chain cover (Page 12-7).
Remove the drive chain clip and remove the drive chain from the driven sprocket.

NOTE:
It is not necessary to remove the drive chain from the drive sprocket. If the drive chain comes off the drive sprocket, remove the recoil starter and left crankcase cover.

Pull the final driven sprocket housing out of the axle shaft.
INSPECTION
Inspect the driven sprocket for wear, or damage.
Replace if necessary.

Separate the driven sprocket from the housing and inspect the damper rubbers for damage or deterioration.
Replace if necessary.

INSTALLATION
Install the driven sprocket in the reverse order of removal.
After installing check the drive chain tension and adjust it.

REAR AXLE
REMOVAL
NOTE:
- The axle can be removed from either side.

Remove the following parts:
- rear wheels (Page 12-3).
- final driven sprocket.
- brake drum and shoes.

Raise the rear wheels off the ground.
Remove the rear axle.
INSPECTION
Check the axle bearings by spinning them by hand. Replace the bearings with new ones if they are noisy or have excessive play.

BEARING REPLACEMENT
Remove the dust seal and drive out the bearings.

Pack all bearing cavities with grease. Drive in the new bearings.

NOTE:
Do not allow the bearings to tilt while driving them in.
Install the dust seal over the bearing. Install the axle and the removed parts in the reverse order of removal.

**EXHAUST PIPE**

**REMOVAL**

Remove the exhaust pipe joint nuts.

Remove the exhaust pipe mount bolts.
FOOT PEG

REMOVAL/INSTALLATION
Remove the exhaust pipe (Page 12-11).

Stand the ATC on its rear wheels and rear carrier.

CAUTION:
To prevent fuel spillage; if the fuel tank is more than half full, either drain the fuel or remove the fuel tank (Page 4-3).

Remove the foot peg mount bolts and foot peg.
13. ELECTRICAL

SERVICE INFORMATION

GENERAL
- For ignition timing, refer to page 3-4.
- For spark plug inspection, refer to page 3-6.
- For contact point inspection, refer to page 3-4.

SPECIFICATIONS

TROUBLESHOOTING

Engine cranks but will not start
- Engine stop switch OFF
- No spark at plug

No spark at plug
- Engine stop switch OFF
- Points not opening
- Points burned, wet fouled or dirty
- Poorly connected, broken or shorted wire
  - Between ignition coil and contact point
  - Between ignition coil and ground
- Plug fouled
- Faulty plug wire
- Coil weak or inoperative
- Faulty condenser
- Faulty ignition coil
- Faulty alternator

Engine starts but runs poorly
- Ignition primary circuit
  - Points dirty or fouled
  - Incorrect point gap
  - Faulty ignition coil
  - Faulty condenser
  - Loose or bare wire
  - Intermittent short circuit
- Ignition secondary circuit
  - Faulty plug
  - Faulty high tension wire
- Improper ignition timing
IGNITION COIL

INSPECTION
Disconnect the ignition coil primary wire and check the resistance between the ignition coil primary terminal and ground.

**RESISTANCE:** 1.35–1.65 Ω

Disconnect the plug cap.

Check the resistance between the primary terminal and plug cap.

**RESISTANCE:** 7.65–9.35 Ω

REMOVAL
Disconnect the coil wires and remove the two screw and the ignition coil.

INSTALLATION
Install the ignition coil and connect the wires.
CONTACT POINTS

REMOVAL
Remove the recoil starter and flywheel (Page 9-2).
Disconnect the point wire.
Remove the contact point assembly.

For contact points inspection, see page 3-4.

NOTE:
If the oil felt is dry, apply one or two drops of clean engine oil to it.

CONDENSER CAPACITY TEST
Remove the condenser from the base plate.
Discharge the condenser by grounding its terminal against its casing.

Measure the condenser capacity with a tester.
CAPACITY: 0.22–0.26 µF

If it is out of specification, replace the condenser.

POINT REPLACEMENT
Remove the point setting screw and disconnect the wire.
Replace the contact point.

NOTE:
Do not forget to install the bakelite washers to insulate the condenser/alternator terminal from ground.

Install the contact point assembly in the reverse order of removal.

Adjust the point gap (Page 3-4).
ALTERNATOR

Inspect the alternator resistance between black wire and ground align the “F” mark and index mark, then turn the flywheel counterclockwise.

NOTE:
When the “F” mark is not aligned with the index mark, there should continuity between the black wire and ground.

RESISTANCE: 2.43–2.97 Ω

ENGINE STOP SWITCH

Check for continuity of the engine stop switch wires in each switch position.

RUN: Black to Green
OFF: No continuity

TROUBLESHOOTING

ENGINE WILL NOT START OR IS HARD TO START

1. Check if fuel reaches carburetor
   FUEL REACHES CARBURETOR
   → FUEL DOES NOT REACH CARBURETOR

2. Remove spark plug and test spark
   GOOD SPARK
   → WEAK OR NO SPARK

3. Test cylinder compression
   NORMAL COMPRESSION
   → LOW COMPRESSION

4. Start engine
   ENGINE STARTS
   → ENGINE FIRES, BUT DOES NOT START

5. Remove spark plug
   DRY PLUG
   → WET PLUG

6. Start engine with choke closed

POSSIBLE CAUSE

FUEL DOES NOT REACH CARBURETOR

(1) Empty fuel tank
(2) Clogged fuel line between fuel tank and carburetor
(3) Clogged fuel valve
(4) Clogged fuel tank cap breather hole

WEAK OR NO SPARK

(1) Faulty or fouled spark plug
(2) Fouled, burnt or pitted contact points
(3) Incorrect point gap
(4) Faulty condenser
(5) Broken or shorted spark plug wire
(6) Open or shorted ignition coil
(7) Faulty alternator

LOW COMPRESSION

(1) No valve clearance
(2) Valve stuck open
(3) Worn cylinder and piston rings
(4) Blown cylinder head gasket
(5) Damaged cylinder head
(6) Incorrect valve timing

ENGINE FIRES, BUT DOES NOT START

(1) Choke valve open
(2) Carburetor pilot screw improperly adjusted
(3) Air leaking through intake manifold

WET PLUG

(1) Carburetor flooded
(2) Carburetor choke excessively closed
(3) Throttle valve operated excessively
(4) Air cleaner dirty

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
ENGINE LACKS POWER

1. Raise wheels off ground and spin
   WHEELS SPIN FREELY

   WHEELS DO NOT SPIN FREELY → POSSIBLE CAUSE
   (1) Dragging brake
   (2) Faulty wheel bearing
   (3) Over tightened drive chain

2. Check tire pressure
   NORMAL PRESSURE

   INCORRECT TIRE PRESSURE → (1) Punctured tire
   (2) Faulty tire valve

3. Rapidly accelerate from low to second
   ACCELERATES

   DOES NOT ACCELERATE WITH ENGINE SPEED INCREASE → (1) Slipping clutch
   (2) Worn or uneven clutch facings

4. Rev up gradually
   ENGINE SPEED INCREASES

   ENGINE SPEED DOES NOT INCREASE → (1) Carburetor choke closed
   (2) Clogged air cleaner
   (3) Clogged fuel line
   (4) Clogged fuel tank cap breather hole
   (5) Clogged muffler

5. Check ignition timing
   CORRECT TIMING

   INCORRECT TIMING → Incorrect ignition timing

6. Check valve clearance
   CORRECT VALVE CLEARANCE

   INCORRECT VALVE CLEARANCE → (1) Incorrect valve clearance
   (2) Worn valve seat

7. Test cylinder compression
   NORMAL COMPRESSION

   LOSS OF COMPRESSION → (1) Valve stuck open
   (2) Worn cylinder and piston rings
   (3) Blown cylinder head gasket
   (4) Incorrect valve timing

8. Check carburetor for clogging
   CARBURETOR NOT CLOGGED

   CARBURETOR CLOGGED → Carburetor jets clogged

9. Remove spark plug
   PLUG NOT FOULED OR DISCOLORED

   PLUG FOULED OR DISCOLORED → (1) Fouled plug
   (2) Incorrect heat range plug
TROUBLESHOOTING

10. Check oil level and condition
   CORRECT ENGINE OIL LEVEL

11. Remove cylinder head cover and check lubrication
   INSUFFICIENTLY LUBRICATED
   (1) Clogged oil passage
   (2) Poor oil pump delivery
   (3) Low oil pressure
   SUFFICIENTLY LUBRICATED

12. Check if engine overheats
   ENGINE DOES NOT OVERHEAT

13. Rapidly accelerate or run at high speeds
   ENGINE KNOCKS
   (1) Worn piston or cylinder
   (2) Fuel mixture too lean
   (3) Incorrect fuel
   (4) Excessive carbon in combustion chamber

ENGINE DOES NOT KNOCK

POOR PERFORMANCE AT IDLE AND LOW SPEED

1. Check ignition timing and valve clearance
   CORRECT TIMING AND CLEARANCE
   INCORRECT TIMING AND CLEARANCE
   (1) Incorrect ignition timing
   (2) Incorrect valve clearance

2. Check carburetor pilot screw adjustment
   CORRECTLY ADJUSTED
   INCORRECTLY ADJUSTED
   (1) Fuel mixture too lean
   (2) Fuel mixture too rich

3. Check for air leaks
   NO AIR LEAKS
   AIR LEAKS
   (1) Faulty carburetor gasket
   (2) Carburetor not securely tightened
   (3) Faulty intake pipe gasket
   (4) Deteriorated O-ring

4. Remove spark plug and test spark
   GOOD SPARK
   WEAK OR INTERMITTENT SPARK
   (1) Faulty or fouled spark plug
   (2) Fouled, rough, or pitted breaker point surface
   (3) Condenser shorted
   (4) Faulty ignition coil

Date of Issue: June, 1984
© HONDA MOTOR CO., LTD.
POOR HIGH SPEED PERFORMANCE

1. Check ignition timing and valve clearance
   INCORRECT TIMING & CLEARANCE
   POSSIBLE CAUSE
   Incorrect valve clearance

   CORRECT TIMING & CLEARANCE

2. Disconnect fuel tube at carburetor and check for clogging
   RESTRICTED FUEL FLOW
   (1) Empty fuel tank
   (2) Clogged fuel tube
   (3) Clogged fuel tank cap breather hole

   UNRESTRICTED FUEL FLOW

3. Check fuel filter, fuel valve, and carburetor jet for clogging
   CLOGGED
   (1) Clogged jet
   (2) Clogged fuel filter
   (3) Clogged fuel valve

   NOT CLOGGED

4. Replace carburetor main jet with smaller size
   CONDITION AGGRAVATED
   (1) Jet size too small
   (2) If condition improve with small jet:
      a) Clogged air cleaner
      b) Choke not opened fully

   CONDITION IMPROVED

5. Check valve timing
   INCORRECT
   Cam sprocket not installed properly

   CORRECT

6. Check valve spring tension
   INCORRECT SPRING TENSION
   Worn or broken valve spring

   SPRING TENSION CORRECT

SMOKING EXHAUST

1. Run ATC a long distance at high speed
   BLACK SMOKE EMITTED
   POSSIBLE CAUSE
   (1) Worn cylinder and piston rings
   (2) Oil level too high
   (3) Piston rings incorrectly installed
   (4) Faulty piston or cylinder
   (5) Damage cylinder head

   THIN EXHAUST EMITTED

2. Return throttle lever quickly
   WHITE SMOKE EMITTED
   (1) Worn intake valve guide or stem
   (2) Deteriorated valve guide O-ring

   NO WHITE SMOKE EMITTED

3. Run ATC a long distance at low speed
   WHITE SMOKE EMITTED
   (1) Worn exhaust valve guide and stem
   (2) Exhaust valve guide incorrectly seated
   (3) Worn exhaust valve stem seal

   UNCOLORED EXHAUST
**TROUBLESHOOTING**

**FAULTY CLUTCH**

1. Properly adjusted clutch

CLUTCH SLIPPING

POSSIBLE CAUSE

1. Weak clutch spring
2. Worn or distorted clutch plate or friction disc

**DIFFICULT SHIFTING**

DIFFICULT SHIFTING

POSSIBLE CAUSE

1. Broken gear shift arm spring
2. Broken shift fork
3. Sluggish movement of shift drum or forks
4. Broken shifting gear protrusion
5. Shift arm pawel disconnected from shift drum

PEDAL DOES NOT RETURN TO NEUTRAL

POSSIBLE CAUSE

1. Broken shift return spring
2. Shift shaft interfering with case or cover

GEARS JUMPING OUT OF PISTON

POSSIBLE CAUSE

1. Worn shifting gear or bent shift fork stopper spring
2. Broken or weakened shift drum stopper spring

**ENGINE NOISE**

VALVE NOISE

POSSIBLE CAUSE

1. Excessive valve clearance
2. Worn valve

PISTON SLAP

POSSIBLE CAUSE

1. Worn piston and cylinder
2. Excessive carbon in combustion chamber
3. Worn piston pin and connecting rod small end

CAM CHAIN NOISE

POSSIBLE CAUSE

1. Worn camshaft sprocket teeth
2. Stretched cam chain

CLUTCH CHATTER

POSSIBLE CAUSE

1. Excessive clearance between clutch plate and clutch outer
2. Weakened clutch damper spring

NOISY DRIVE & DRIVEN GEARS

POSSIBLE CAUSE

1. Worn or deteriorated driven gear damper
2. Worn gear teeth
POOR HANDLING

DIFFICULT STEERING IN BOTH DIRECTIONS

POSSIBLE CAUSE
1. Overtightened steering head top thread nut
2. Broken steering ball bearings
3. Bent steering stem

WHEEL WOBBLING

POSSIBLE CAUSE
1. Excessive play in wheel bearing
2. Bent wheel rim
3. Frame bent
4. Drive chain adjusters unequally adjusted

ATC PULLS TO ONE SIDE

POSSIBLE CAUSE
1. Bent rear axle
2. Bent front fork

FAULTY BRAKE

ADJUSTER INEFFECTIVE

POSSIBLE CAUSE
Worn brake lining, brake shoe or brake cam

SQUEAKING

POSSIBLE CAUSE
1. Worn brake lining
2. Foreign particles on brake lining
3. Rough brake drum shoe containing face
4. Worn brake panel bushing

BRAKE INEFFECTIVE

POSSIBLE CAUSE
1. Faulty brake cable
2. Brake shoe partially contacted
3. Mud or water in brake
4. Oil or grease on brake lining
5. Worn brake lining
1985 ATC70 DIFFICULT SHIFTING

Over a period of time, shifting gears on some of the affected units listed below may require increased effort.

Replacing the shift drum stopper arm and stopper plate with the parts listed in this bulletin will improve shifting performance.

2. For future identification, make a center punch mark on the crankcase directly to the right of the engine number.

![Diagram of Shift Drum Stopper Plate and Arm]

AFFECTED UNITS

1985 ATC70 – Eng. #3000001 to 3047951

PROCEDURE

1. Replace the Shift Drum Stopper Arm and Stopper Plate with the parts listed in this bulletin according to the procedures in the Shop Manual.

   NOTE: Apply Honda Anaerobic Thread Lock, or an equivalent, to the threads of the Shift Drum Stopper Plate bolt before reinstalling it.

   PARTS INFORMATION

   Shift Drum Stopper Arm/Plate Set
   H/C 2210300  P/N 24410-957-305

   Set includes:
   - Shift Drum Stopper Arm
     H/C 0476820  P/N 24430-041-010
   - Shift Drum Stopper Plate
     H/C 2210318  P/N 24411-957-670

   NOTE: These parts must be replaced as a set.

WARRANTY INFORMATION

The normal warranty applies. If you feel goodwill consideration is appropriate, contact your DSM for approval before starting the job.

Defect Code: 031
Failed Honda Code: 1076827
Labor Operation Number: 210125
Flat Rate Time: 0.6 hr.
Treatment Code: 1
ATC70—1973 AND AFTER
REQUIRED SPECIAL TOOLS
(This supersedes ATC70 #1, dated August 1983)

One **NEW** Special Tool has been added to the required list to service and maintain this model. This tool will be shipped to you automatically when it becomes available. The other tools listed below have already been introduced for this model or other models. If you do not have these tools, they can be ordered using normal procedures. You must have all the required special tools or their approved equivalents in your dealership as per Paragraph 8.4 of the Honda Sales Agreement.

Set-up Instructions

1985 Model
ATC70

WARNING WARNING WARNING WARNING

SET-UP AND PRE-DELIVERY SERVICE MUST BE PERFORMED BY AN AUTHORIZED HONDA ALL TERRAIN VEHICLE (ATV) DEALER. Proper set-up and pre-delivery service is essential to rider safety and reliability of the vehicle. When a customer takes delivery of his brand new vehicle he expects it to be in excellent running condition. There are few things that will cause greater customer dissatisfaction than poor preparation of a new vehicle. An error or oversight made by the mechanic assembling and servicing a new unit can easily result in faulty operation, damage to the vehicle, or even injury to the rider.

NOTE: Right and left are determined from the rider’s view.

METRIC SCALE FOR DETERMINING BOLT LENGTHS/DIAMETERS

Pay special attention to warnings, cautions, and notes.

WARNING means hazards or unsafe practices which could cause severe personal injury or death.

CAUTION: means hazards or unsafe practices which could cause minor personal injury or product or property damage.

NOTE: gives helpful information.
STEP 1—Cut straps and carefully lift off carton cover.

STEP 2—Remove crate wood top and plastic sheet.

STEP 3—Remove vinyl parts bag.

STEP 4—Loosen two front fork bolts. Remove rubber band holding handlebar to the crate frame.
**STEP 5**—Remove four bolts (two on each end) attaching steel crate frame to crate base and carefully lift off frame.

**STEP 6**—Cut strap holding rear wheels. Remove wheels. Retighten front fork bolts to specified torque.

Torque specification:
4.5 kg-m (32 lb-ft)

Remove bolts attaching front axle shipping bracket to crate base. Discard bolts and bracket.

**STEP 7**—Remove bolt attaching right rear wheel hub to shipping bracket. Discard bolt.

**STEP 8**—Remove front fender from under rear fender by removing rubber band.
STEP 9—Remove bolt attaching carrying handle to wheel hub and remove carrying handle. Remove bolt attaching left rear wheel hub to shipping bracket. Discard bolts.

STEP 10—Remove ties holding handlebar to front fork legs. Remove protective padding from front forks. Remove front wheel from behind front forks.

**NOTE:** Do not let the handlebar hang from handlebar switch wires.

STEP 11—Install handlebar on upper fork bridge as shown using two 10 mm lock washers and nuts. Tighten nuts to specified torque.

**Torque specification:**
4.3 kg-m (31 lb-ft)

STEP 12—Route engine stop switch wire harness and throttle cable down through cable guide as shown. Tighten screw securely and push cable guide up to edge of handlebar cover.
STEP 13—Unpack remaining loose parts and check against this illustration. Report any damaged or missing parts immediately to American Honda Motor Co., Inc., 100 West Alondra Blvd., Gardena, California 90247.

**Damaged or Missing Parts**

Identify missing parts by referring to the "Loose Parts List" at the end of the set-up. Order parts through normal parts ordering procedures.

It is necessary to differentiate between parts lost or damaged in transit, and parts left out by the factory.

- For parts lost or damaged in transit, file a SHIPING DAMAGE CLAIM.
- For parts left out by the factory, file a M/C WARRANTY CLAIM SO 908.
STEP 14—Route rear brake cable in front of throttle cable and insert end of rear brake cable into slot in brake lever. Pull cable back through slot in brake lever bracket.

CAUTION: Check that brake lever operates freely.

Adjust rear brake as described in Step 28.

STEP 15—Check for proper routing of cables and wire harness as shown.

STEP 16—Install carrying handle on frame, with curved end up, using four 8 x 16 mm bolts and lock washers. Tighten bolts to specified torque.

Torque specification:
2.2 kg-m (16 lb-ft)

STEP 17—Inflate rear tires to 2.2 psi. Install rear wheels as shown using three 8 x 20 mm bolts/lock washers for each. Tighten bolts to specified torque.

Torque specification:
2.2 kg-m (16 lb-ft)
STEP 18—Remove and clean front axle and axle collars. Place a padded block under engine to raise front forks.

STEP 19—Position front fender between fork legs with short end forward. Position flanged collars between fork legs and front fender.

STEP 20—Install front fender using four 6 x 20 mm bolts and plain washers. Tighten bolts securely.

STEP 21—Insert an axle collar into front wheel grease seal on each side. Inflate front tire to 2.2 psi.
STEP 22—Position front wheel between fork legs with valve stem on left side. Insert axle from right side, through right fork leg, axle collar, wheel hub, axle collar, and left fork leg. Install axle nut and tighten nut to specified torque.

Torque specification:
7.5 kg-m (54 lb-ft)

STEP 23—Insert cotter pin through slots in nut and hole in axle. Spread cotter pin ends as shown.

STEP 24—Install right and left step guards as shown using a 10 x 16 mm bolt/plain washer and an 8 x 25 mm bolt/lock washer for each. Tighten bolts to specified torque.

Torque specifications:
- 8 mm bolts: 2.2 kg-m (16 lb-ft)
- 10 mm bolts: 4.5 kb-m (32 lb-ft)

STEP 25—Remove oil filler cap/dipstick. Check engine oil level and if necessary add recommended oil as described in owner's manual or shop manual. Reinstall oil filler cap/dipstick.
STEP 26—Inspect fuel tank. If necessary, drain and flush fuel tank by removing fuel lines. Reconnect fuel lines, fill tank, turn on fuel petcock and check for leaks. Drain residual fuel from carburetor.

**WARNING** Fuel must be drained into a proper container. Gasoline is flammable and explosive under certain conditions. Do not smoke or allow flames or sparks near while draining fuel.

STEP 27—Adjust carburetor air screw, idle speed, and throttle free play as described in owner’s manual or shop manual. Refer to owner’s manual for use of speed limiter screw.

STEP 28—Place a block under ATC. Spin rear wheels by hand and measure free play of rear brake lever before brake starts to engage. Free play, measured at tip of rear brake lever, should be between 25–30 mm (1-1/4 in.). Use adjusting nut on brake operating rod at rear of ATC to make adjustment. Remove block from under ATC.
STEP 29—Remove drive chain inspection hole cover and check for a drive chain slack of 10–20 mm (3/8–3/4 in.). If necessary, adjust drive chain slack as follows. Stop engine and position vehicle to obtain access to chain tensioner plate through hole in skid plate. Loosen the two lock nuts and move tensioner plate to obtain correct chain slack. Tighten bolt lock nuts securely. Reinstall inspection hole cover.

STEP 30—Remove lubrication hole cover and lubricate drive chain using a commercially prepared chain lubricant. Reinstall hole cover.

## NOTE:
Check all items listed on the following Pre-delivery Service Check List. Refer to owner’s manual or shop manual for specifications and detailed procedures. Always test ride the unit to make sure that it is functioning properly.

## PRE-DELIVERY SERVICE CHECK LIST

- Adjust rear brake, check cable routing and check operation.
- Fill crankcase with recommended oil.
- Inspect fuel tank, drain and flush, if necessary.
- Drain residual fuel from carburetor.
- Check air cleaner. Clean and oil if necessary.
- Fill fuel tank, turn on petcock and check for leaks.
- Adjust carburetor.
- Check throttle lever free play, cable routing, and operation in all steering positions.
- Adjust and lubricate drive chain, if necessary.
- Check tire pressure.
- Inspect electrical component for proper operation.
  - Engine stop switch.

- Check security of all nuts, bolts, and other fasteners.
- Check to ensure that all applicable recall and product update campaigns are complied with.

- **TEST RIDE**: Check performance, handling, and operation.
  - Transmission and clutch: Ease of shifting, clutch operation, etc.
  - Acceleration: Smoothness, etc.
  - Cruising: Smoothness, etc.
  - Handling: Stability and cornering.
  - Brake: Smoothness and stopping power.
  - Idling: Smoothness, throttle response, return to idle.
  - Recheck idle speed after 10 minutes of stop and go operation.
  - Upon completion of test ride, check for fuel and oil leaks.
LOOSE PARTS
