**You don't need
another pickup or a
small utility tractor...**

Work a

**Quarter HorseTM
instead**

Quarter Horse™

But it can replace an expensive vehicle in your operation.

QuarterHorse can take you most anywhere on the place.

It can haul a quarter-ton

Handle a spring-tooth or disc harrow

Pull a big trailer load

Carry a compressor a spray rig

Hold a hundred things you need, every day.

Think of all the extra trips that wait for a tractor . . . of the endless errands and chores around the place that wait for your pickup.

Most of those jobs shouldn't wait until the big machines are free. You can do them better, for a lot less, with a QuarterHorse.

The QuarterHorse is a go-anywhere handy hauler for farm or ranch. It's so light of foot it can scoot you across fresh-plowed rows or a young crop with no bother. Yet the rugged 3-wheel QuarterHorse can carry a sizable load, and pull even more.

Economical to buy and operate, and easy to maintain, the QuarterHorse belongs on your place.

Nimble as a cutting horse

Strong as a mule

Tough as a goat

Handiest thing on 3 wheels

not a pickup . . . not a tractor

Independent Suspension
(Adjustable double shocks on all wheels)

Hydraulic Disc Brake
(Self-Aligning)

Wide Oval Flotation Tires
(Go over slippery or irregular terrain)

Dump Bed — Standard
(In 2 sizes — easily removed)

Hitchplate — Standard
(Takes most tow-behind accessories)

Electric Key Starter — Standard

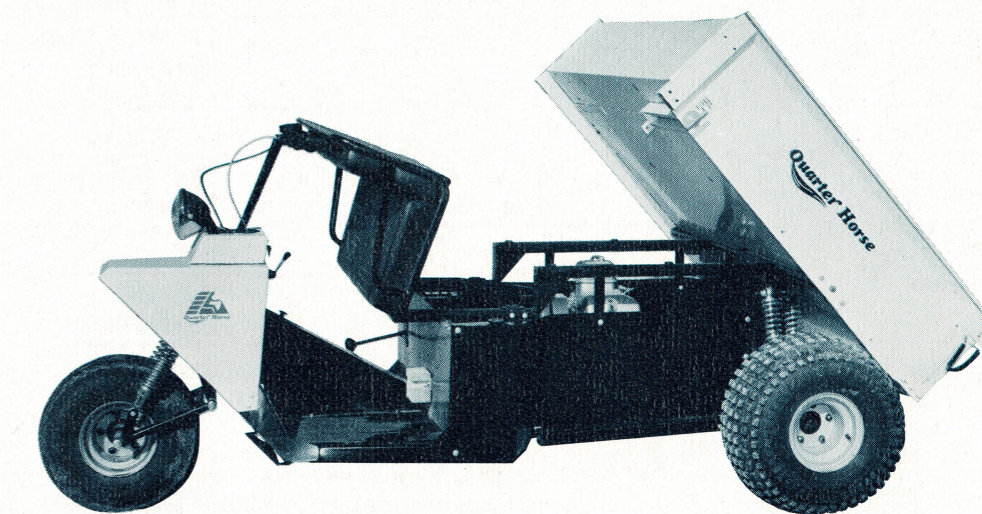

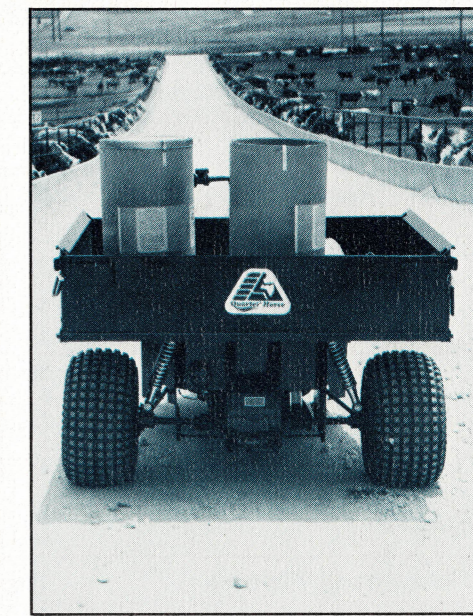

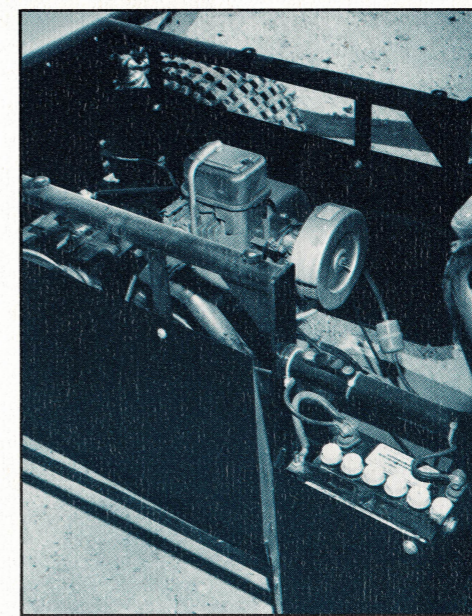

Separate Parking Brake
(Plus park lock safety on transaxle)

12-Volt Electrical System
(Solid-state ignition; integral 32-amp. alternator)

Headlamp — Sealed beam, automotive type

Full-width Bench Seat — Vinyl covered, 2-passenger

Positive Operator Control
(Hydraulic brake lever on left handlebar; twist-grip throttle with positive return on right)

What they're saying about QuarterHorse . . .

We're more than enthusiastic about the QuarterHorse Utility Truck. This type of vehicle has long been needed on large dairy farms.

The QuarterHorse is much more economical than a pickup; more versatile than a tractor. It's what's needed for checking irrigation, and it can go across alfalfa fields without damaging the crop.

With its wide tires and good flotation, it can go in a muddy dry lot, and it's ideal for taking milk to the calf barn, or for fogging insects. QuarterHorse could become a necessity for dairymen.

Dick Somer, Sales Manager, Brown Equipment Company, Hanford, California

It's the only way to go! The QuarterHorse is so sure-footed, our family calls it "the goat."

We live on a rather steep wooded hill. Our house has a 2½-story chimney built of large stones which we hauled up from the creek. With 500 pounds of stones and two adults, QuarterHorse made the hill with no problem, even in snow.

The good-sized rocks covering our driveway make it slow going with a car, but the QuarterHorse takes it full-speed. I think its 3-wheel suspension an asset, and the transaxle and torque converter work great. It gets constant use, hauling fertilizer, dirt, firewood or people. The youngsters are eager

to help, and it's much handier than the small tractor and trailer we used before.

Dave Kelley, President, Plastiform, Inc., Newbury, Ohio

We've used a QuarterHorse at the feed yards for quite some time. It's constantly busy, running medications, supplies and people from pen to pen, or pulling trailers. It gets hard treatment, but it's a tough machine.

Bob Josserand, Hereford Feed Yards, Hereford, Texas
