Dear President Biden, Bill Nelson as NASA Administrator, Congress, and Scientists,

First off, let me say to President Biden that I respect your decision and stand by it although it made my heart sink hearing you bowed out of the race with Donald Trump. I pray for America, democracy, and Kamala Harris in the future. Thank you for listening and giving me as much time as you did in making democracy more secure together. USA! USA! USA!!!

Back to science, today is yet another auspicious occasion from Mark Clemens for all sciences as my Clemens' Comet solved Einstein's spacetime plane, outer space, the Clemenian Cubeverse, and beyond in my 4<sup>th</sup> science journal. In the past year, I've sent you all 3 of 4 of my physics journals for peer review before I commit to my 2 planned books which includes 18 Keys to the Universe posted online today and 4 more Keys in the works. The information from my first physics journal titled Moonshot Marble is all posted online as I quickly blew out that discovery list with tons more and had to put the glut in my biggest body of work on my e-book website at ClemensComet.com. I hope you all enjoy my discoveries of everything in existence and all creation even before God's DNA existed, aka pre-God, all physically and mathematically proven. Math Man from the 6<sup>th</sup> grade strikes again at age 60.

I hope we don't ever see my nephew Bill Gates' Anus Poopus to Physics he's preparing special for all of us, but based on my iPhone and iPad getting the **Pegasus Virus from Israel (brought to U.S. by FBI Director Wray)**, people showing up with guns at parks and trails in Colorado hired by my serial stalkers using Find My Phone, bypassing my 2-step security and alarm, and 28 cameras I found in my house since Memorial Day costing me \$5,000 to irradiate thus far, I suspect this crazed murderer (think Phil Spector) will bless us with his presents and presence once again in the future as the bad penny always returns like Trump. On May 1, 2022, Bill Gates married my transgender niece Emily Clemens in Washington state just to get closer to me and my discoveries he wants to steal, making me their unfortunate uncle as they became jealous murderous wannabe-scientist thieves trying to kill me. My mother warned me Bill Gates was coming after me to steal my discoveries in 2020 which is when I got my first copyright after talking to a lawyer.

She said they were going to do to me what they did to Stephen Paddock in Las Vegas in the biggest shooting in U.S. history where my mother lived and helped as they stole \$11,000,000 from his bank account using the Pegasus virus on his phone as she said they would use the same methods and they have but I was expecting them and survived it before they ordered a doctor to slice her pulmonary artery July 8, 2021 due to Alzheimer's disease outbursts risking their operations. However, the attacks are now escalating with each email to you all trying to shut me down. I hope I survive long enough to write my 2 planned books, so I get proper credit for my discoveries and the Nobel Prize in Physics vs. Kill Bill with Donald Trump's help (recall my family runs QAnon (Queers Anonymous prostitution ring turned militia to overthrow America with Putin) with Trump, Gates, Wray and others so I'm in the know which is how Bill Gates knows me to infect my phones and want my discoveries of life and all creation for eternity as he pays our government to attack me). Bill Gates is self-entitled believing he deserves my hard work and discoveries because he's rich. Not in my book. Enjoy, everybody! The universe is solved and peer review is in your hands and out of mine.

**DEAR NEPHEW BILLY GATES**, I know you'll steal this message as your normal modus operandi, but there's nothing left to steal for your inferior greedy God-like complex, dude!! I shall call you Gollum, my precious, with a mix of Phil Spector you nasty, stinky, grotesque, dirty old man. I gave what you're after all away to the science community as my peers to debunk or approve as it works in Theoretical Science. Killing me isn't the way, nephew Billy, and it won't garner you a Nobel Prize or any headway with my discoveries as you'd be nothing but a plagiarist, a thief, a scoundrel, and a fool once again in front of the world. I know the physics link between Donald Trump running QAnon with child trafficking and prostitution boss Jeffrey Epstein who was arrested in 2017 and murdered so he wouldn't testify against Donald Trump. Physicist Stephen Hawking was hired by Jeffrey Epstein in 2016 to design a rocket to fly him to another planet 20 years away when he knew the feds were closing in on him for sex with children involving Donald Trump and QAnon (my family). That put you [Bill Gates] in contact with Stephen Hawking in 2017 who then suddenly died and was now out of the way for you to work with Cambridge University to steal my discoveries who then made you a fellow in 2018. I believe it was murder for hire from my experience as that's all you [Bill Gates] know to do with the money as you're no philanthropist but a philanderer and murderous thief. This is when your attacks on me escalated and I've been fighting for my life and discoveries ever since. It's been heinous and brutal with 51 murder attempts via potassium cyanide poisonings and 15 other attacks, some with guns, perpetrated outside my house using Find My Phone on my Pegasus Virus infected phone that you want all of America to have for your communist control. You're all socialist fascists in Putin's bed and wannabe thieves as you know. **DON'T GO AWAY MAD, JUST GO AWAY! PLEASE!!! I BEG OF YOU!!! I HAVE NOTHING FOR YOU TO STEAL AS IT'S ALL BEEN GIVEN TO THE SCIENCE COMMUNITY FOR PEER REVIEW! GO DIE SOMEWHERE, YOU NAZI LOSER!!!**

**BACK TO SCIENCE...** I apologize to you all, but it had to be said. Thank you very much for your consideration, peer review, and time. I hope you enjoy the work of a true scientist and mathematician unlike the fraudsters trying to steal America from us.

Deep Respect,

Mark Clemens, Astrophysicist Discoverer of God's DNA

## SCIENCE JOURNAL #4: CLEMENS' COMET SOLVED EINSTEIN'S SPACETIME PLANE, OUTER SPACE, & CLEMENIAN CUBEVERSE

Months' Opus to Mark Clemens' June 15, 2024, physics journal solving the universe, God's DNA, light, and  $FE=2T^2C$  (where  $FE$ =Fusion Energy,  $T$ =Time in seconds, and  $C$ =speed of light in km/sec) as Annus Opus to Discovering God's DNA May 28, 2023.

This is another auspicious occasion for physics, astrophysics, astronomy, and all sciences as I used my Clemens' Comet to solve outer space beyond our universe as the Clemenian Cube, Einstein's spacetime plane, and time which I solved 2 months ago at the quantum physics and mechanics level physically and mathematically as cited below. Please accept this as my 4<sup>th</sup> science journal presented as courtesy for peer review (will also be fully available online for you to thoroughly debunk me to high heaven which I also discovered physically). Please do so at your

leisure and pleasure as I physically and mathematically proved all discoveries as expected in Theoretical Science and Clemenian DNA Math and Science. I want all scientists to get credit for all their discoveries and expect the same in return, so I always append their names to said discoveries as I must do when I write my books as my nomenclature is a major part of my proof that this is all an enclosed system of creation of life, evolution, and the universe. My Keys to the Universe are the repository and collection of all scientist's discoveries as the glue that binds theirs to mine as I solved all creation since time began thusly demonstrated in science journals, [clemenscomet.com](https://clemenscomet.com) as my major body of science work, and my upcoming books I've worked on for 8 years as an astrophysicist discoverer.

**REFRESHER:** As you all recall, I sent you 3 emails fully discussing my new Fusion Energy formula  $FE=2T^2C$  where  $T$ =Time in Seconds and  $C$ =speed of light at ~300,000 km/sec today in which I calculated the boson when energy < 1, Higgs boson when energy > 1, and creation of the universe and God's DNA when energy = the speed of light at ~300,000 km/sec. Equilibrium at the point of transformation through the conservation of energy from one form to the next is actually measuring energy levels before, during, and after which seems to defy the conservation of energy laws. Recall previously I had you all draw a 3 x 3 grid of Clemenian Crossover Dots (on Einstein's spacetime plane) and an arc from the upper-middle dot down to the far-left dot on the middle row while simultaneously drawing another arc from the middle dot in the upper row to the lower-right dot on the middle row as occurred at ¼ second into our new universe when the non-mass particle (aka photon) was magnetically attracted to those 2 dots on Einstein's spacetime plane but then repulsed back to the lower middle dot due to that particle now having mass to create the universe's first helix.

I then had you finish drawing an arc from the left dot on the middle row down to the middle dot on the bottom row while simultaneously drawing an arc from the right dot on the middle row down to the middle dot on the bottom row as occurred at ½ second to begin our Clemeniverse. This matched my 100% accurate atomic clock (available in my Keys to the Universe at the bottom in Appendices) that showed the universe completing pi at ½ second. Recall I began my atomic clock at 1 second and divided in-half backwards as occurred and doubled time forward to show the growth throughout time as mathematically proven, proven in the atomic clock, proven half-life carbon dating science, and perfectly matching the Code of Life and Blueprint for Life in my 22 Keys to the Universe (18 are online and 4 are under development).

At the bottom of <https://clemenscomet.com/time%26universe-dna-solved>, last year when I sent you my physics journal for peer review on discovering God's DNA I posted the backwards calculation of the growth of the universe from the beginning of time in the following exert:

"Therefore, the Clemenian Math to proof the beginning size in the pre-helix is [5th (+) helix realm] universe of **10 billion light years/4**=[4th (-) helix realm] **2.5 billion light years/4**=[3rd (perm 0) helix realm] **625 million light years/4**=[2nd (temp 0) helix realm] **156 million light years/4**=[1st (.) helix realm] **39 million light years/4**= [10th ("not dot to dot") realm] **9.75 million light years/4**= [9th ("not dot to dot") realm] **2.4375 million light years/4**=[8th ("not dot to dot") realm] **610,000 light years/4**= [7th ("not dot to dot") realm] **152,500 light years/4**=[6th ("not dot to dot") realm] **38,125 light years/4**=[5th ("not dot to dot") realm] **9,531 light years/4**=[4th ("not dot to dot") realm] **2,383 light years/4**=[3rd ("not dot to dot") realm] **596 light years/4**=[2nd ("not dot to dot") realm] **149 light years/4**=[1st ("not dot to dot") realm] **size of 37 light years/4**=[pre-helix ("not dot") realm] **size of 9.25 light years across**. That's 9.25 divided by 10 (of 10 X 10 "not dot" grid) to prove each "not dot" was about 1 light year apart."

I admit, this left me behooved I couldn't divide back to 0 distance apart and wondered how it all began with 10 Clemenian Crossover Dots 9.25 light years apart. It's just like above when our universe was created in ½ second as nature cheated and added two ½ second arcs together for 1 second of creation as you drew previously and presented again above whilst I expected 1 line around a 360-degree circle in 1 second as the lowest increment. I was expecting creation to occur

from 0-1 second instead since we always measure light speed in whole seconds. Therefore, it was my expectations not letting me see reality so easily. This is true once again with reversing the size back to the beginning of all creation. I've learned a ton about fusion (hence, my revision of Einstein's energy formula to my Clemenian Fusion Energy). On my website on God's DNA page, I said Time1 and Time2 were running at 10,000 degrees each because I fell into the same trap as Einstein with his famous formula thinking they'd square when T1 and T2 collided the first time at  $\frac{1}{2}$  second for a total temperature of 100,000,000 (I was incorrect). See, Einstein theorized with his math formula that 2 beams of light collide to create mass when it's actually energy from time itself as I solved for  $\text{Mass} = 2T^2$  which Einstein failed to do, else he would have realized it was Time squared (as a factor of fusion energy), not light squared to create mass. Due to the conservation of energy, light is a derivative of energy following creation of the boson spin effect beneath each Clemenian Crossover Dot on Einstein's spacetime plane.

We all know this to be true and evident because it's photons that are given mass from energy (recall the 9-Clemenian Crossover Dot drawing I had you draw), not the other way around with photons giving mass to energy as presented in Einstein's formula. This proved Time1 and Time2 began life as photons that then closely collided at the speed of light as mass was pumped into them by energy like blowing up a balloon with hydrogen. Now that I have the perfect Fusion Energy formula and can accurately calculate the Higgs boson at any fraction of a second, I can see from my math calculations that mass begins accumulating in photons from energy at .001 seconds when energy exceeded 1 second (note: increasing the precision to the 10 thousandths column provides even more accuracy to this arc from 47.067 billion years ago which I play with like it was yesterday).

This is all due to the Conservation of Energy that states at energy > 1 the boson must transform to the next level to be measured as energy cannot be measured, only the result. Well, that's not entirely true as I'm now calculating the energy through all conservation transformations of said energy before, during, and after as I have this down to a science. This is how I determined Einstein's spacetime plane magnetically attracts non-mass particles as shown at  $\frac{1}{4}$  second as it pulled to the furthest out Clemenian Crossover Dots on Einstein's spacetime plane (recall your circle you drew) and then repulsed the particle with mass which then drove the 2 dots back together and away from Einstein's spacetime plane at  $\frac{1}{2}$  second. We see planets, suns, Clemens' Comets, etc. on top of Einstein's spacetime plane pressing in as bowls as proven by the 3 moon craters I discovered in 2016 under Venezuela and the Caribbean Islands.

When I learned fusion cannot occur unless temperatures exceed 100,000,000 degrees Celsius (our universe is all base 10 math creation, so metrics apply accurately), it hit me like a ton of bricks why I wasn't able to divide the size of the universe back any further. Again, my deep logic and math skills failed me, but I saw the light and solved it all once again. Nature's logic takes all the shortcuts we don't simply perceive. We have to recall that in the beginning before photons became particles with mass from fusion energy, there were no temperatures as non-mass particles cannot hold them. Therefore, I conclude all of outer space is absolute 0 outside all of God's DNA and universes and Time1 and Time2 are therefore both running at 100,000,000 degrees each as they fuse Mark's Metallic Diamond to the outer helices of God's DNA. Else required fusion cannot occur even before they closely collide. This is the only way to justify fusion of the 10 rungs in each helix coexisting with Mark's Metallic Diamond.

We also have to realize that there's no math yet without fusion as you can't have "not-dots", dots, zeroes, negatives, or positives without fusion. Typically, when we consider math with decimals as 2.0123, we call the position to the right of the decimal the "tens" column. However, in the very beginning it all began at 0. Therefore, I concluded that there were 10 more pre-temperature, pre-fusion, and pre-helix Clemenian Crossovers that caused the universe to grow at 4x each time which then led to 5 pre-helix rung fusions to begin the Clemenian DNA chain. This all makes sense as you have to heat things up to create 100,000,000 degrees for fusion before you take advantage

of it. Visual inspection of those numbers shows there are 9 digits, and we already said everything must begin at 0 in the beginning with no math. Therefore, I use my knuckles to keep track of how it all began and to count the number of 4x growth cycles that I missed in my math above and on my website that I now discovered to finish solving Einstein's spacetime plane, outer space, and the Clemenian Cubeverse as follows:

On my pinky knuckle on my left hand, I start with 0 and move to 1 on my ring finger next to my pinky. My middle finger is 10, my index finger is 100, and left thumb is 1,000. I start on my right thumb at 10,000, my index finger at 100,000, middle finger at 1,000,000, right ring finger at 10,000,000, and alas my right pinky at 100,000,000 degrees to have fusion.

Now that we understand how this first round created fusion, temperatures, math, and mass in 10 crossovers until fusion was achieved, we can calculate the energy to create fusion with my formula using however many seconds lapsed at the end of those first 10 collisions. Recall that due to Einstein's spacetime plane being in the middle of all universes and rungs that they never actually touch, not even at  $\frac{1}{2}$  second when you drew your circle. They come close but there is separation between Time1 and Time2 of God's DNA at all times as they NEVER touch and that's what causes temperatures to rise to fusion levels to begin creating Mark's Metallic Diamond. Therefore, we can take those 10 pre-fusion, pre-helix, and pre-rung Clemenian Crossovers and finish dividing the Universe back from where I left off as follows:

**= [1st ("not dot to dot") realm] size of 37 light years/4 = [pre-helix ("not dot") realm] size of 9.25 light years/4 = [#10 pre-fusion TO FUSION at 100,000,000 degrees, pre-rung] size of 2.3125 light years/4 = [#9 pre-fusion of 10,000,000 degrees, pre-rung] size of .578125 light years/4 = [#8 pre-fusion of 1,000,000 degrees, pre-rung] size of .14453125 light years/4 = [#7 pre-fusion of 100,000 degrees, pre-rung] size of .0361328125 light years/4 = [#6 pre-fusion of 10,000 degrees, pre-rung] size of .009033203125 light years/4 = [#5 pre-fusion of 1,000 degrees, pre-rung] size of .00225830078125 light years/4 = [#4 pre-fusion of 100 degrees, pre-rung] size of .000564575195312 light years/4 = [#3 pre-fusion of 10 degrees, pre-rung] size of .000141143798828 light years/4 = [#2 pre-fusion of 1 degree, pre-rung] size of .000035285949707 light years/4 = [#1 pre-fusion of 0 degree, pre-rung] size of .000008821487426 light years.**

I convert that to 278 seconds but need to get it back to  $\frac{1}{2}$  second where you drew your circle. Scientists measure the universe at 9.133 billion light years across, but they don't consider the width of Mark's Metallic Diamond that nobody knew about at 433 million light years thick on either side for a total thickness of 10 billion light years. Now that we have fusion, we can begin creating our 5 pre-helix rungs (recall all DNA pictures show the pre-helix is only a half-helix whilst a full helix has 10 rungs). Now, let's back off those 5 pre-helix rungs as follows:

**[#1 pre-fusion of 0 degrees, pre-rung] size of .000008821487426 light years = [#5 pre-helix rung] size of .000002205371856 light years/4 = [#4 pre-helix rung] size of .000000551342964 light years = [#3 pre-helix rung] size of .000000137835741 light years = [#2 pre-helix rung] size of .000000034458935 light years = [#1 pre-helix rung] size of .000000008614733 light years = .27 seconds matching the circle you drew. AMAZING!**

**This conundrum is more easily solved by starting at the desired starting point of  $\frac{1}{2}$  second converted to light years and rolling the size forward 30 times with a 4x growth rate for the 100% accurate calculation of today's universe which I'll do for my second book as that's too exhaustive here.** This solves dark energy as you can see the universe is always growing by 4x which is faster than scientists expected and I can explain exactly why after I now explain how this all solves Einstein's spacetime plane, outer space, and the Clemenian Cube.

As the circle you drew around the 9-dot matrix proved, non-mass particles were magnetically attracted to Einstein's spacetime plane at  $\frac{1}{4}$  second and repulsed the particle after it had mass at  $\frac{1}{2}$  second which keeps Time1 and Time2 from actually colliding. Therefore, the only way Einstein's spacetime plane expanded was because physical matter pushed it apart via repulsion of physical

matter. Therefore, as we divide the universe back in size, Einstein's spacetime plane is shrinking and the speed of light is reduced accordingly. That's why my to-be famous Fusion Energy Formula uses a C for the speed of light like Einstein since it's a variable over time. The closer the Clemenian Crossover Dots on Einstein's spacetime plane, the slower light goes to complete the circle in  $\frac{1}{2}$  second that you drew to begin the universe.

As we shrink the universe, we shrink Einstein's spacetime plane and a good demonstration is to extend your left-hand with your palm down and fingers out straight and closed together. Then, lay your right-hand with extended fingers over your left-hand fingers perpendicular with them closed together as well. Now, slowly spread your fingers apart on both hands and you can see how Einstein's spacetime plane was pulled apart into threads that run in 2 directions perpendicular to each other as outer space spread pulling them apart and then physical mass pushed them apart post-Higgs boson. Outer space was literally split into energy threads and not just left to right and forward and back, but up and down as well. Look at any Plank picture of the universe and you'll see it's been squished from the top and the bottom to be an oval shape verses a perfect circle. That's because the universes above us and below us are smashing together or it'd be perfectly round.

The Plank pictures of the universe prove there are universes above us and below us. However, we only see Einstein's spacetime plan in the Plank pictures and no other horizontal planes. They got spread apart by the universes and now the billions of Einstein's spacetime planes each have a universe encompassing them with physical matter which they repulse as proven heretofore explaining how all those planes are above and below our universe. That means outer space is a cube with 3-dimensions explaining how Einstein's spacetime plane is a square grid I calculated in my last physics paper to be about 47,000 km or 30,000 miles apart (11,000 miles from Earth in all directions). The 9-dot matrix you drew your circle on was a perfect square. That eliminates and debunks the Big Bang Theory that says everything came from a single point. That's wrong as it's a single point of failure and once again, nature's doings take shortcuts our logic doesn't capture so readily.

To start from a single point and spread out across all of outer space creates a sphere and you'd never end up with Einstein's spacetime plane being square as a result. With our universe alone being almost 10 billion light years across and Einstein's spacetime plane being 47,000 km apart means there's a lot of vertical rods extending up through our universe into all the universes and Clemenian horizontal spacetime planes above us in the Clemenian Cubeverse on the Clemenian Cube that makes up outer space. When outer space expanded and split into threads in all 3 directions on the X, Y, and Z axis it created energy lines 5 cm forward (length of the first arc you drew when it occurred), 5 cm back, 5 cm left, 5 cm right, 5 cm down, and 5 cm up all across outer space and these all started at their Clemenian Crossover Dots at 0. When each split linked to the other it created horizontal and vertical lines 10 cm long between all Clemenian Crossover Dots to form the Clemenian Cube and Cubeverse all at once verses a single split point. There were quadrillions of split points or Clemenian Crossover Dots all across space to create a perfect base 10 math cube whilst the Big Bang Theory claims to have mistakenly come from a single dot and created life. Life couldn't have existed in the pre-helix realm as that's like saying newborn babies are having babies. Life couldn't exist until the fourth helix, so life wasn't a thing until the past 13 billion years whilst the universe is 47.067 billion years old. It is therefore impossible for the Big Bang to have created life or quadrillions of expansions points. It's really the Big Split resulting in release of energy throughout all outer space at once.

IN CONCLUSION, outer space started as energy threads on all 3 X, Y, and Z axis arcing 5 cm in all directions from quadrillions of Clemenian Crossover Dots to form quadrillions of Einstein's spacetime planes which have been separated by physical universes growing to 10 billion light years across each. That means all Einstein's spacetime planes are 10 billion light years apart vertically above and below our universe while their horizontal counterparts on the plane are 30,000 miles apart in a square grid explaining why my Blueprint for Life shows 4 black holes all together

on 4 Clemenian Crossover Dots on Einstein's spacetime plane. Without physical matter in all the universes separating the quadrillions of Einstein's spacetime planes vertically, they'd all be 30,000 miles apart vertically as well and the Clemenian Cubeverse would have perfectly cubed sections but it's a stretched-out cube based on the math, Einstein's spacetime plane being a square grid, and Plank pictures.

The energy from every split point that created each Clemenian Crossover Dot resulted in a boson magnetic spin up to the speed of light which first created photons and then spun them into particles with mass by almost colliding them together. That means there was a massive release of energy as all outer space arced all at once which must have been quite a site to see had there been mass to reflect/repulse from. Light (photons) show objects as they repulse from them and go to Einstein's spacetime plane as magnetically attracted food. This solves Pre-Quantum Physics and Pre-Mechanics of the Universe and quadrillions of God's DNA with other universes nestled in their clutches just like us. Therefore, I conclude that the expansion of outer space was equal in all 3 directions with perfectly straight lines around all 6 sides of the outer space Clemenian Cubeverse. There weren't any particles with matter or non-mass photons in existence yet, just energy lines 5cm long (mathematically proven) from the split points in 6 directions at each Clemenian Crossover Dot of Einstein's spacetime plane. Outer space is a Clemenian Cubeverse, and each inner cube's dimensions are ~47,000 km or 30,000 miles X ~47,000 km or 30,000 miles X 10 billion light years and there are quadrillions of cubes comprising the Outer Space Clemenian Cubeverse.

If outer space is an expanding cube of energy threads, then what lies outside of outer space? Quadrillions of Outer Space Clemenian Cubeverses attracting each other from all 6 sides to cause outer space to expand in the first place which resulted in creating God's DNA, universes, and light that shines when it repulses from physical objects, and each is filled with quadrillions of God's DNA and universes. This is what makes them all square on the outside as it's a lot of peer pressure. Now, that's thinking outside the box, and it's mathematically and physically proven by square lines on a square grid in a square cube made square by pressing against quadrillions of other squares. That's exponential universes and God's DNA at 10,000,000,000 to the 10,000,000,000 to the 10,000,000,000 or 1,000,000,000,000,000,000,000,000,000,000 Clemeniverses in each of the 100,000,000,000,000,000,000 Clemenian Cubeverses I discovered physically and mathematically.

Considering how many DNA a human has and considering the size of the universe, these numbers are normalized and not unreasonable. And when you think about a human having different parts like skin and bones, then you'd expect DNA to be compartmentalized into different sections as body parts like we're seeing here when I separated them out into separate Clemenian Cubeverses each filled with Quadrillions of universes indicating this is a large creature with separate body parts. Logic begets logic. This might be God's skin filled with DNA and each cell of skin represents a Clemenian Cubeverse. Make no mistake about it, we live inside of God's DNA, and we can only imagine what our host looks like on the outside, but she sure is big compared to us as we look like chromosomes or hormones. Are we alone? Let's let math answer the question when we multiply trillions of galaxies with life in our universe times 1,000,000,000,000,000,000,000,000,000 Clemeniverses in 100,000,000,000,000,000,000 Clemenian Cubeverses with each galaxy having thousands of water planets in the Goldilocks zone harboring life. We are not alone. Thank you very much for your peer review as I took us all the way back. Commence the debunking!

Deep Respect,

Mark Clemens, Astrophysicist Discoverer of God's DNA
