Subject: RE: First Discovery of Life's Creation in the Universe

Ladies and Gentlemen,

Today, I give NASA, ESA and the rest of the world my Keys to the Universe in my fully evidenced Theory of Life including my Blueprint for Life: Solar System Creation, Code of Life, Universal Life Cataloging System and Universal Comet Cataloging System all correlated with the Meteor Shower Schedule giving us dates for all major life altering occurrences for the first time ever. These are good enough for God! Not only did I completely solve the mystery of every meteor shower and fully explain the fireball phenomena, I solved the greatest mysteries facing mankind on how, when, what, where and why our Solar System and life were created and what motivated evolution to make way for mankind including fully defining and documenting the creation of mankind.

I solved the mysteries behind the mystery of the lack of oxygen stabilization on Earth until 580Mya, Cambrian Explosion mystery 540Mya, Bermuda Triangle mystery 65Mya, Moon creation mystery 65Mya including learning it was previously Earth's core, New K-Pg Boundary 65Mya, found evidenced-cause of every major geological event on Earth 65Mya (supported by ESA's Geoid Gravity Model), discovered how, when, what, where and why we got our Magnetosphere and atmosphere 580Mya and fully defined every meteor shower throughout the year correlating that schedule with every major evolutionary event that ever occurred, telling mankind for the first time ever the exact date of each event and what each meteor shower represents. I also discovered my new Polar Gravity on Einstein's Space-Time Plane/Elliptical Orbit Plane which right-sides planets (supported by ESA's Geoid Gravity Model), moons and other stellar bodies putting the heaviest mass in the south like a bobber on the water. The meteor shower link discovery now gives us the ability to do calendar math between events for various interesting calculations. This is how I knew the lean of each blade of my Solar Fan in relation to Earth's orbit to perfect my Blueprint for Life which gave way to the retrograde of Halley's Comet predicting it was from an impact with Earth involving the first creation of life and that it will hit Earth again.

These Keys are applicable to life-sustaining Solar Systems throughout the Universe and are adaptable to fit all life forms and track all comets and impact craters throughout the Universe even if they bounce planet to planet. Today's nomenclature and cataloging tend to be for simple astronomical situations involving only our planet or one rock at a time whilst my tools provide a Universal Life Cataloging System adaptable to any situation. In order to fully track Clemens' Comet through Keplerian orbits, my system was the only nomenclature I found that worked. It enabled me to create the first ever fully evidenced blueprint of our Solar System correlated with: 1) all Meteor Showers, all craters on Earth, 2) every event on NASA's Epic Evolutionary time schedule, 3) scientist's studies and theories on creation of life and our Solar System including time estimates, 4) speed and mass calculations matching from Super Nova down to creation of the Moon and all points in between and 5) tracking and correlation of other stellar objects and orbits. My Solar Fan that has proven to be accurate at 14 of 14 points of the Meteor Shower Schedule after 4.5 By of reverse engineering and holding true through forward engineering of all NASA's Epic Evolutionary time schedule and all Solar System creation events, enabled me to make the first ever

predictions of future impacts. My Theory of Life has been proven at all levels and is ready for the world's use and scrutiny; it'll be challenging to argue with what is.

My Blueprint for Life: Solar System Creation shows my discovery of the Solar Fan with 5 blades for the beginning of life-supporting Solar Systems: 1) Nova Blade-close in Clemens' Comet debris from creation remaining on Super Nova side of Earth from Solar System creation day, consists of meteors and asteroids, 2) Planet Blade-close in planets and left over creation Clemens' Comet debris on opposite side of Clemens' Comet impact, consists of meteors and asteroids, 3) Meteor Blade-post creation Clemens' Comet to Earth impact debris opposite the Comet Blade on either the left or right at approximately a 90 degree angle from the Nova Blade, consists of meteors and asteroids after splits from impacts of Earth with Outer Blade comets, 4) Comet Blade-post creation comets from the Outer Blade hit Earth and split into smaller comets (much larger than the impact debris of meteor showers but smaller than Outer Blade comets) on either the left or right directly across from the Meteor Blade at approximately a 90 degree angle from the Nova Blade and the 5) Outer Blade-post creation Clemens' Comets that missed the Sun and went long before returning for impact on Earth; they have one side of their orbit in common with Earth's orbit resulting in the impacts every 1.5By (1By for the first round orbit before being knocked elliptical) which split into the Meteor Blade and Comet Blade post impact with Earth. Each planet would have their own blades which would be in similar orbits and impact times as Earth, creating other Planet blades is out of scope for my Theory of Life but I could see this as a needed exploration area. Just like having a Geoid Gravity Model for all planets would be a great to have. I can also see my Solar System blueprint applied to other Solar Systems modeling their Solar Fans and hopefully shattering my discovery of the 1st creation of life in the Universe 3.5Bya.

If our space agencies are serious about space exploration and finding life on other planets, then we need to have the appropriate tools and be prepared for what we may find when we begin traveling freely in space. My one suggestion may or may not be feasible, but I leave that up to NASA, is to look at spectrums of light emitting from other planets in the Goldilocks Zone in the spectrum as manmade light, i.e. incandescent lights, fluorescent light, LED light, etc., to show intelligent life exists there or not. Perhaps extraterrestrial life forms are looking at our manmade light spectrum. If they can see us, then we can see them. Do I believe there's other life out there? Absolutely, as a math pundit I embrace statistical probabilities, combinations, permutations and odds that if an impact with energy equal to some number can generate life on Earth, then the trillions of impacts in the Universe with energy equal or greater than that number can then too generate life on another stellar body. We're limited by our ability to travel at hyper-velocity, our imagination and our tools are the only reasons we haven't found other life yet.

As we see from OME (Ocean, Magnet, Energy) for humans, a lot goes into the transition of that life and it may not necessarily be as evolved as humans or could be hyper-evolved to an energy state. Energy seems to be a form of sublimation for all matter in an equal and opposite reaction kind of way, meaning energy can create mass therefore energy can un-create mass. When we look at stars and see the dust spewing from a new born dust cloud, we see energy creating mass from nothing (Higgs boson field) as dark matter is the exhaust, and in a black hole we see mass and dark matter combining back to energy (Higgs boson field). Can matter cross back across the Higgs boson field sublimating back to energy again? I believe this has been a one direction test to date. I solved a lot but many questions exist in science and I think I just took us to the next level of questions but at least those questions can now start to be asked of our Universe at large rather than simply within our small Solar System. I solved this through pattern matching, theories and a ton of research for answers which kept taking me to the next level. It's all very mathematical and something I noticed that was very odd and that's that every impact

affecting life was on the same day of the week for 4.5 billion years from the very day of creation when Clemens' Comet hit a planet in another solar system and ignited our Sun; impact A2 was the only day that was 3 days before all the others. In 2016 that day is Tuesday and what's interesting about that is that on Tuesday, February 16, 2016 I discovered the crater that created our Moon and on Tuesday April 19, 2016 I discovered the Meteor Shower correlation in unlocking the Code of Life.

In conclusion, if we're to look like we're exploring deep space, we should have the tools and preparation in place to support that appearance and endeavor. I was hoping to see a real-life Star Trek in my lifetime, but I believe bigger steps need to be gained in deep space or tourists in shallow space before that can happen. I believe that's where many people want to go with our space exploration if you ask them. Mars will certainly be a journey in the right direction but it's still not touristy and attractive to the masses as space travel for the general public would be, even if just short journeys up and back. Yes, the general public wants to know if there is other life in the Universe and new generations generally accept there is verses my generation that were skeptical but more importantly everyone wants to see humans traveling freely into and around space. If it's that hard to find life, then humans can no longer fear going into space if we can make it safe to travel back and forth and I hope my contributions help in that endeavor. I'm certain my Keys to the Universe and Theory of Life will unlock a whole new level of exploration and understanding for mankind as we search for higher understanding and purpose as a society. Thank you and look for my book Clemens' Comet: Keys to the Universe.
