Dear Mr. President, Mr. Nelson as Director of NASA, Congress, and All Scientists,

My battery died causing an incomplete message previously: **This is a most auspicious occasion of epic proportions for NASA, physics, and science as I solved Quantum Physics and Mechanics of God's DNA and the universe mathematically and physically.** Welcome to my PHYSICS JOURNAL: CLEMENIAN SCIENCE AND GOD'S DNA MATH ANNUS OPUS (both attached and printed below my signature for website posting) from last year's discovery of God's DNA with my 18 Keys to the Universe (21 today). I solved the speed of light and how light works with the creation of the first Higgs boson (God Particle) and the existence of Einstein's spacetime plane well before the universe and well beyond our known universe. I've had several communications with many of you since 2016 divulging my amazing discoveries that have now led me to solving Quantum Physics and Mechanics of the Universe mathematically and physically. Theoretically speaking, of course, as that's how Theoretical Science works as I either get debunked or accepted just as I debunked several well-known prior theories and replaced them just as others in science have done.

When I designed Clemenscomet.com, I meant it to be a database housing everyone else's science discoveries in a single sensical repository as many have already done the work I needed to bond with my glue. I'm not changing any science but adding Clemenian Science and DNA Math and am glad many did the work before me to link my discoveries right in with theirs. This pursuit of mine tracking my Clemens Comet back in time all the way to God's DNA resulted in me mathematically and physically solving the universe (see attached GODS DNA UNIVERSE QUANTUM PHYSICS SOLVED.pdf also in plain below my signature). I consider the attached solution to be the 21<sup>st</sup> Key to the Universe and will post it on [clemenscomet.com](http://clemenscomet.com) as such where I house my other amazing discoveries I've been sending out since 2016. All of my discoveries at [clemenscomet.com](http://clemenscomet.com) are triple copyright protected per attorneys from February 2016 forward and any challenges to any of my discoveries will have to predate said date. Nobody to this day has even suggested they have any discoveries even closely resembling or challenging mine so there's no contention I'm aware of and I won all these discoveries at [clemenscomet.com](http://clemenscomet.com) outright.

I hope you enjoy my physics solutions and realize I have more major discoveries than all physicists and astrophysicists combined which I believe makes me one of the greatest physicists and astrophysicists ever born. I proved my math is better than Einstein's and almost all of my discoveries are physical and mathematically proven, not theoretical. And I discovered way more physically than Einstein ever theorized. I found the holy grail and solved it all. Thank you and please feel free to ask questions or make responses as I'm a very nice person with a great disposition and love discussing my discoveries with anyone that wants to hear them.

P.S. Somebody should inform Cambridge University that the Quantum Physics and Mechanics of the universe and God's DNA are solved and they'll never be the publisher since they're working with Bill Gates and Donald Trump to steal from me.

Deep Respect,

**Mark Clemens**

**Astrophysicist Discoverer and Nobel Prize in Physics Candidate at Clemenscomet.com.**

Math Prodigy and Savant with 21 Keys to the Universe and God's DNA.

Physically and Mathematically Solved Quantum Physics and Mechanics of the Universe.

Established New K-Pg Boundary 66mya with 3 Moons in the Venezuela Basin.  
 Inventor, CEO, IT Engineer with Forensics and Big 6 Auditing.  
 B.S. Financial Accounting.

## QUANTUM PHYSICS OF GOD'S DNA, LIGHT, AND UNIVERSE SOLVED PHYSICS JOURNAL: CLEMENIAN SCIENCE AND GOD'S DNA MATH ANNUS OPUS

**ABOUT THE AUTHOR AND ASTROPHYSICIST DISCOVERER AT [CLEMENSCOMET.COM](http://clemenscomet.com):** Hi, my name is Mark Clemens, 60-years-old, and I sent you and others in physics, science, and NASA my incredible physical astrophysicist discoveries after first discovering 3 moon craters in the Venezuela Basin and 2 more under Venezuela before South America was sucked down the moon holes with the world's oceans February 2016. From your perspective and possible review of [clemenscomet.com](http://clemenscomet.com) previously, it may appear a guy with an accounting degree and no formal physics training or science background came out of the blue **to solve the universe physically and mathematically versus theoretically** resulting in my amazing physical discovery of God's DNA. That's a warped perspective requiring further exploration. We all started somewhere.

I have 10 Years accounting experience including forensics auditing with my B.S. in Financial Accounting working for the Department of Defense (DoD) selling military weapons, nukes, and training to the Netherlands, Denmark, Belgium, and NATO Headquarters as a U.S. Ambassador (ret.). I retired at age 31 and now have 20 years consulting as a senior level IT Engineer and Oracle/SQL Server Database Administrator (DBA) on Windows/UNIX/Linux. I retired again at 51 with Havana Syndrome and now have 8 years as an Astrophysicist Discoverer physically and mathematically solving Quantum Physics and Mechanics of God's DNA (I discovered that and notified you 1 year ago) that was never-before theorized. **My first science journal was titled Moonshot Marble** published in my emails to NASA and world scientists February 2016 about discovering the 3 Moon craters in the Venezuela Basin, but I soon made amazing discovery after discovery daily resulting in weekly emails for 3 months to my science dream team before I finally capitulated to journaling it all online for 2 books to be published after realizing science journals and email chains paled in comparison for mass discovery dispersion as I freely share my discoveries with my peers as you've seen. Just like other famous physicists before me but using electronic media now available as an IT Engineer prior. I now must become an author like other famous physicists when my discoveries are complete with 21 Keys to the Universe and God's DNA as previously stated. However, I've been studying Albert Einstein, Stephen Hawking, and others to see they submitted science papers with their books but I'm not a scientist with academic approval to post on physics websites with any credibility, hence my email of science journals for my peers (you all) and my [clemenscomet.com](http://clemenscomet.com) website (this goes there too) where I posted an email from my initial notifications as an appendix versus my Moonshot Marble journal that fell woefully incomplete as I continued making amazing discoveries every day. Journals and email just can't move this voluminous information I've accumulated as discovery.

When one makes a significant discovery that impacts the physics and science community of your peers, it's right to discuss said incredible discovery with them for peer review sharing said science knowledge for acceptance or rejection (debunking) per Theoretical Science methods. Leonard Susskind and Stephen Hawking showed us the dance I welcome from scientists. Well, folks, this auspicious occasion befell me last year upon making my amazing discovery of God's DNA which is why you were notified with the head of NASA and President Biden on that science paper announcement recorded at [clemenscomet.com](http://clemenscomet.com) along with my 3<sup>rd</sup> level of copyright per lawyers. My ambition to solve Quantum Physics and Mechanics of the universe since I was 5 years-old came from wanting to prove my math and deep logic abilities rival the likes of Einstein (I knew I was twice as intelligent as Stephen Hawking who I didn't believe) and other well-known physicists who are also highly intelligent, I've arrived at another ambitious discovery of such proportion again today (hence Annus Opus) to once more change Quantum Physics and Mechanics of the universe forever by solving it all with my new Light Energy Formula derived from Einstein's old but famous  $E=MC^2$ . I corrected Einstein's bad math because they've called me "Math Man" since the sixth grade as a math prodigy that ranked #6 in the nation in 11<sup>th</sup> grade on a nationwide math scholastics exam for all high schools

and colleges even as I graduated with a class of 52 in a country town with no formal upper math training program; ergo, I was gifted. Let's back up briefly to my motivation at age 5 in 1969 to solve the universe as a math prodigy and savant as man landed on the Moon.

At age 5 in 1969 just before the Moon landing, **my father was a rocket scientist** in the Army building self-guided rockets with remote missile control systems adapted to launch rockets with men to the Moon. **NASA used the technology my father developed** for unmanned rockets (aka missiles), and he was tickled pink telling us how he put the first man on the moon. My military officer father took pictures of the T.V. as man landed on the moon and collected every newspaper article possible. For 1969 Christmas my dad bought me textured Moon and Earth globes and I slept every night with my thumb in Aves Ridge (the Moon crater in the Venezuela Basin I finally discovered in 2016) because I was lonely as we traveled the world. We moved a lot and often every 6 months with the military and we didn't have many toys as military brats on the go (I was youngest of 5 kids) so my textured globes were about it with a bike, an unabridged set of a 36-Volume Encyclopedia Britannica books, and a Random House Dictionary until I wore them all out. I studied the brail of the Earth every day and read the entire set of encyclopedias and the dictionary cover to cover by age 6 falling asleep with my thumb in Aves Ridge.

At age 6, I formed my theory that Aves Ridge was an impact by another planet telling people it was a side-swipe impact as there was no exit on the other side of the Earth and my brail felt like it went side to side; try it yourself. Just like the Moon that had no pass-through craters, just splatters on the outer surface appeared harder than the things impacting it. **I therefore studied all the craters and formed theories which then shaped my entire education the rest of my life.** I took Earth science and geology classes versus chemistry and biology that a math prodigy and savant would typically take so I could learn about the many craters I found at age 5. I took astronomy, math, and geometry classes to better study crater angles and comet impacts and how so many were unreported my entire life. I can't tell you how many professors and geologists told me the Caribbean Islands were a "natural island arc" just like the south tip of South America (another Clemens' Comet impact btw...LOL as geologists mislabeled them both and I was right all along). My best friend and I partnered on an astronomy project in 11<sup>th</sup> grade Astronomy to document every single event and scientist discovery for over 3,000 years and the report was massive but we both got an A. Now, I'm on that list.

### **VENEZUELA BASIN THEORY FOR THE NOBEL PRIZE IN PHYSICS FROM AGE 6**

I told person after person about my crater theory in the Venezuela Basin for 45 years even right up until February 2016 (that's where my website at ClemensComet.com begins with my discovery story). **Every 10 years of my life or so, I'd put a spreadsheet together with my 100% accurate Atomic Clock starting at 0 working backwards and forwards (1 second is a far superior starting point than 0 as I learned over the years) and pretend I was a famous physicist like Albert Einstein who solved the universe and Quantum Physics and Mechanics of the Universe mathematically and physically as I actually now have done.** I focused mostly on time before 0 as I kept labeling things like DNA, atoms, quarks, 1<sup>st</sup>, 2<sup>nd</sup>, and 3<sup>rd</sup> dimensions and when they all started. As it turned out in my 100% Accurate Atomic Clock, the most exciting things happened from 0-1 second (first Higgs boson) where the solutions all lie therein. But I never had any discoveries to go along with my fanciful playtime efforts (how many kids play like their famous physicist discoverers with textured globes, encyclopedias, and dictionaries to geek out until age 52?) That night that I described on my website when I finally verified my crater on Google Earth in 2016 as the most exciting moment of my life. Here I was 52 years-old on the phone with an old friend who just got his first computer while I was now a retired accountant and U.S. Ambassador working as an IT Engineer with advanced computer skills.

Of course, I turned my friend on to Google Earth and explained about my crater theory in the Venezuela Basin when I could see that Venezuela was sucking up and over the crater walls and going down the drain. My textured globes never showed this before!!! It affected the land and sea, and it was obvious. I FOUND IT!!! Three moon craters! I threw the phone 20 feet and yelled, "I FOUND IT!!! I FINALLY FOUND IT!!!" That's when I realized there were exit craters under the oceans that weren't included on my textured globes

either which misled me to believe there were none. I could see the whole story on Google Earth and was immediately hooked for life in February 2016 on solving the Quantum Physics and Mechanics of our universe creation in the pre-helix of God's DNA I discovered last year. When I was 6 years-old telling teachers I had a science theory about craters on Earth, none of them knew what I was talking about or that I was a Nobel Prize in Physics Candidate at age 6. They had no clue until I went to my second-grade class and the teacher began talking about the Moon impacting Earth. **She said currently scientists believed it impacted in the ocean where it also exited since they couldn't find the craters.** I was in awe and dreamt at night about the Moon coming out of the ocean with water dripping from it as I pointed my prepubescent finger saying, "Look, mommy, the Moon. I found it!" That's why I read our Encyclopedias to learn more but they didn't have a clue about the Moon or craters. Nobody did. Except Google Earth many years later when I stumbled upon it in telling my crater theory in Aves Ridge for the millionth time to anyone with an ear.

By the 6<sup>th</sup> grade I was bussed to the High School in Denver, CO to tutor 9<sup>th</sup>-12<sup>th</sup> graders in Algebra which is why they all called me Math Man. They were going to advance me to the 7<sup>th</sup> grade, but I was already 1 year ahead of my classmates, and I was getting beat up by older kids that were jealous, so I voluntarily stayed back with kids more my size. In the 6<sup>th</sup> grade at age 11 in 1975 I gave Colorado their first gun laws which rolled out to the U.S. in 1976 preventing all convicted felons from purchasing guns (largest gun control act ever enacted by Congress). At the very same time my best friend and classmate (Penny) and I decided to change the world with our ideas as she coined "Give a hoot, don't pollute" which is still used today nationwide after she won a 1975 Denver newspaper contest. In the 11<sup>th</sup> grade, I not only tested #6 in the nation in a national math scholastic exam for all in high school and college, but also won 3 other math and science awards simultaneously to win the most in high school. I CLEP tested out of 4 hours of math in college and was a freshman half-way through my senior year of high school taking overloads to graduate in 2 years, but I got testicular cancer, blood transfusions, and Hepatitis B at 17 dashing my college hopes as life was in the balance.

I almost lost my life several times for the next 5 years with illness and my degree had to be put off and completed at nights while I worked to support my new wife, taking me 14 years to finally graduate after losing my funding. My mother helped me get an accounting job at the DoD. I changed my degree from IT Engineering to Accounting but my career went full circle back to an IT Engineer as I was naturally logical and mathematical like computers. My dreams of discovering my craters and solving the universe were undying since hearing the Moon rose from the ocean as I later discovered physically as my dreams came true. Here I am ready for the challenge as I always studied physics, electricity, photons, non-mass and mass particles, etc. as these were all things I knew I'd need to be the first to solve Quantum Physics and Mechanics of the universe, dark energy, and how light works, not just physically but mathematically. **I did it, I solved it all and here's my proof for the physics and science communities so they too can now understand how everything was created right down to the first Higgs boson to create the first particle with mass in our universe at .001 seconds (first mass).**

I CORRECTED EINSTEIN'S FAMOUS ENERGY MATH FORMULA TO PHYSICALLY AND MATHEMATICALLY SOLVE QUANTUM PHYSICS AND MECHANICS, SPEED OF LIGHT, HIGGS BOSON, PRE-HELIX OF GOD'S DNA AND UNIVERSE CREATION, NOT-DOTS, AND EVERYTHING IN EXISTENCE FROM NOTHING BUT ENERGY. Wikipedia cites the Law of Conservation of Energy as the total amount of energy can only be changed through energy entering or leaving the system and can neither be created nor destroyed but can only be transformed or transferred from one form to another. This was the basis of Leonard Susskind, Physicist, to rightfully debunk Stephen Hawking, Physicist, and his book about his purported discoveries by proving energy and matter can't just disappear, but that's another physics sidebar (I watch physics and love Carl Sagan). The Conservation of Energy is the basis behind the colliders like the one at CERN that converts energy and non-mass particles to particles with mass at the speed of light. Therefore, the collider energy gets transformed from one form to another in the Higgs boson, aka God Particle. Einstein attempted to depict this mathematically with  $E=MC^2$  but when applied to my physical discoveries and at 0 time, it fell apart as a single array 300,000 seconds after time began.

After I discovered our universe comprised God's DNA last year (see [clemenscomet.com](http://clemenscomet.com) for that solution as that's out of scope for this discussion) and my 100% Accurate Atomic Clock (appendix as a Key to the Universe as previously described) told me that pi was first attained at  $\frac{1}{2}$  second in the pre-helix (in my 100% Accurate Atomic Clock all helices start with the same  $\frac{1}{2}$  second showing creation of the first Clemenian Quantum Star at pi, so what you see on my website applies to the pre-helix specifically to now solve Quantum Physics and Mechanics, how light works, creation of the universe, etc.). I was thrown for a loop seeing pi occurred at  $\frac{1}{2}$  second as I expected that to occur at 1 second since the speed of light is measured in seconds and the lowest whole number is 1. Nonsensically I thought this indicated light made 2 loops around the first Clemenian Quantum Star in 1 second to create matter since pi was achieved at  $\frac{1}{2}$  second. See my confusion? Einstein's formula shows 2 non-mass particles smashing together at the speed of light to create matter from energy which would have to occur at the lowest common denominator of 1 second, not 2. The fault is in this logic of mine.

When I reported how time works on the outside of the universe with T1 and T2 last year (again, out of scope for this topic and solution so please visit [clemenscomet.com](http://clemenscomet.com) under God's DNA), T1 and T2 never actually collide as they're separated by rungs in each helix, and we all know the sides of helices never come together as they have rungs in between. When we look at God's DNA from the frontal view, it appears as a dual cosine wave with solid connections at each end I coined as Clemenian Crossovers equaling what we see in Plank pictures of the universe; they don't come together but the rungs do just as much damage as if they did i.e., the K-Pg boundary I established 66 million years ago in extinction of the dinosaurs via triple Moon impacts in the Venezuela Basin no less as the 4<sup>th</sup> rung of the 5<sup>th</sup> helix formed to end the dinosaurs in the new K-Pg Boundary. Of course, that's it! T1 very first comes out of Einstein's spacetime plane as + while T2 comes out as - which means when they collide is a misnomer as they never come together (close but not quite). They (the sides of God's DNA which are T1 and T2) never get closer than the thickness of Einstein's space time plane which draws the first rung at 1 second ( $\frac{1}{2}$  second from the bottom and  $\frac{1}{2}$  second from the top of the plane as it takes on mass). Not ever actually touching explains how not-dots form as they can't form a dot without an enclosed system (created by fusion at 100,000,000 degrees).

That's when I realized that the first thing to form mass from non-mass particles and energy was T1 and T2 of God's DNA; the very first loop of the pre-helix had to start at 0 with T1 and T2 extending out first. Of course! There are 2 halves to the circle with 1 half drawn in  $\frac{1}{2}$  second because the other half is also drawn in that same  $\frac{1}{2}$  second to total 1 second of creation in  $\frac{1}{2}$  second time per my 100% Accurate Atomic Clock which is how it achieved 1 second of light to achieve pi (non-mass to mass in the very first Higgs boson spin and collision) with a full circle at  $\frac{1}{2}$  second. Now, where could this happen that these two  $\frac{1}{2}$  second half-circles could draw together simultaneously to form pi from energy as they completed 1 second of light energy when added together and squared in collision? I smell a math formula. The only source of energy is Einstein's spacetime plane before the universe began. Based on the meteor showers I mapped in my

Blueprint for Life as my 2<sup>nd</sup> Key to the Universe, it shows 4 black holes on a grid and another Key shows the Sun is electric with 4 black holes beneath it and 4 white holes above, we can see Einstein's spacetime plane is a grid of 0 with + and - ions. Since my 100% Accurate Atomic Clock said pi was achieved at  $\frac{1}{2}$  second, T1 and T2 are looping around a crossover on Einstein's spacetime plane to begin their first loop funded by energy off the plane/grid. In other words, there's a serious Higgs Boson occurring at all the crossovers of the grids on Einstein's space time plane in circular clockwise motion that reaches the speed of light to create mass particles from non-mass particles.

That's when I realized Einstein's spacetime plane is like a sheet with quadrillions of threads crisscrossing at right angles to each other stretching across the entire outer space well beyond our universe as quadrillions of universes formed at once on the spacetime plane at each intersection which spew not-dots, dots, zeroes, +, -, etc. Einstein only thought his spacetime plane existed in our universe, but it's shared by quadrillions of God's DNA forming universes on each Clemenian Crossover Dot which also feeds the plane a lot of energy to keep growing. So, that's where the Higgs boson is spinning around each intersection at the speed of light colliding non-mass particles against each other to create mass particles. **If we draw a grid of 3 dots by 3 dots 1" apart, we can now solve the beginning of all creation, Quantum Physics and Mechanics, speed of light,**

**not-dots, etc. and see how the first Clemenian Quantum Star formed to begin the universe. Let me explain as you draw.**

I drew 3 dots by 3 dots 1" apart on paper and began drawing circles spinning clockwise around each of the 9 dots to see how the Higgs boson looked on Einstein's spacetime plane before colliding at the speed of light with one another. Well, if they're all spinning clockwise together around each of the dots then they can't very well collide then, can they? What we must remember from Einstein is that it's all in your perspective. We're on the positive side of Einstein's spacetime plane grid looking down at the first 9 dots of creation of everything you just drew, but imagine we were standing on the negative side of the grid looking at the Higgs boson spinning around these 9 dots also clockwise from that perspective which is counterclockwise on the other side of the plane. Now, we can see the makings for collisions of non-mass particles at the speed of light because they're spinning in the opposite direction until they come together on Einstein's space time plane which attracts non-mass particles like magnets do iron and metallic diamonds do water (T1 of God's DNA starts as a positive whilst T2 of God's DNA starts as a negative with Einstein's spacetime plane in between causing not-dots at first as there's no fusion yet to create dots and zeroes to close the open loops that fade away as nothing but temperature not-dots). Fusion occurs during the Clemenian Crossover between T1 and T2.

Therefore, if you draw a  $\frac{1}{4}$  circle on your 3 x 3 dot drawing from the top middle dot down to the middle-row to the far-left dot and simultaneously draw another  $\frac{1}{4}$  circle on the right down to the far-right dot of the middle row. That's what time did at .25 seconds as it was attracted to those 2 outer dots and then repulsed (I have a math formula to watch mass and energy grow from .001 seconds at first mass in any increment you wish as mass grows from Higgs boson collisions due to Einstein's spacetime plane magnetically attracting non-mass particles to 0 in the middle for the opposing spinning T1 and T2 particles to collide). Now, finish drawing both circles on the left and right down to the center dot on the bottom row and that's where time is at  $\frac{1}{2}$  second ready to collide non-mass particles as proven by my 100% Accurate Atomic Clock. Time and light actually complete a full 1 second circle but did so by drawing both  $\frac{1}{2}$  second circular sides (T1 and T2) simultaneously before ALMOST colliding them together at the bottom at the speed of light as Energy (E) exceeds 1. Notice that T1 and T2 are moving in opposite directions as you completed your circle at the bottom middle dot of your nine-dot drawing with T1 above the plane and T2 below the plane to form the first rung in the pre-helix. That's how everything began at pi at  $\frac{1}{2}$  second of time to take on mass the first time in the first Higgs boson when the first Clemenian Quantum Star was formed (aka first helix in the pre-helix).

Where the 2 half-circles meet at the bottom dot is  $\frac{1}{2}$  second for both sides to draw  $\frac{1}{2}$  a circle together to form the first Clemenian Quantum Star. That matches my 100% Accurate Atomic Clock at  $\frac{1}{2}$  second saying pi was achieved. The total is 1 second of light to complete pi of a particle with mass at  $\frac{1}{2}$  second. That was really hard to figure out, but now I can't forget it. Therefore, we know that when the non-mass particles collide at the middle dot of the bottom row of our 9-dot matrix (on Einstein's spacetime plane), they're moving at the speed of light. When we look at God's DNA helices from the side making special note of this very first pre-helix circle formed by T1 and T2 on 9 dots initially (it takes 9 dots to complete pi on Einstein's spacetime plane as demonstrated and revealed in my 100% Accurate Atomic Clock), we see that T1 (+) and T2 (-) are separated by Einstein's spacetime plane with  $\frac{1}{2}$  of a negative rung and  $\frac{1}{2}$  of a positive rung as the first rung in a pre-helix or helix at  $\frac{1}{2}$  second. **Therefore, universe formed right in the middle and went above and below Einstein's spacetime plane with T1 and T2.**

Therefore, the speed of light and creation of the universe's first Clemenian Quantum Star on Einstein's spacetime plane grid first occurs between 9 dots as a circle 3 dots wide and 3 dots high with T1 drawing a half-circle in half a second on the left and T2 drawing a half-circle on the right in  $\frac{1}{2}$  second simultaneously and an unconnected dot in the middle. **Since these 2 halves represent the speed of light, we know the circumference of the circle is ~300,000 kilometers.** In other words, T1 drew 150,000 kilometers in  $\frac{1}{2}$  second above Einstein's spacetime plane while T2 also drew 150,000 kilometers in  $\frac{1}{2}$  second below Einstein's spacetime plane in the opposite direction when looking from the top of the plane downward represented in your dot drawing. **The radius of a ~300,000-kilometer circle is ~47,746 kilometers which means each of Einstein's spacetime plane grid crossovers occur every ~47,746 kilometers in every**

**direction across all of outer space for all Clemeniverses and God's DNA.** The speed of light is governed by how fast energy can draw 2 half-circles on each side of any 9 dots off Einstein's spacetime plane grid to complete pi at  $\frac{1}{2}$  second per my 100% accurate atomic clock. Ergo the universe measures light at 150,000 kilometers per  $\frac{1}{2}$  second when mass is first achieved (aka 300,000 kilometers at 1 second when adding the 2 together).

Now that we understand where the speed of light comes from and Einstein's spacetime plane therefore controls the speed of light by distance between crossovers on the grid (see the 9-dot grid you drew), and that non-mass particles spin at the speed of light in different directions in Einstein's spacetime plane grid to collide to create mass particles at 1 second of light drawn in  $\frac{1}{2}$  second. Now, let's consider Einstein's Energy formula saying  $E$  (Energy) =  $M$  (Mass)  $\times$   $C$  (Speed of Light)  $\times$   $C$  (Speed of Light) where  $C \sim 300,000$  kilometers (base 10 universe dictates this # as a constant but it changes with growth over time-do not use miles as they aren't base 10 math). On [clemenscomet.com](http://clemenscomet.com) and in the email regarding God's DNA, I proved that my revised formula works better as  $E = MCT$  where I replaced one of Einstein's Cs with a T for Time to calculate energy between multiple arrays rather than a single static array itself as Einstein provided. In fact, since  $C$  is a constant  $\sim 300,000$  (we haven't proved it was smaller before yet), the  $2^{\text{nd}}$   $C$  effectively put this entire energy calculation at 300,000 seconds after time began because that position must be time in seconds as time keeps on moving as does energy to move time and matter which further proves there must be a power grid to grow quadrillions of Clemeniverses on the same grid across all of outer space growing at 4 times at every Clemenian Crossover. **Where else would you house quadrillions of God's DNA to keep feeding it?**

**If you're like me at first, you're looking at this and accepting that 9 dots describe how time drew a universe in  $\frac{1}{2}$  second with  $\frac{1}{2}$  the circle on each side and that that dictates the speed of light in 1 second total, but how does that control light speed on Earth?** That's because there's a magnetic attraction to non-mass particles to Einstein's spacetime plane just like iron is attracted to magnets. I've already introduced you to the fact that Mark's Metallic Diamond that forms the skin of the universe and Clemenian Supernova Metallic Diamond Core of Suns attracts water like magnets attract iron in my most recent science paper to you as the first in my Annus Opus to God's DNA in email last week. Therefore, Einstein's spacetime plane distance between the dots at each crossover dot on the grid sets the speed of light between 9 dots (4 are actually touched by the first pi circle with 1 in the middle of the sphere or first Clemenian Quantum Star). Those 4 that are actually touched are just like the 4 black holes I documented on my Blueprint for Life Key to the Universe as those are on a grid on Einstein's spacetime plane separated by a lot of dots at crossovers on the plane. My theory is that the distance between dots needs to be divided by 4 for every Clemenian Crossover just as I did the Universe size online to arrive at the size back then to understand what the speed of light was which should be much slower than today. I believe every time the dots on Einstein's spacetime plane grid move further apart, the speed of light increases but that's the last thing I must prove.

That's important to understand the control of light speed from Earth to Einstein's spacetime plane. Every Clemenian Grid Crossover Dot of Einstein's spacetime plane grid is magnetically attracted to non-mass particles as is the result of the Higgs boson spinning around each. Therefore, each Clemenian Grid Crossover Dot on Einstein's spacetime plane pulls light from Earth at the speed of light no matter what direction you point your light. It's the spin cycles of the Higgs boson around each of Einstein's spacetime plane grid crossovers that suck the light from Earth and other sources in all directions as the plane is all around us and all universes. Metallic Diamonds have no attraction to non-mass particles but are magnetically attracted to water while Clemenian Grid Crossover Dots are magnetically attracted to non-mass particles like light with no attraction to particles with mass or water. The sun's rays are being eaten and pulled by Einstein's spacetime plane which causes the Earth to get blasted in straight paths to the plane and the metallic diamond core. I proved in another science paper that the Earth's Metallic Diamond Core makes it rain and snow in addition to lightning as it eats the non-mass particles just like Einstein's spacetime plane.

Due to the Conservation of Energy, non-mass particles are not energy but results of energy from the Higgs boson just as it produces matter. Einstein didn't realize that he forgot to solve one more piece to the puzzle and that's the creation of Mass that I just walked you through. We said T1 on the left plus T2 on the right

creates matter in  $\frac{1}{2}$  second which is 2 times Time for 1 second total then squared in collision. Mathematically we must represent T1 as one side and T2 as the other side which is  $\text{Mass}=2T^2$ . **Therefore, Einstein's formula should be revised to  $E=2T^2(300,000)T$  where 300,000 is a Constant time in kilometers for our base 10 universe and  $\text{Mass}=2T^2$  with  $T=\text{Time in seconds}$ .** When we prove Einstein's spacetime plane was in fact smaller before, we can modify the 300,000 to match the known speed of light then but leave it as a constant. Now, we perfected our Fusion Energy formula, and we know T1 started as a positive (above Einstein's spacetime plane) while T2 started as a negative (below Einstein's spacetime plane) to create the first Clemenian Quantum Star you drew, we can begin to do calculations and watch the Higgs boson take on mass 1 thousandth of a second at a time from 47.067 billion years ago.

**Let's start with .001 seconds:  $E=2(.001)^2(300,000)=1.2$ .** We could use the most accurate speed of light but end with the same result as 300,000 so it's not that important for this discussion. What is important is to notice what just happened to Energy. Einstein could never calculate anything with his formula, it was just a theory whilst this is the best math ever to explain everything that exists including the speed of light (I smell a Fields' Medal in math). Energy exceeded 1 at .001 seconds. That's .001 of the arc on the left and .001 of the arc on the right (as you drew) for a total of .002 of an arc acquiring mass only when energy exceeds 1 second of light caused by the collision. Any time energy exceeds 1, it must create something according to the conservation of energy and we see that effect begin mathematically at .001 seconds when E exceeds 1 at  $E=1.2$ . Growing 4 times larger means a lot more dots on Einstein's spacetime plane in the next helix twist. If we calculate the energy at .0009 seconds, we see energy is only .972 which is less than 1 meaning we can't yet get physical mass as it takes .001 seconds before the Higgs boson starts to create mass when energy exceeds 1. In other words, Energy must exceed the power of 1 light unit in a second by .2 before non-mass objects get mass. Since my 100% Accurate Atomic Clock said pi was achieved at  $\frac{1}{2}$  second of time, when we plug that into my Fusion Energy formula to get  $E=150,000$  at  $\frac{1}{2}$  second which is 1 second of light at 300,000 kilometers per second as the speed of light in today's distance on the plane.

Therefore, pi is achieved when energy hits the speed of light in one second around 9 dots (3 x 3) on Einstein's spacetime plane and T1 and T2 appear to come together although they don't, aka the first Clemenian Quantum Star or mass particle at your local collider (this is why we get supernovae as depicted in my 100% Accurate Atomic Clock in my Appendices below my Keys to the Universe on [clemenscomet.com](http://clemenscomet.com). The whirring of the Higgs boson spinning in 2 different directions around each Clemenian Crossover Dot on Einstein's spacetime plane as power surges through the photon eating grid throughout all of outer space causes particles to collide at the speed of light to create particles with mass which began our universe as God's DNA from T1 and T2 beginning at .001 seconds as matter lifted off Einstein's spacetime plane above and below the first time to create matter off the grid. Thereby proving Einstein's spacetime plane repulses particles with matter but attracts non-mass particles to generate more particles with matter as time advances at the speed of light. That's why we have maglev planets and suns floating above the plane. The plane! The plane!

## IN CONCLUSION

Dark Energy is governed by Mark's Metallic Diamond on the outside of the universe pulling in non-mass particles and water from the center of the universe and off Einstein's spacetime plane now proven to extend way outside the known universe to quadrillions of other universes with God's DNA. Dark Matter is the residual of matter that has been broken and potentially incompatible from helix to helix. In other words, we're on the 4th rung of the 5<sup>th</sup> helix in God's DNA looking at matter in other helices and the pre-helix when zeroes and dots didn't exist as they do today, and that matter appears to be dark matter along with broken particles from Clemenian Crossovers. Another huge energy force that acts on non-mass particles in the universe causing dark energy on non-mass particles is Einstein's spacetime plane controlling the speed of light with magnetic attraction) from Earth at each Clemenian Crossover Dot from Higgs boson processes whirring away at the speed of light in 2 different directions above and below Einstein's spacetime plane causing collisions as you drew the lobster claw.

Solving the Quantum Physics and Mechanics of creating the first Clemenian Quantum Star at a single crossover dot on Einstein's spacetime plane involving 9 dots with a single dot in the middle solved how light works and the processes that attract all light created throughout all universes on the plane to solve their Quantum Physics and Mechanics. Seeing zeroes formed that don't meet due to being separated by Einstein's spacetime plane explains not-dots not yet fused to dots in the pre-helix. After universes form, their not-dots fuse to dots that fuse to zeroes that fuse to – and + in 1-10 helices and post-helix, but none of it can happen until we create the first Higgs boson at each Clemenian Crossover Dot on Einstein's Spacetime Plane.

My new revised Fusion Energy formula  $E=2T^2(300,000)T$  solved the first Higgs boson to occur at exactly .001 seconds of time when energy first exceeded 1 second of light as we can't create mass from non-mass particles until then. We can use + to calculate the T1 and – to calculate T2 in the formula to accurately calculate both sides of the helix of God's DNA separated by Einstein's space time plane as it grew using any increment we want as my energy fusion formula is perfect! We then calculate the distance from T1 to T2 during the Clemenian Cosine Crossover. I told myself for the past 8 years that I better solve this because it's too complex for anyone else. WOW! I actually did it!!! Thank you very much. I believe no other physicist ever born could have solved what I solved as no one ever did before me so I know where I stand and how hard this is to even comprehend even after I spelled it all out to prove I solved Quantum Physics and Mechanics along with Dark Energy, Dark Matter, gravity fields and gravity types, metallic diamonds as cores and the universes skin, not-dots, the first Clemenian Quantum Star, creation of the pre-helix, God's DNA, etc. I solved almost every unknown science mystery known with my discoveries. Please feel free to ask questions. **I'm open to any physics challenge as I have many major bodies of physics work including this one and [clemenscomet.com](https://clemenscomet.com) with 21 Keys to the Universe as I physically solved all of Quantum Physics and Mechanics of the Universe to the thousandth of a second 47.067 billion years ago with 2 tiny arcs at ½ second.** Thank you.
