I based Clemenian Math on math graphs to solve time and universe's DNA in my 100% accurate atomic clock. See Code of Life for time's DNA impact on life and evolution.

CLICK IMAGE TO SEE "NOT DOTS" POPPING ON GRID: The only thing that existed in space were temperature "not dots" and pressure from volume 44.567 billion years ago.

Clemenian Math is the Reverse of Classical Math We All Learned in School

WATCHING "NOT DOTS" IS LIKE WATCHING A GLASS OF CHAMPAGNE. Mark Clemens

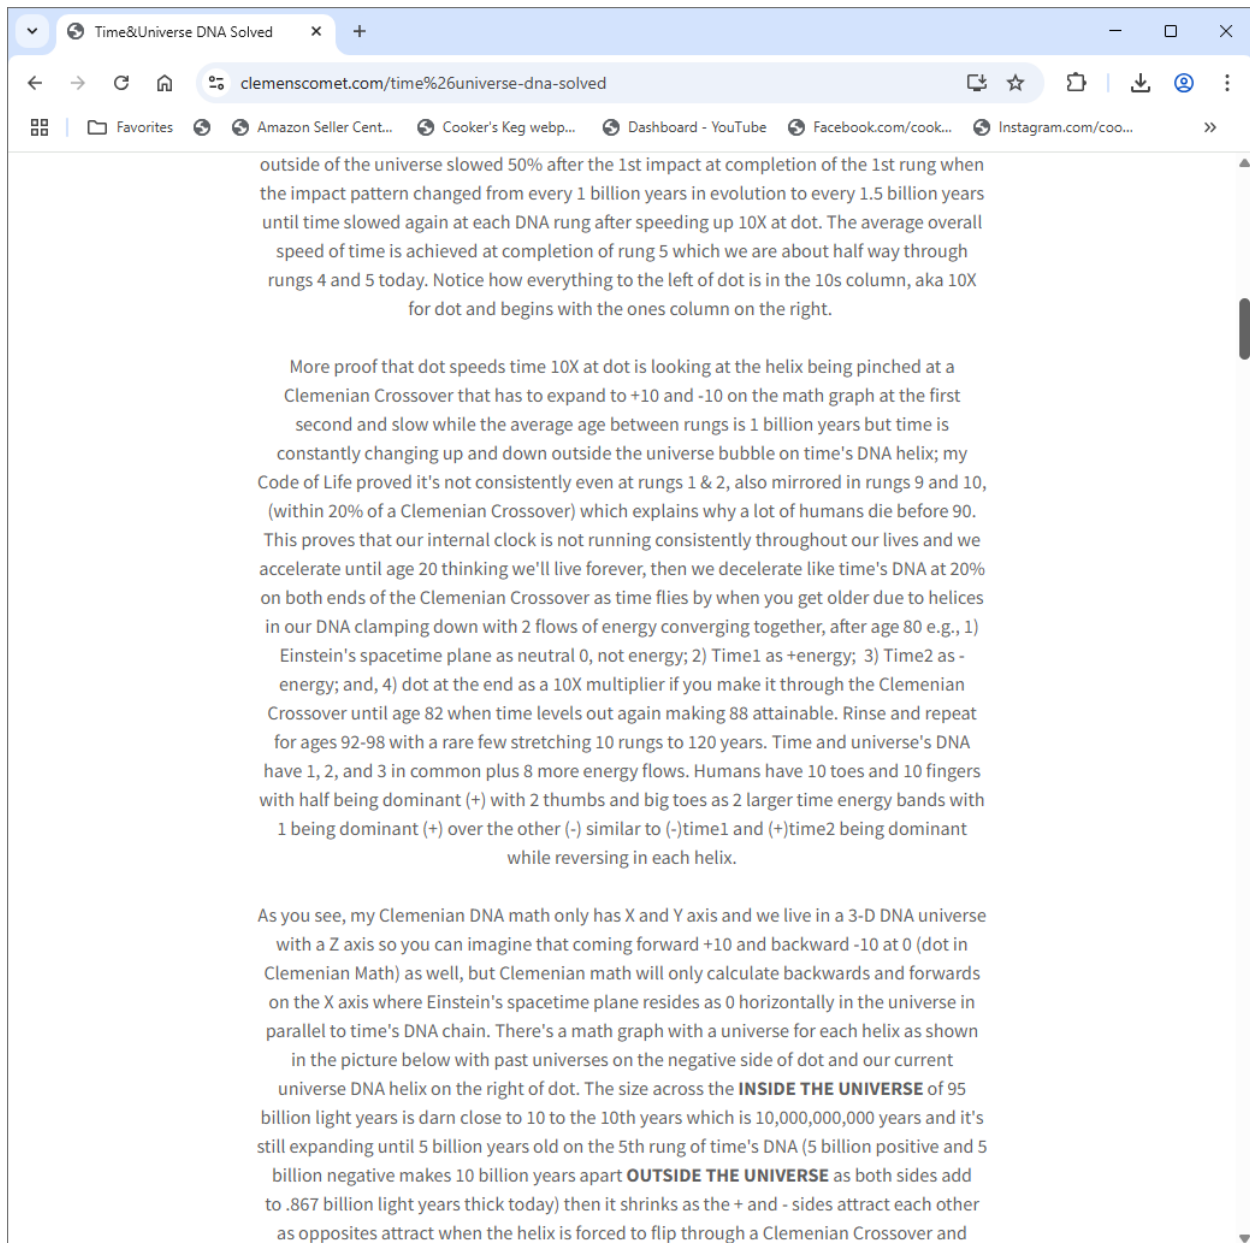

COPYRIGHT CHAIN OF CUSTODY WITH DNA UPDATES JULY 31, 2023:

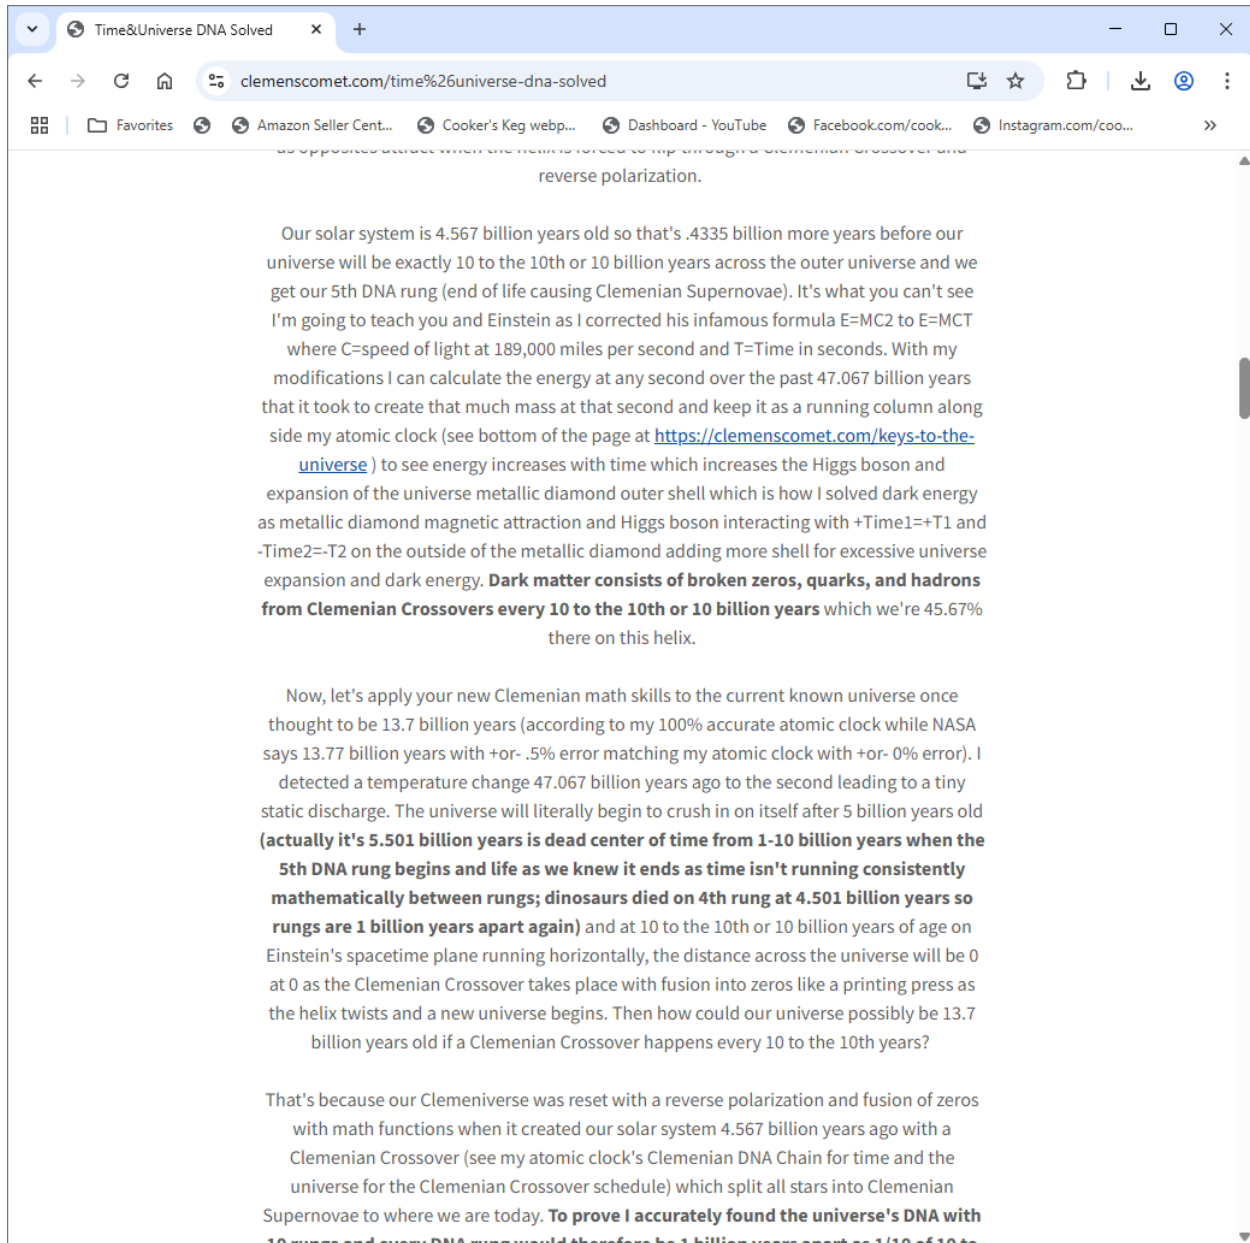

https://img1.wsimg.com/blobby/go/4630a99d-972c-45c4-a561-29df1625aa65/downloads/redacted_copyright.pdf?ver=1692655961863

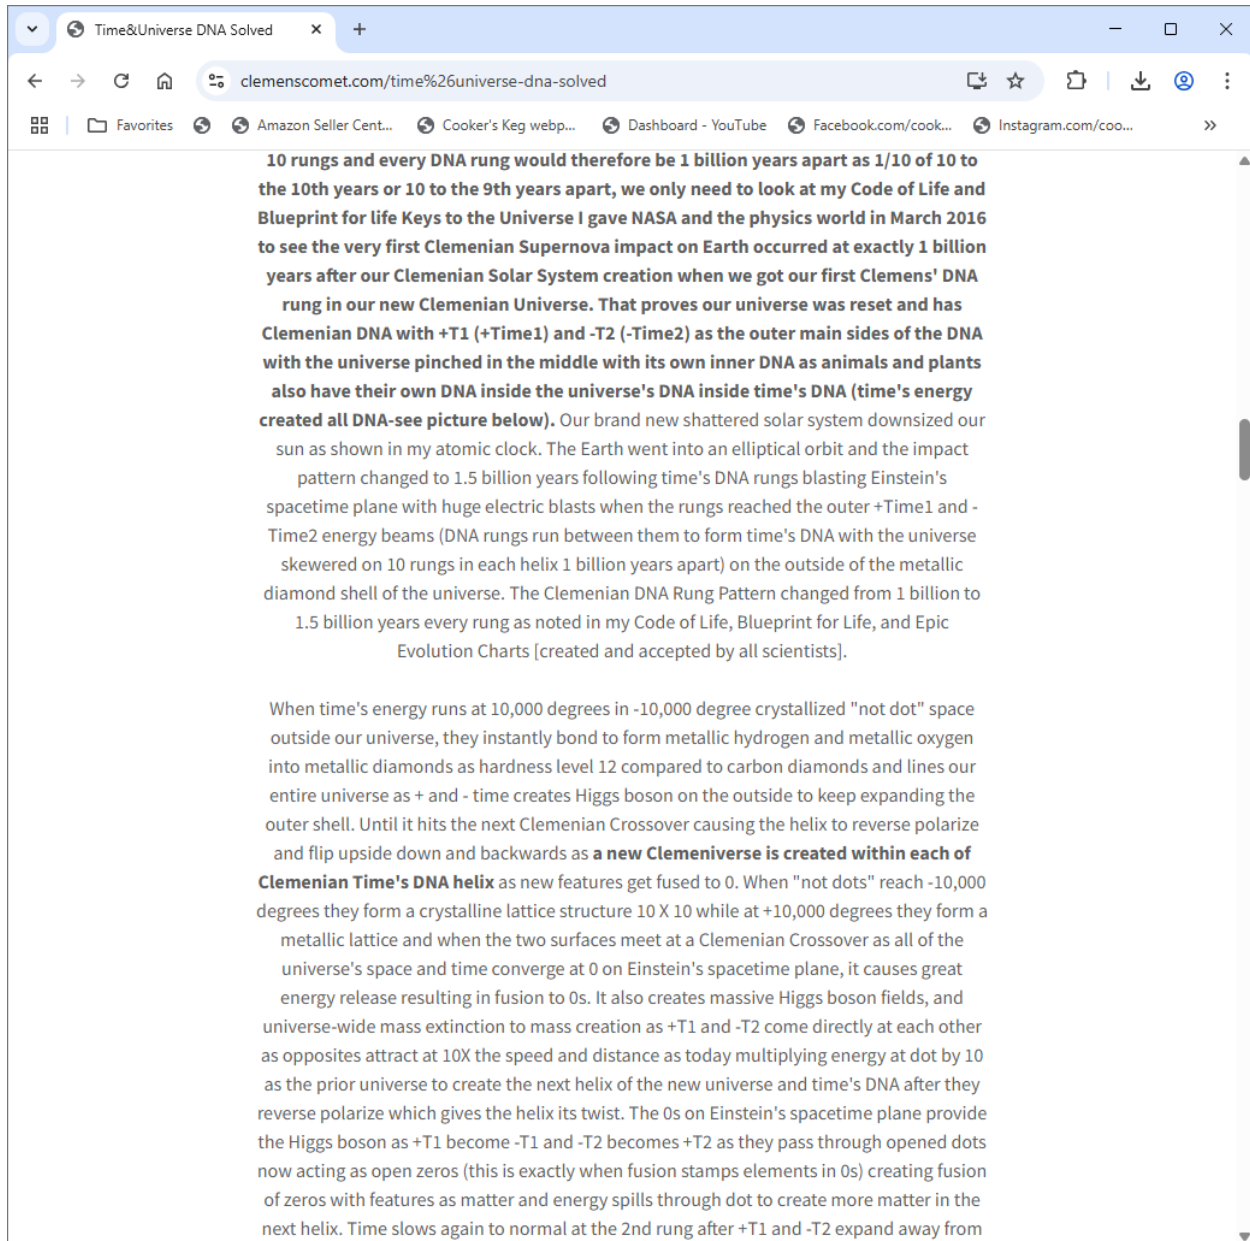

First, you'll hear a lot about my 100% accurate Atomic Clock so I wanted you to know first how I created it in 1 minute and worked on it another 7 years (I've created this clock 10 times since I was 10 always knowing I'd solve the beginning of the universe to the quantum physics level which is before time began and **it finally applied to something at age 51**). I read a lot about half-life for aging old stuff and decided to age the universe by splitting NASA's age in seconds in half all the way back to 1 second. It didn't line up so I adjusted it and rolled it both backwards and forwards from 1 second just as the Clemenian DNA did, so I know it's a perfect match of events rolling forward by the second. That's it! Then, I added things like Clemenian DNA Crossovers and DNA rungs, helices, Higgs boson growth processes, etc. to become a Key to the Universe. In the math we use every day, 1.2 days means 1 day and 4.8 hours but in Clemenian math the decimals and negatives go on the left side and positive whole numbers on the right in reverse order (reverse polarization) like the math graph above (my Clemenian Atomic Clock shows previous Clemeniverses as 1/4th current Clemeniverse size but you couldn't see it if it were 1/4th as big). When we analyze time's DNA, the first example is .999999999.0000000000. where each helix is between 2 dots and if we add 1 more second to the 9s we're at 0 time e.g., .0000000000.0000000000. which is a Clemenian Cosine Crossover [or Clemenian Crossover] at the middle dot as the new universe flips into the new helix as the first second looks like .0000000000.1000000000.

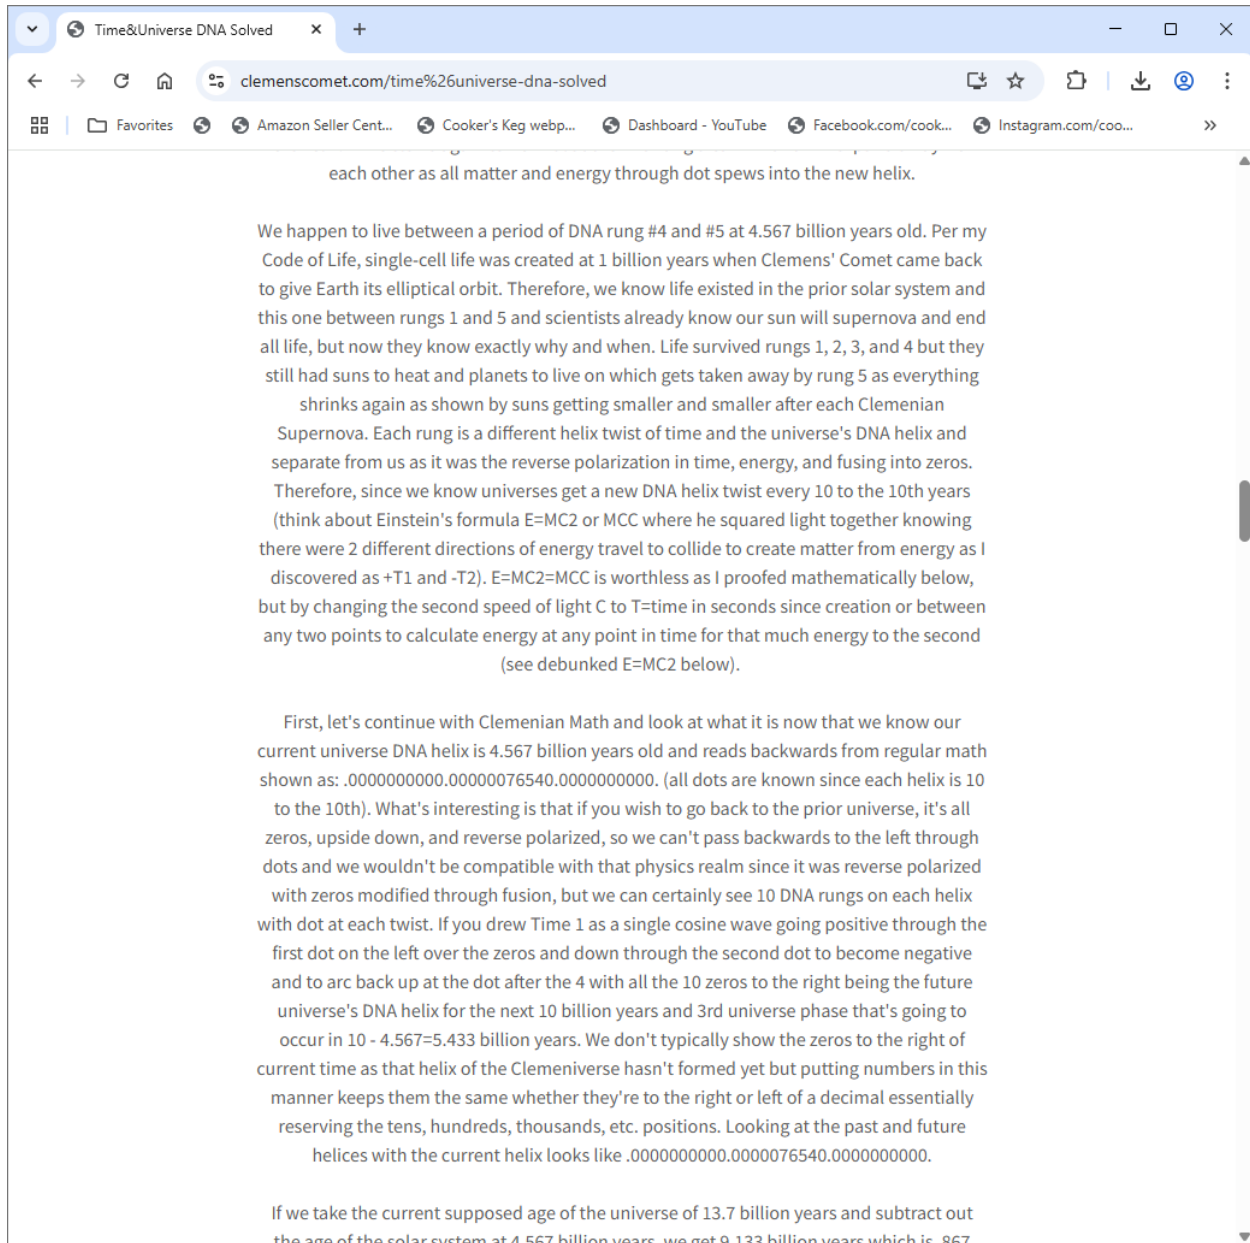

Based on my Code of Life impacts, after the Clemenian Crossover at dot, time on the outside of the universe slowed 50% after the 1st impact at completion of the 1st run when

4

Time&Universe DNA Solved

clemenscomet.com/time%26universe-dna-solved

universe (see Code of Life). Adding the prior universe to our current time is 9.133 billion years + 4.567 billion years = 13.7 billion years of positive universes after + fused to 0 at the Clemenian Crossover. 9.133 billion years plus universe thickness on the outside of the left and right of the universe = $9.133 + .4335 + .4335 = 10$ billion years from dot to dot. That means the metallic diamond on the outer universe is 433.5 million light years thick to outer space and expanding causing more dark energy and we only measure the visible universe so our calculated age inside the universe's metallic diamond is 13.7 billion years while total space time outside the universe is 14.567 billion years. If you're shooting a telescope down the helix to the beginning, you'd see 44.567 billion years back through zapped universes +2.5 billion years of "not dots" in the pre-helix for a total of 47.067 billion years viewable today; all universes get reverse polarized at the Clemenian Cosine Crossover. As Einstein said, it's all in your perspective.

CLEMENIAN DNA MATH WORKS WITH PEOPLE TOO (universes are 10 to the 10th whilst people are 10 to the 2nd both with DNA helices as .0000000000. for every 10 years of life while the universe is exactly the same for every 1 billion years of life): Who knew you could solve DNA in outer space 5 billion light years away? If I pretended I were in the prior universe, I could plug any numbers in to make it look like I was there at that time leaving current time for comparison (this is how we travel space and time in the past): .9999900000.00000076540. as rung #5 is about to short out Einstein's spacetime plane both positively and negatively to the outer universe and time's +T1 and -T2 energy paths to cause Clemenian Supernovae and become 10 to the 10th billion light years across at the helix/universe maximum width. If we go back before the creation of the negative symbol back to creating the zero at the first second leaving current time for comparison, it looks like this: .1000000000.0000000000.0000000000.0000076540. and we know the zero took 10 to the 10th or 10 billion years to create. I know + was created in the last helix/physics realm from 2 minuses fused together in the middle after minus was created in the prior helix/physics realm, which led to + being fused to zero in today's 5th helix/physics realm from start as the next logical fusing and the 6th will be +- fused to zero, 7th will fuse +++ to zero until the final 10th helix fuses +++++ in zero when it all ends...symbolic for 10 to the 10th in 10 helices. Total age at mathematical death is 10 to the 11th or 100 billion years in Clemenian Math as 0 can't hold 11...

BANG!!! IT'S THE FINAL CLEMENIAN CROSSOVER AT THE CLEMENIAN SUPERUNINOVA!!!

Human DNA ends the same way around age 100 with the **death signal as (++++-----) fused to zero X 10 (dot) at 10 to the 2nd**. It's quite obvious what came before zero as we stare at the first dot to the far left of the first zeros below, while we know dots are created by Clemenian Crossover. Therefore there had to be a crossover to zero dot for 10 billion

Time&Universe DNA Solved

clemenscomet.com/time%26universe-dna-solved

Clemenian Crossovers. Therefore, there had to be a crossover to create dot for 10 billion years which then looks like this with current time for comparison:
0000000000.0000000000.0000000000.0000076540. That's because we know that it took 10 to the 10th or 10 billion years to create 10 dots to the left of 0s created at the Clemenian Crossover. What comes before dot? "Not dot" of course. Do you see anything to the left of dot? It took 2.5 billion years to fuse "not dots" to dots and then into zeros at Clemenian Crossovers creating zero for the next helix shown as the first 10 zeros on the left above. We only see values in the first 3 dots to the left of the first 0 dividing backwards so there were 7.5 spots (10 to the 7) of "not dots" and 2.5 billion years before this to form the first dot totaling 10 to the 10th or 10 billion years. **Let's take my new revised Einstein formula for a spin as E=MCT for proof.**

The current suspected age of our current universe is 13,706,725,271.173 years and each helix is 10 to the 10th or 10 billion years for a total of 44.567 billion years for creation of dot, zero, minus, and plus in our system. **We take 44.567 billion divided by 189,000 (C=speed of light) miles per second = 235,804.233 divided by 365 days divided by 24 hours divided by 60 minutes divided by 60 seconds = .0075 or .0000000750.** (it's actually .00748 rounded to .0075 converted to .0000000750. = 7,500 below or above zero or +/-7,500 degrees in the pre-helix **AND OUTER SPACE WHICH IS -10,000 degrees and Time1 and Time2 are +10,000 degrees**) in Clemenian DNA Math (recall the first column to the left of dot is 10s). Therefore, we know "not dots" weren't detectable at -10,000 degrees until -7,500 when they became physical dots adding to dot (10 to the 7th "not dots" X 10 to the 7th "not dots" created dot and later fused it to 0 in Clemenian Crossover fusion). And when we look at my Atomic Clock at 0 seconds, the first visible particle occurs at .0625 seconds which is .000000062. in Clemenian Math and degrees +/- of zero in the pre-helix which shows "not dots" became visible dots after +/- .0000000750. degrees warming/cooling quickly to +/-630 degrees in the pre-helix. These temperature "not dots" made waves resulting in 2 time energy waves to create Time's DNA which is why we can see 47.067 billion years into the past with telescopes. **THAT'S COOL PROOF FROM A MATH PRODIGY!!!** In the pre-helix, temperature "not dots" are not detectable at -10,000: [7 columns of "not dots"]750.0000000000.0000000000.0000000000.0000076540. "Not dots" filled the first 7 columns including the column with 7 (.007 is 7 thousandths or -7,500 degrees as temperature "not dots" heated up to become dots before becoming hot "+not dots" cooling down to join cool and hip "-not dots." Zero was created by temperature "not dots" zeroing each other out when -10,000 degree "not dots" first attracted to opposite +10,000 degree temperature "not dots" **(per my 100% accurate atomic clock applicable to each helix twist) they stuck together for .0625 seconds [that's also +/-625 degrees in Clemenian Math when in the pre-helix as temperature "not dots" are all that existed just as in**

outer space outside the Clemeniverse today] creating the first magnetic force called Higgs Field to give non-mass particles mass as they repelled [pith ball experiment] with 10X energy per my atomic clock which works at each helix and pre-helix with "not dots." You see "not dots" created dot then created 0 but nothing was fused to zero until the Clemenian Crossover to become permanently recorded. When hot "not dots" met cold "not dots" created metallic hydrogen temporarily before minus was permanently fused to zero as the first negative energy element; then (+) was fused to zero as metallic oxygen was the first positive element before forming the metallic ocean and metallic diamond when they combined to form H2O before becoming the hardest substance in the universe powering suns).

The pre-helix formed from "not dots," first helix fused "not dots" to dots at -7,500 degrees (quickly cooling/warming to +or- 625 degrees before repulsion per my Atomic Clock and E=MCT. They repelled but were already fused at all 10X10 "not dots" as shown in my Atomic Clock and kept attracting back and then repelling until .5 seconds when they created the first sphere (see outer surface size in Atomic Clock) as the first Clemenian Quantum Star to become our universe post-pre-helix. **They then fused "not dots" as dots permanently at the 1st Clemenian Crossover, then the 2nd helix fused dot to temp zero, then the 3rd helix fused temp zero to zero, then the 4th helix fused flattened zeros as minuses from being exposed to -10,000 and +10,000 degrees actually looking like an array and fused - into zero recorded till the end of that helix at the Clemenian Crossover, and then the 5th helix fused minus signs together to become + at the Clemenian Crossover when +T1 and -T2 crossed 0 simultaneously at Einstein's spacetime plane fusing all to zero.**

When crossing 2 negatives and fusing them together as a plus makes those 2 negatives attract 2 negatives as H2 to become H2O to create Clemenian Metalicized Water inside of metallic diamond suns that spills out at the next Clemenian Supernova. That's proven by a negative times a negative is a +. So, our last Clemenian Cosine Crossover already had temperature "not dot", ., 0, minus, and plus, so it added - and + that attract to each other in zeros simultaneously is how I know + was pulled into 0 for fusion. Now our fused zero list is temperature "not dot" to dot, . to temp 0, temp 0 to zero, minus to zero, and plus to zero which all make changes to atoms made of math features i.e., [2.5 billion years(pre-helix, + and - "not dots" form)+10 billion years(helix1,fused "not dots" to dot becoming visible at -7,500 degrees)+10 billion years(helix2,fused dot to temp zero)+10(helix3,fused temp zero to zero)+10(helix4,fused - to zero)+4.567(helix5,fused + to zero=today)=47.067 billion years. The 6th helix fuses 1 plus and 1 minus attracted together in zero (using magnetic logic) to be recorded permanently then on with each Clemenian Crossover fusing more and more to 0 every time before it can take no more and...

Time&Universe DNA Solved

clemenscomet.com/time%26universe-dna-solved

CLEMENIAN SUPERUNINOVA!!!

Like a dandelion creating new Clemeniverses everywhere 10,000 degree hot particles land on -10,000 "not dots" filling space besides time and universe DNA, a Clemenian Superuninova occurs as metallic diamonds become unstable and they all supernova simultaneously creating new time's DNA throughout all of space with new Clemeniverses. "Not dots" are really small at -10,000 so dividing our universe by "not dots" would create unimaginable numbers of DNA/universes like we're living inside another creature's DNA and they're growing. Could you imagine an entire universe inside your DNA with people driving to work polluting you like cancer? That's weird to think about, but we are on the rungs of a single DNA chain where we can assume there are as many DNA in space as in our bodies 1 billion times our size which would be a massive creature; perhaps our helix is one of quadrillions in a dinosaur that lives on a planet in a universe as DNA inside another dinosaur. We may never know beyond what I solved.

The final Clemenian Math representation of the entire Time and Universe DNA strand appears from beginning to end as:

[10 columns of "not dots" for 2.5 billion years],[7 columns of "not dots"]750.0000000000.0000000000.0000000000.0000000000.0000000000.0000000000.0000000000.000000.0000000000.0000000000.[DEATH BY CLEMENIAN SUPERUNINOVA]

E=MC2 vs. E=MCT POSTHUMOUS CLEMENIVERSE ANALYSIS:

- CALCULATE ENERGY BY THE SECOND FOR THE ENTIRE DNA AS: TIME'S DNA=(10 to the 10th) to the 10th or (10,000,000,000) to the 10th and C=189,000 AS IN $E=((10,000,000,000) \text{ to the } 10\text{th})M$ 189,000=18,900,000,000,000,000,000,000M or
- CALCULATE ENERGY BY THE SECOND FOR EACH HELIX: TIME'S DNA=10 to the 10th or 10,000,000,000 and C=189,000 AS IN $E=(10,000,000,000M)189,000=1,890,000,000,000,000M$ and
- SUBTRACT ENERGY FOR A RUNG (9) FROM A RUNG (10): TIME'S DNA=9 to the 10th or 9,000,000,000 and C=189,000 AS IN $E=(9,000,000,000M)189,000=1,701,000,000,000,000M$ AS $RUNG10(1,890,000,000,000,000M) - RUNG9(1,701,000,000,000,000M) = 189,000,000,000,000M$ **per rung** or
- CALCULATE ENERGY AS E=MC2=MCC: $E=MxCxC=189,000X189,000M=35,721,000,000M$.
"USELESS!"

THIS PROOF SET SHOWS E=MCT WHERE T=TIME IN SECONDS, NOT E=MC2 or MCC.
Sorry, Einstein.

The -"not dot" crystal lattice and +"not dot" metallic lattice were fused together at 0 to form Einstein's spacetime plane as a fabric in time that stretches instead of breaks as shown on

Time&Universe DNA Solved

clemenscomet.com/time%26universe-dna-solved

my Clemens' Octahedral Electromagnetic Solar System
<https://img1.wsimg.com/isteam/ip/4630a99d-972c-45c4-a561-29df1625aa65/Figure%2030%20Octahedral%20Solar%20System-0001.jpg?rs=w:1280,h:1024>) and seen in many Planck pictures as hollow bands through the clouds of dust leading to black (-) and white (+) holes. Therefore, +T1 and -T2 are traveling at the speed of light on the outside of the universe causing the Higgs boson to grow the universe's metallic diamond until it maxes out at 5 billion years old of 10 to the 10th or 10 billion years on each helix. Our current Clemeniverse is a single twist in time's DNA held between +T1 and -T2 while time's DNA outside holds all 5 universe physics realms/DNA helices our universe went through.

The Clemenian DNA Chain gets 10 twists as 1 for each Clemeniverse before death at 100 billion-years-old just like a person accept people get 10 years on each helix with 1 year between DNA rungs and humans only get 10 helices to live to 100 years-old before their final Clemenian Crossover kills them. But, as the helix closes in on the final Clemenian Crossover of Clemenian DNA chains, a lot of people die mid-eighties. You have to be very healthy to survive each Clemenian Crossover in your DNA as people get older and weaker making them susceptible. Disease weakens DNA so a Clemenian Crossover every 10 years with disease in your DNA isn't good as your DNA prepares to reverse polarize for the next 10 years. There must be as many universes as there are galaxies since these temperature "not dots" to dots to temp zero to zero to negative to positive occurred throughout all of space and universes can therefore collide and explode into unlimited numbers of Clemeniverses. And we only discussed what's inside a universe because Clemenian Crossovers don't affect outer space other than more Higgs boson from the cold to the heat. Therefore, outer space is still primarily temperature "not dots" where it's occupied by DNA strands and pressure due to a googol of growing universes pushing space outward. If you shine a light into outer space, it will appear black as there are no photons, protons, neutrons, electrons, or room service and no Einstein spacetime grid; only universes on time's DNA get these amenities; and there are a lot. We've learned the Quantum Physics but what are the Quantum Mechanics on birth of time's DNA?

creation of dot fused to zero over a 10 billion-year period which is the first atom created hot off the DNA printing press. At 1 second, my atomic clock shows the universe quadrupled in size with another Clemenian Supernova and kept quadrupling every time. That's because there are 4+ auxiliary energy lines (and 4-) that are causing the universe to quadruple at each Clemenian Crossover due to Higgs boson processes on the outside of the universe resulting in dark energy. And this kept happening over and over in my atomic clock until we get to our new Clemenian Crossover 4.567 billion years ago in our newly "flashed" universe helix. My math and 15 Keys to the Universe proved there's only 1 way this occurred and Einstein proved mathematically his spacetime plane is the fabric of time which I verified with a grid connected to time's energy on the outside of the universe causing universe zapping. It's also very good at transmitting electricity. Good job, Einstein!

Finally, scientists say they can see 47.067 billion years back in time while I accounted for 2.5 billion years of temperature "not dot" planes coming together at zero time to begin the universe plus 44.567 billion years. **OME7 Dinosaurs were assassinated @Clemeniverse age=44.501 billion years starting the 4th DNA rung as humans and all life dies on the 5th rung of the 5th helix at 45.501 billion years-old showing rungs are 1 billion years apart again-see Code of Life and Blueprint for Life where impacts went from 1 to 1.5 billion years apart back to 1 billion years between rungs 4 and 5.** Our Clemeniverse is 44.567 years-old in human years. That means scientists can see 2.5 billion years beyond our 5 helices before the "not dot" planes came together, which means it took 2.5 billion years to form the -10,000 and +10,000 "not dot" lattices before they came together at 0 time. Below is my Clemenian Math representation of what scientists see today with the "not dot" lattice creation noted in braces []. **It took +or- "not dots" 2.5 billion years to form dots and 10 billion years to form a temporary 0 per multiple math calculations including E=MCT herein.** Using my new E=MCT formula, I calculated the first "not dot" in the pre-helix as $44.567 \text{ billion years} / 189,000 / 365 / 24 / 60 / 60 = .000000748$. (to the left of the dot is 8 in tenths, 4 in hundredths, and 7 in the thousandths and rounded up/down as a limit only in the hundredths for +or- 7,500 degrees as dot is 10X). **This is 47.067 billion years from today as seen by scientists** (braces=temperature "not dots" to dots physics realm):

[25.....].[.....]750.0000000000.0000000000.0000000000.0000076540.

[2.5 billion years(pre-helix, +- "not dots" form)+[10 billion years "not dots"] (fused to dots to become visible at +-7,500 degrees)+10 billion years(helix2,fused dot to temp zero)+10(helix3,fused temp zero to zero)+10(helix4,fused - to zero)+4.567(helix5,fused + to zero=today)=47.067 billion years.

FUTURE: Helix6=fuses +- to zero, Helix7=fuses +-+ to zero, Helix8=fuses ++++ to zero, Helix9 fuses ++++ to zero, Helix 10 fuses death signal to zero as ++++ as zero can't hold >10 = Clemenian Superuninova.

Time&Universe DNA Solved

clemenscomet.com/time%26universe-dna-solved

IN CONCLUSION...[AMAZING MATH PROOF OF ORIGINAL UNIVERSE BIRTH SIZE]

I recall Leonard Susskind debunked Stephen Hawking and I thought I'd never be in a position to have every single physicist, scientist and space freak trying to debunk me and my physically proven discoveries as a self-learned astrophysicist. Imagine if they named all my discoveries after me. Imagine we all come back every 10 billion years 5 more times. I'm ready with physical proof of it all, super scientists, physicists, and space nuts!

In my math graph at the top of the page, I show life exists between rungs 1 to 5 (5.5 due to time not being constant) while human females give birth between their rungs 1 to 5.5 (age 10 to 55) as well making this a **female Clemeniverse DNA and life in every galaxy could be DNA genes or hormones as they disappear in a 55-year-old woman who's no longer fertile**. Do humans have universes on their DNA with 2 vs. 10 energy beams as their DNA is 10 to the 2nd vs. 10 to the 10th with 10 energy beams? This is where a great astrophysics forensics auditor and math whiz cross foots the totals to verify the math to proof it all including verifying the correct helix/physics realm we're in today is the fifth realm and all sizes are correct. First, looking at my Atomic Clock we see the Higgs boson column expanding the metallic diamond and dark energy by a factor of 4 at every Clemenian Supernova and we know today's universe is 10 billion light years across in the fifth realm. Therefore, the Clemenian Math to proof the beginning size in the pre-helix is [5th (+) helix realm] universe of **10 billion light years/4=[4th (-) helix realm] 2.5 billion light years/4=[3rd (perm 0) helix realm] 625 million light years/4=[2nd (temp 0) helix realm] 156 million light years/4=[1st (.) helix realm] 39 million light years/4=[10th ("not dot to dot") realm] 9.75 million light years/4=[9th ("not dot to dot") realm] 2.4375 million light years/4=[8th ("not dot to dot") realm] 610,000 light years/4=[7th ("not dot to dot") realm] 152,500 light years/4=[6th ("not dot to dot") realm] 38,125 light years/4=[5th ("not dot to dot") realm] 9,531 light years/4=[4th ("not dot to dot") realm] 2,383 light years/4=[3rd ("not dot to dot") realm] 596 light years/4=[2nd ("not dot to dot") realm] 149 light years/4=[1st ("not dot to dot") realm] **size of 37 light years/4=[pre-helix ("not dot") realm] size of 9.25 light years across**. That's 9.25 divided by 10 (of 10 X 10 "not dot" grid) to prove each "not dot" was about 1 light year apart. However, there are 15 more to go due to in the beginning there wasn't enough temperature of 100,000,000 degrees celsius for fusion of DNA rungs or Mark's Metallic Diamond on the outside of the universe. Once fusion is achieved after the first 10 near collisions of Time1 and Time2 as it kept crossing over back and forth growing at 4x with each pass of each other, then fusion allows for the first 5 pre-helix rungs to begin for a total of 15 Clemenian Crossovers resulting in 4x growth each time as calculated thus far heretofore:**

(#10 pre fusion TO FUSION at 100,000,000 degrees pre fusion size of 3.3125 light years/4=

Time&Universe DNA Solved

clemenscomet.com/time%26universe-dna-solved

[#10 pre-fusion TO FUSION at 100,000,000 degrees, pre-rung] **size of 2.3125 light years/4=**
 [#9 pre-fusion of 10,000,000 degrees, pre-rung] **size of .578125 light years/4=**[#8 pre-
 fusion of 1,000,000 degrees, pre-rung] **size of .14453125 light years/4=**[#7 pre-fusion of
 100,000 degrees, pre-rung] **size of .0361328125 light years/4=**[#6 pre-fusion of 10,000
 degrees, pre-rung] **size of .009033203125 light years/4=**[#5 pre-fusion of 1,000 degrees,
 pre-rung] **size of .00225830078125 light years/4=**[#4 pre-fusion of 100 degrees, pre-rung]
size of .000564575195312 light years/4=[#3 pre-fusion of 10 degrees, pre-rung] **size of**
.000141143798828 light years/4=[#2 pre-fusion of 1 degree, pre-rung] **size of**
.000035285949707 light years/4=[#1 pre-fusion of 0 degree, pre-rung] **size of**
.000008821487426 light years.

I convert that to 278 seconds but need to get it back to 1/2 second where you drew your circle. Scientists measure the universe at 9.133 billion light years across, but they don't consider the width of Mark's Metallic Diamond that nobody knew about at 433 million light years thick on either side for a total thickness of 10 billion light years. Now that we have fusion, we can begin creating our 5 pre-helix rungs (recall all DNA pictures show the pre-helix is only a half-helix whilst a full helix has 10 rungs). Now, let's back off those 5 pre-helix rungs as follows:

[#1 pre-fusion of 0 degrees, pre-rung] **size of .000008821487426 light years=**[#5 pre-helix
 rung] **size of .000002205371856 light years/4=**[#4 pre-helix rung] **size of**
.000000551342964 light years=[#3 pre-helix rung] **size of .000000137835741 light years=**
 [#2 pre-helix rung] **size .000000034458935 light years=**[#1 pre-helix rung] **size**
.000000008614733 light years=.27 seconds matching the circle you drew. AMAZING!

Recall when I had you draw the circle on the 3 x 3 Clemenian Crossover Dot grid and the circle was half drawn at 1/4 second as the non-mass particle was magnetically attracted to Einstein's spacetime plane at 2 outer points on the middle row. Then at .27 seconds it repulsed as a particle with matter (that's why this math came to exactly .27 seconds as I crossfooted in 3 directions). Time was the same in every Clemenian helix/physics realm but distance grew at 4X each time. This also perfectly matches the calculation in my fusion energy formula $FE=2T2C$ at .001 seconds when $E>1$ as $FE=2(.001)^2(300,000)=1.2$. Since FE is greater than 1, that means the conservation of energy demands the next level of creation which is giving mass to non-mass photons which is why scientists have huge colliders attempting the same feat when they found the God particle. I therefore discovered God's DNA physically and mathematically. This all matched my 100% accurate atomic clock that applies to all helices, especially at 0-1 seconds when non-mass particles gained mass to create the beginning of God's DNA and our universe.

Since $E = mc^2$ is greater than 1, that means the conservation of energy demands the next level of creation which is giving mass to non-mass photons which is why scientists have huge colliders attempting the same feat when they found the God particle. I therefore discovered God's DNA physically and mathematically. This all matched my 100% accurate atomic clock that applies to all helices, especially at 0-1 seconds when non-mass particles gained mass to create the beginning of God's DNA and our universe.

Fusing zero to zero was zero weight and fusing minus to zero was zero weight. Fusing plus to zero was negated by temperature "not dots" fused in dot with dot fused in zero with minus fused as well but more complex atoms, gases, and elements can now form. Fusing +- to zero adds no weight as they balance out. Even the Clemenian DNA Death Signal of ++++- ---- being fused to zero in the 10th rung adds no weight to 0 but it can't hold 11 items so 0 is out of space and Clemenian DNA dies like a train running out of track.

OUTER SPACE OUTSIDE THE CLEMENIVERSE: The entire Clemenian Time and Universe DNA was 3-D before it fused anything to zero and time began which means space has the same 3-D planes filled with Clemeniverse DNA X10 Clemeniverses possible in each. There are dinosaurs, humans, plants, and life in general filling outer space with our DNA.

Debunk away, fellow DNA!!!
