

The Original DASHDODGER®

The Dashdodger® is a novel accessory for your vehicle's dashboard that offers a selection of models to personalize your drive and its 100% MADE IN THE USA!

The unique and patented design uses G-forces created by driving your vehicle to move the Dashdodger® bringing your drive alive!

The Dashdodger® mimics and exaggerates your vehicle's movement. As you turn, it will lean as if it's banking in the corner. As you accelerate, it will tilt backwards as if it's climbing. When you brake, it tilts forward as if it's diving. And best of all it installs in seconds with a removable adhesive pad and requires no batteries!

See the Dashdodger® website for more details and a video of it in action at www.dashdodger.com.

Models to choose from:

BIRD

UFO

Sea Turtle

FIGHTER JET

Butterfly

UFO (shown in package)

And more models to come!

Find the ideal mounting location

With the vehicle parked on a relatively flat surface, set the Dashdodger® in a spot that doesn't obstruct the operator's view and test that the swivel/rotating mounting foot (mount with the adhesive pad which rotates and swivels for alignment and fitment to contoured surfaces) will allow for the Dashdodger® to be mounted level.

Mount swivels and rotates

While holding the base, move the Dashdodger® toy around to ensure that it is not obstructed by anything around it as it moves, such as the windshield or elevated infotainment screen.

Mounting

Clean the chosen mounting location of dust with the provided wipe located in the bottom of the box.

When cleaned area is dry, holding the Dashdodger® base, remove the backing paper from the adhesive pad and press the Dashdodger® firmly onto the prepared surface.

Holding the Dashdodger® base, rotate it until the toy is facing directly forward and then swivel it until the base is level left to right and front to back and toy rests horizontally.

Note: If below freezing, run vehicle's heater until the mounting surface is warm to the touch to ensure proper adhesion.

Enjoy your Dashdodger®!

Always use in accordance with local laws and never mount the Dashdodger® in a location that would distract or block the view of the operator.
