**We don't simply respond to building  
security trends – we set them.**

# **SIMPLIFY ACCESS & CONTROL**

---

**INTELLI-SITE 4.0**

**One elegant solution for your  
complex security needs.**

# INTELLI-SITE 4.0

Intelli-Site 4.0 is a next-generation software that takes multiple building security systems and aggregates them to deliver one control and alerting center. It's a powerful solution that's surprisingly easy to use. Thanks to an intuitive graphical user interface, OSSl is the most user-friendly system in the industry.

## Easy to Program

*Build custom reports, graphical user interfaces, and rules for your site – without the need for custom code.*

## Flexible & Scalable

*Intelli-Site 4.0 can start with two doors at one building, and grow to 1,000 doors at 100 buildings – or more.*

## Easy to Use

*Intelli-Site 4.0 uses smart design to create a security solution for the everyday end user.*

## 100+ Technology Partners

*OSSl works with many technology partners, so end users can integrate any new or existing hardware.*

## Benefits for End Users

- Easily create alerts and rules
- Run standard / custom reports
- Manage user access control through Microsoft Active Directory® rather than input details about users and buildings manually
- Monitor on-location or at a control center
- Scale up quickly when more buildings are added or functions are needed

## Intelli-Site for Access Control

Intelli-Site 4.0 AC is designed exclusively for access control. End users pay only for access control functionality with the AC version. When desired, the solution can scale up to satisfy more complex integration needs.

## OSSI is Your Security Partner

OSSI engineers are present at every stage of the project development process:

### Spec & Bid Support

OSSI is a resource as you design a solution to meet your exact needs. For the most complex projects, OSSI can do custom programming, in-house. We can also help submit our solutions as an equal or alternate.

### Pre-Install Training

OSSI is a company that's easy to work with, and Intelli-Site is the industry's best solution. We'll quickly help your technicians become expert users.

### Technical Support

OSSI has the industry's best technical support. Reach out to our developers or technicians for help during a proposal or to troubleshoot an install.

## Primary Applications

- Prisons / Jails
- Education
- Courthouses
- Airports
- Government
- School Districts
- Hospitals
- Manufacturing

## Peace of Mind with Our Software Maintenance Agreement

The security industry moves quickly, and OSSI wants you to be on the leading edge. The Software Maintenance Agreement (SMA) helps your solution stay ahead of trends – and threats.

It includes:

- Unlimited software updates (bug fixes, feature updates)
- Priority phone support
- Software transfer (in case of a computer crash)

At the end of the day, OSSI has you covered. Automatically get a 1-year SMA when you invest in any OSSI solution.

# HARDWARE

## **Compass: Industry-Standard RS-485 Board**

OSSI Compass boards have an advanced circuit board design, with a high speed Rabbit™ processor, and surface mount component technology. Compass boards can achieve nearly limitless capability within an extremely small footprint.

## **MAC: Smart Board for High-Risk Applications**

OSSI MAC boards use the LonTalk® protocol to allow Intelli-Site to report real-time on network activity. MAC boards also support peer-to-peer communication, Programmable Logic Control (PLC) ladder logic, and have a drag-and-drop programming interface.

### **Unbeatable Product Quality**

OSSI builds Compass and MAC boards, giving us direct control over product quality and manufacturing speed. Boards are triple-tested before delivery to the end user, leading to guaranteed field functionality.

**West Valley Detention Center**  
*Rancho Cucamonga, CA*

**West Valley needed a way to bring its jail  
management system, video feeds, and access  
control into a single dashboard.**

# CASE STUDY /01

## West Valley Detention Center

Rancho Cucamonga, CA

**The West Valley Detention Center (WVDC) is one of the largest county jails in the State of California. With 16 housing units, 400+ cameras, and a total bed capacity of 3,347, the facility needed a security solution that “was more than just controls.”**

Kenny Hansen, Facility Project Manager at WVDC, led the search for an integrated security solution. His first priority was to successfully integrate WVDC's Jail Information Management (JIM) system. He was also looking for the ability to pull up inmate photos.

“When you're doing counts at the facility, and using a remote video feed to verify that all inmates are in the facility,” Hansen said, “you need to be able to say that the guy on the screen is who he should be, the right inmate.”

Hansen discovered that most security solutions couldn't perform that key task – until OSSI.

With the OSSI solution, his guards can select a section or housing unit, see the camera view on screen, and view the desired inmate photo.

“We're really pleased with the JIM integration,” Hansen said. “Now you click on a cell, and it shows you who is in that cell. You don't have to look up people. It's a quick reference.”

Hansen is also pleased with some of the custom features in his system. WVDC can put a cell on isolation, so there's nothing you can do to open it until you take it off isolation. The facility's classification unit can also flag a high-security inmate. In the system, there's now a red ring around that cell, so other users automatically know it's high-security.

**“It's faster and easier,” Hansen said. “It's also safer.”**

In all, WVDC has networked a total of 35 areas, including 16 housing units plus administrative units, booking areas, and control booths.

“We're trying to standardize on OSSI for every JIM system that we switch over to. We want to be able to use this software on everything.”

**Racine Unified School District**  
*Racine, WI*

**With 35 buildings and 5,000 employees, the Racine school district was looking for a simple way to manage access control.**

# CASE STUDY /02

## **Racine Unified School District**

Racine, WI

**Racine Unified School District (RUSD) is a 20,000-student school district located in southeast Wisconsin. The district uses OSSI for access control and camera integration at 35 buildings across 150 sq. mi.**

OSSI helps RUSD monitor and control more than 400 doors, and connects with a Milestone video solution that supports 569 cameras. That platform also gives RUSD the ability to send real-time video to police vehicles via Wi-Fi.

When the police respond to an incident, officers can instantly stream video from the school's cameras. OSSI's integrated solution means personnel have total situational awareness, and can quickly respond to the incident.

Ryan Fournal, Systems and Operations Supervisor at RUSD, said that the OSSI security solution has "simplified things" for the district. Fournal, who oversees building automation and security, also uses the OSSI software to add users and update permissions.

The district's roughly 5,000 employees all have credentials with custom access permissions based on work hours, work location, and job requirements.

"The platform is very user-friendly," Fournal said. "With new employees or terminations, card access can be added or deactivated quickly."

**In the future, RUSD may integrate the system with additional hardware that will allow them to respond to active shooter situations or lockdown events.**

As school security trends demand increased preparedness for a variety of events, Fournal and his team depend on OSSI to keep students safe.
