

iCruisePro

iCruisePro is a complete timber inventory application for your iPad, iPhone, or Computer. The software allows you to collect field data, workup the job immediately on your mobile device, and create final Stand and Stock tables. You can e-mail or text those reports from the field to anyone you choose. Everything can be done on your mobile device. A desktop version is also available. It is very simple to use, flexible, customizable and affordable. Developed by timber cruisers - for timber cruisers. Demo version is available upon request.

"iCruisePro is the most user friendly and easiest to learn timber cruise program our company has ever used. One of the greatest features is being able to quickly work-up your inventory in the field once you are finished cruising and having the capability to export/email reports instantly from the iPhone/iPad platform. Having a program that runs on the iPhone/iPad also allows you to use other apps needed during cruising, such as GPS apps, so that you only have to have one device in the field."

Charlie Edwards, Echo Forestry
